

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

NOTICE.—The BANKERS' MAGAZINE having been consolidated with RHODES' JOURNAL OF BANKING, the volume number of the former only is retained.

BOUND VOLUMES.—Beginning with July, 1905 (consolidation of the BANKERS' MAGAZINE with the JOURNAL), the volumes comprise the numbers for six months.

Price, bound in cloth with leather backs and corners, \$3.50 a volume. By mail or express, prepaid, 40 cents additional.

THE BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SEVENTH YEAR.

JULY, 1903.

VOLUME LXVII, No. 1.

THE ALDRICH BILL will require careful consideration and amendment before it is permitted to become a law. In his address before the recent convention of the New York Savings Banks Association, Mr. HORACE WHITE called attention to a feature of the bill that is open to criticism. Mr. WHITE said:

"The Aldrich bill deals with the bank-note question in still another way. It allows the Secretary of the Treasury to suspend and resume the redemption of National bank notes at Washington at his own pleasure. Under existing law a redemption fund equal to five per cent. of its outstanding circulation must be kept in the Treasury by each note-issuing bank. Anybody may send bank notes in bulk to the Treasurer of the United States for redemption, and they must there be sorted, redeemed out of the five per cent. fund and returned to the parent banks. The cost of sorting and transporting must be defrayed by the banks issuing the notes and each one must keep its five per cent. fund replenished. The Aldrich bill does not propose to stop redemption of the notes by the Government, but it provides that the Secretary of the Treasury, after redeeming them, may pay them out for Government dues instead of sending them home. One of the chief defects of our present system is the sluggishness of the redemption of National bank notes. This section of the bill proposes to make it still more sluggish, but that is its least objectionable feature, since it would give the Secretary control of the reserve fund of every note-issuing bank in the Union, and enable him to 'put the screws on' and take them off at his own will. Their redemption fund in Washington is a part of their cash reserve. Ordinarily one-quarter of their circulation will be sent to Washington for redemption each year. If the Secretary can say to the banks: 'Until I give the word you need not redeem any of your note issues except such as are presented at your own counters,' his powers, both financial and political, will be much greater than they are now, or ever ought to be."

In the opinion of some careful observers the inelasticity of the present currency of the country is due as much to the imperfect methods of redemption as to any other cause. The anomalous position of the silver coin and certificates, the volume of legal-tender notes fixed by law at a sum which is neither increased nor diminished, and the lack of a rapid commercial redemption of the National bank notes, all tend to cause this inelasticity about which there is so much complaint. There is, in fact, a growing feeling that the movement to secure an elastic currency, which in itself is quite commendable, is in danger of being subverted to meet the demands of those who simply desire a greater volume of money. It is also alleged that under the pretext of providing more money to move the crops an expansion of the currency is to be brought about chiefly to sustain the inflated values of the mass of "undigested securities" on the market. The recent fall in the prices of stocks, particularly those known as "common," indicates that a number of these securities are in need of a tonic. But it is substantial value that they require rather than such temporary assistance as they might derive from an inflation of the currency.

As THE BANKERS' MAGAZINE has urged for many years, the principle of an asset currency is sound enough, but the application of that principle under all the circumstances at the present time is exceedingly difficult, and if any provision for redemption is to be adopted similar to that contained in the Aldrich bill, or in the Fowler bill as finally amended, it would be better to postpone the whole matter until public opinion can be brought to the support of a thoroughly sound measure.

By providing for redemption in "lawful money" the expense of maintaining gold parity is shifted from the banks and those who deal with banks—where it properly belongs—to the whole body of taxpayers—where it does not belong. But the blame for the present situation does not rest with the banks, but with Congress for keeping the legal tenders in circulation and in coining two kinds of full legal-tender money of unequal value.

The gradual conversion of the legal-tender notes into gold certificates (which may be done without a bond issue and without contraction) is a step that should properly precede the introduction of an asset currency, and when that is done some provision will have to be made for keeping silver exchangeable with gold, as the legal tenders are now practically the bridge that links the silver currency to the gold standard.

Unless the prompt redemption of an asset currency is made certain, a large permanent addition to the supply of currency would ensue and prices would be artificially buoyed up. The high level of prices

and the large exportation of gold would seem to point to a present redundancy in the volume of currency.

Mr. WHITE's address, to which reference has been made, was printed in full in the June number of the *MAGAZINE*. It is one of the most lucid and thorough presentations of the principles of an asset currency that we have seen, and is worthy of a careful reading by all who are interested in the currency question.

THE INTEROCEANIC CANAL matter seems to be hanging in the air, waiting for the action of the Congress of Colombia. If this is delayed beyond reason, and it becomes impossible to secure the Panama route, the President, under the terms of the law, will be constrained to open negotiations with Nicaragua. There is undoubtedly a large faction who for various reasons prefer the latter route, but the general sense of engineering opinion seems to be in favor of Panama.

It is barely possible that the chaotic government of Colombia may render this last-named route impracticable for the United States. The probabilities are, however, that some way out of the present muddle will be devised. Already there are rumors that the Panama section of the Colombian Republic is inclined to secede and make terms for itself with this and other countries, and intimations, whether inspired or not, are being circulated in the daily press that this country might be inclined to avail itself of such a situation. The country has a precedent in the recognition of the secession of Texas from Mexico. There is probably an opportunity for American intriguers and ex-filibusters, who have always thriven to a certain extent on the troubles and disorders of the States of Central America, to do something with a secession programme. The Government of this country would wish to avoid any course which could not be sustained from an ethical or moral standpoint. A move for secession on the part of Panama, whatever else its result, would tend to hasten action by Colombia.

The interest from a financial and banking standpoint in the construction of the canal comes in two ways. If Colombia accepts the terms and the Panama route is finally acquired, there is the payment of forty millions to France to be provided for, followed by extensive bond issues for the construction of the canal. It makes much difference to the business public at what season and in what conditions of the money market the payment for the canal properties of the French company is made, especially under the present currency and banking laws and customs. The remittance will have a greater effect on business when the demand for money is great in the home

market. If the settlement is delayed and made in the fall, when the crops are to be moved, it may cause stringency in the money markets. Such trouble in the autumn is always apprehended, and it has been freely prophesied that the failure of Congress at the last session to pass any measure of relief will be seriously regretted next fall. But to a certain extent the hands of Congress have been withheld from making any move, because of the extreme probability of bond issues for canal construction. It must not be forgotten that this undertaking, while an eminently peaceful one, will be as much of a drain on the country's resources as a very considerable war. It will cause a boom in the furnishing of supplies and machinery and an opportunity for contracts equal to the war with Spain. The hygienic conditions of the route will require a maintenance of a discipline which will be practically military. The country may find it necessary to maintain all its reserves of credit. If Congress had abolished the bonded bank-note system in favor of an asset currency, the price of bonds would undoubtedly have fallen. If it should authorize the use of State, municipal and railway bonds for public deposits, a similar effect would follow. It is not necessary to consider the further effect of such a measure in encouraging the extravagance of municipalities, but it is not unreasonable to apprehend that if either of these measures should become law it might be found impossible to sell the two per cent. canal bonds at par. Moreover, a check might be given to the sale of investment securities of all kinds were the United States States bonds now held by the National banks to secure circulation and public deposits thrown on the general investment market.

Until the construction of the canal is settled, either for or against, it cannot be expected that radical changes in the monetary system can safely be attempted. Furthermore, the issue of the canal bonds will for a time, and perhaps for a number of years, give a needed relief by extending the basis of the present National bank currency. Government securities in all nations are not as superior to other opportunities for investment as they once were, and nations may see as much reason to nurse their credit in time of peace as they formerly did under the pressure of war. If the Panama scheme falls through there will be a longer period of uncertainty. Nicaragua comes on the stage, and negotiations, the preparation of treaties and their ratification all require time.

It is, therefore, not difficult to conclude that the prospective construction of an interoceanic canal by the United States is having an effect upon the business interests of the country. It is the same as if it was known to almost a certainty that the country within the near future would be involved in a war of sufficient size to largely increase the national debt. It is, however, contended by some that it is

unnecessary to issue bonds for the construction of this canal, that the Government should use its surplus revenues for the purpose. It is possible that this might be done successfully, but there is an element of uncertainty in such an undertaking. No one knows what may take place to reduce the revenues or increase the expenses. Surplus revenues now sooner or later go back to the country. Payments in Panama or Nicaragua would not come back in the same degree. It is much better to separate the funds for the canal from the other funds and expenses of the Government. Confusion of the ordinary revenues with the expenses of the canal might give rise to many opportunities for misuse of funds. This would be in addition to the dangers caused by the chance that there might not be a surplus revenue when it was most needed.

On the whole, it is believed that the existing uncertainty as to what will be done about the interoceanic canal has a depressing effect on the business of the country in that it has prevented decisive action for the improvement of the currency, and that thus indirectly apprehensions for the future are increased which chill the confidence without which the most favorable material conditions invoke prosperity in vain.

THE CROP PROSPECTS are not at this time as encouraging as they were thought to be a month or two ago. The season has been cold and backward; in some sections drought has prevailed and in others there have been floods. Winter wheat has been injured, and there has not been the acreage of spring wheat that was expected. Corn has been retarded in the planting by the bad condition of the ground due to floods and cold weather. In fact, the present outlook is far from good, and in so far as the future prosperity of the country is dependent upon the crops there is some apparent ground for discouragement. Cotton prospects, as far as the season's yield is concerned, have been clouded by the weather in much the same manner as the prospects for the cereals have been affected.

It is, however, the custom to discount every event in advance, and traders who care little for anything except the immediate results of their deals are not as yet much dismayed.

The bad outlook here for wheat has not raised prices, because the reports from abroad are more favorable than they were earlier in the year.

Those who attempt to predict a season's outcome are apt to prove mistaken in their prophecies, or if the results are as foretold they may be convicted of ignorance because success or failure has not been the consequence of the reasons alleged by the inspectors of the future.

It is a fact that very few seasons progress altogether favorably. There is a tradition among farmers that once in a while there arrives what is called a lazy man's year, when every crop grows and thrives because all conditions are from beginning to end auspicious.. These years do not happen very often, although patriotism may claim that they occur oftener in the United States than anywhere else. This season's record so far points to the fact that this is not one of those years of plenty, when bounteous Nature of her own free will relieves the tired muscles of the agriculturist.

Whatever truth there may be in this theory of especial years of plenty, it is usual for the weather to so average up throughout the whole season as to enable farmers to obtain good crops even when floods and droughts and lack of sunshine seem to hold back vegetation during the usual growing period. There is plenty of time yet for a successful agricultural year. A late and backward spring is often compensated for by a long continuance of summer into the autumn months. Nature possesses vast powers of recuperation and often more than makes good destruction that seems without a possibility of reparation.

It is doubtful whether predictions based on the reports which are so carefully gathered from all parts of the world as to the condition of the staple crops, are ever of any value except for the day. Those who collect these reports and receive daily the news as to how the crops look, and send out their abstracts of this news to the exchanges, are perhaps like the fly on the chariot wheel, tempted to think that they are the motor that makes all things whirl. The individual farmer who inspects his growing crops every day and sometimes hourly and constantly, can draw no sound prediction of what the end will be. He can note changes for the better or the worse, but good fortune may come in a chance shower, or bad in a blight or invasion of some insect terror. On a large scale this kind of observation tells how deficiencies and losses in one place are made up by favoring conditions elsewhere. After all the report is but for a day. Till the season is ended there is nothing to rely on, except for those who make the rumors of the day the basis of their temporary speculation. The real prosperity of the country depends not at all upon the passing opinions of the bulls and bears who seek out of incomplete information to guess whether prices will rise or fall a point.

The real value of these crop reports, like that of any information lies in their completeness, and they are of great use in giving all producers the fairest possible chance to receive correct equivalents for their products. If too much relied on in speculation these reports of a crop's progress may prove very deceptive. Any one dealing in American securities who was led to optimistic views, and paid high prices

because two months ago crop prospects were unclouded, and would, now that floods and drought and lack of sunshine have clouded these prospects, be willing to sell at a loss, in each case would be equally foolish. When the reports of each crop are complete with the record of the harvest, then alone can it be known what is added to the real resources of the land. It makes no difference what the intervening opinions have been or how prices have been affected by reports, favorable alternating with unfavorable, the result in the aggregate wealth of the country will be the same when the crop finally comes to market.

The general tendency of this daily forming of new opinions as to prices in the grain exchanges based on daily reports from all agricultural sections, is to equalize prices. No rumor or report can usually continue long until it is contradicted or modified by another. Bad reports from one section are checked by good ones from others. The losses and gains which traders make by backing their temporary guesses do not increase or diminish the resources of a country to any perceptible extent. It is also doubtful whether speculation, even in the most extravagant forms, is at all injurious to the real industrial and agricultural interests. The realities remain little affected by it.

While as far as this MAGAZINE is concerned it was believed that the crop reports of the earlier months of the year were likely to prove too high colored and that the chances were against the continuance of such bright prospects, it is now thought that opinions are swinging too much to the other extreme. The wet weather of the present season has not been nearly as unfavorable as that of last year. Rains, where rains have prevailed, have been followed by more wind which, with the absence of too great heat, has left plant life in a better condition for future growth when the summer heat does arrive. There has been little of the hot moist weather that did so much damage last season. In fact, there is as yet no reason to seriously apprehend any great falling off in the staple crops of the year from anything that has yet happened.

THE BASIS OF ALL SUCCESSFUL TRADE is honesty and fair dealing; at least, this trite proposition is assumed to be true by all writers on political economy. Moralists, while recognizing the weaknesses of humanity as displayed in individual conduct, have fallen back with confidence on the fact that the common sense of mankind recognizes the advantages of fair dealing as a policy. "Honesty is the best policy," is a time-honored proverb. Economists, in formulating the natural laws controlling business, take little note of aberrations that are caused by dishonest methods. They assume that such methods

are sure to evolve their own cure. The developments of modern business by corporations and combinations have shaken, if they have not altogether overthrown, many economic theories, and the organization of labor on the large scale witnessed in modern times has similarly upset many of the hard and fast assumptions in regard to the effect of the laws of supply and demand on the labor market. Political freedom enters into the problems with increasing importance. Combinations, either of capital or labor, cannot attain any great effectiveness where the powers of government can exercise arbitrary control. Ancient monopolies were powerful because they derived their strength from the support and backing of government. Modern monopolies flourish because they are free from government control. Individuals who possess political rights cannot be oppressed by arbitrary government. Modern combinations, either of capital or labor, obtain most of their power and vitality from the political and legal rights of the units of which they are composed.

Whether it be true or not, as is frequently alleged, that the powers of combination are used for purposes of corruption, every thoughtful person must recognize the fact that they afford opportunities for accomplishing ends by bribery and receiving bribes upon which there is at present no adequate check. Hitherto these charges of corruption have almost invariably been made against the combinations representing capital. Also these charges have usually pointed at the corruption of those who could impose or withhold political restrictions. Organizations of labor and their leaders have generally been assumed to be more honest in their methods than combinations of capital. The labor leader has been regarded as a man devoted to the welfare of his class, who, though often fanatical, impracticable, and unnecessarily inclined to violence, was at least above the plane of those who sell honor for money. Recent charges imply that the men to whom labor deposes the management of its organizations, are learning the ways of the wily capitalist, and are awakening to the existence of opportunities for gain by the exploiting for money of the control of labor deputed to them. If all that has been published as to the ways and motives of the walking delegate be true, it would appear that he has become exceedingly wise in regard to the powers of his position.

In the days of innocence, when a strike was ordered, it was supposed to be a remedy for some grievance of the workman. Now the strike is called for the benefit of the labor leader. Rivalries and competitions of employers in the same trade are studied, and the walking delegate dispenses his favors to them for a consideration in precisely the same manner as the political boss is accused of doing. One furnishes or withholds labor, the other deals in legal privileges and

restrictions. One has a legislative body at his service, the other a monopoly of labor of a particular trade. Employers of this labor, rivals and competitors, are as quick to see the advantage of dealing with the walking delegate as are rival corporations to perceive the advantage of negotiating with the political boss. In fact, there are greater possibilities of advantage to an employer of labor dealing with a walking delegate than in the case of a corporation merely warding off attack or procuring legislative favors. The employer can bribe, not only to obtain labor for himself, but at the same time prevent a rival in business from obtaining the necessary workers.

With all the alleged corrupt practices of legislatures, there are limits in the making of laws. The constitution compels equal treatment of all individuals or corporations. No legislature, however corrupt, could hope to make effective a law which would restrict one corporation and grant a privilege to another corporation of the same class. A walking delegate has no constitution to control him, and can blow hot to one employer and cold to another. Employers, too, learning the game by being sought for by the controller of labor seeking his own emolument, as their education progresses, discover how to conspire with the walking delegate against rivals. There are in fact no limits as yet to the use of that kind of corruption. Nor is it difficult to imagine how dealings between organized capital on one hand and organized labor on the other, cynically and scientifically developed, in other words, guided by sagacity and intellect devoid of moral scruples, may easily upset all calculations based on the laws of supply and demand.

As a result of these corrupt practices labor becomes more and more under the control of capital. The workingman may seem to gain some temporary advantage, but in the long run he becomes a mere counter, as much the property of the labor leader as coins are the property of the capitalist. Dealings of this sort eventually make the workman the property of the class he is supposed to be making terms with. Indications in corrupt proceedings of this kind point to a lack of power both on the part of the employer of labor and the workingman to view the matter from a moral standpoint. There seems to be a degree of cynicism, of unconcern as to the right and wrong, on the part of both. The laboring men still have faith in leaders who practice blackmail, and employers as a rule seem to regard blackmail, of which they are the subjects, as only one more incident necessary to the successful conduct of business.

The only redeeming feature is that there is still some hesitation in giving evidence and revealing the truth. This is the tribute that vice pays to virtue. All pretext that the passing of money for calling off strikes is regarded as legitimate business, is swept away by the aver-

sion to give evidence and the euphemisms and excuses employed in such explanations as are made.

It is impossible that such conditions, once known to exist, can continue. If employers all become cognizant of the manner in which it is possible to avoid labor difficulties by purchase, they will begin to bid against each other, and this will raise the demands of the walking delegate. This will bring combination and resistance. On the other hand, the workingmen will probably learn before long that organizations which merely fill the pockets of the leaders with money that should go to the workers are directly opposed to labor interests.

GREAT INDUSTRIAL CORPORATIONS in their financial management afford an interesting field for study, as is illustrated by the unpleasantness which has arisen between the shipyard trust and the Bethlehem Steel Works. This controversy seems likely to throw some new light upon the character of the negotiations by which control of great properties is sought to be gained and transferred.

Trust operations in their inception no doubt yielded profits to the stock and bond holders of the corporations that were consolidated. The greater share of these profits appears to have been absorbed by those who were on the inside, by the promoters of the combinations, but there was enough left to the outside holders to highly impress the general public with the advisability of following the lead of the men who conceived these schemes. Many holders of stocks and bonds regarded as almost worthless were agreeably disappointed and surprised at receiving high prices for their supposed hopeless investments. Faith in the supernatural astuteness and sagacity of the leaders of the new school of finance was thus secured, and there seemed at one time almost no limit to the successful outcome of every enterprise in which they might take a hand. The conviction grew that the resources of these men were so great, and were wielded with so much wisdom, that failure was impossible. By degrees, however, doubts began to materialize—large blocks of the new stocks and bonds began to hang heavy on the markets. There arose much talk of undigested securities. The belief begins to grow that the promoters after all expected the public to furnish the pepsin which was to assimilate this great mass, extract its nutritive value and add it to the rich circulation of confidence necessary to maintain the general prosperity. The public have been relying on the financial leaders to evolve wealth from these manipulations and at the same time the financiers have been relying on the public.

The shipyard promoters came rather too late into the field. After making the original shipyard combination, their ambition rose and

they thought the process could advantageously be extended so that they might themselves produce the material used in their construction work. Then a negotiation was entered into with Mr. SCHWAB for the Bethlehem Steel Works. The issues of stocks and bonds necessary to satisfy Mr. SCHWAB were of such magnitude that by holding them Mr. SCHWAB virtually obtained a controlling interest in the whole combination. But evidently this was not his immediate purpose, nor was it anticipated by those representing the shipyard combination that he desired this control. The expectation on the part of both was that Mr. SCHWAB would unload the securities he received upon the general public. This expectation was not based on any desire to deceive the public. It was no doubt believed, and even great promoters deceive themselves by over confident expectations, that the affiliation of the steel plant at Bethlehem would place the shipyard combination in such an advantageous position to save all the profits on the iron and steel work required in constructing their ships, that they might safely count on general profits sufficient to meet the dividend charges on the old and new securities. Theoretically, perhaps, this should have been an almost certain result. If this had been realized, the public demand for the securities would have enabled Mr. SCHWAB to unload; the new issues would have been digested.

It might be of interest to consider what were the reasons that this plan, which seems to conform to all the principles insuring the success of similar combinations, did not succeed. If the business of the shipyard combination was calculated fairly, and the saving to be effected in the material used by owning their own steel plant was calculated correctly, the promoters ought to have known what they could pay Mr. SCHWAB for the property desired. Probably all this was sufficiently convincing to those engaged in the negotiations when the bargain was made. That there was any desire to foist worthless or overvalued stocks on the public is not to be believed. Mr. SCHWAB's interest did not lie in that direction. The reason of the failure of these securities to command their expected value should be looked for in other directions. There has undoubtedly been some unexpected check to the progress of the business, either because more time than was anticipated is required, or from some mismanagement of the united plants. No one can blame Mr. SCHWAB for desiring to correct faults which seem to block the prosperity of the combination. He may see obstacles seriously blocking the success of the whole business which correct management could remove. He seems to have been fair in offering an alternative to those who represent the opposing shipyard interests. Either let me take control presumably to introduce such management as will insure the success of the original calculations, or give me back the property you purchased of me

and make good what I would have had if I had not turned the property over to you. This is not unreasonable.

The suits in court are not likely to be argued on the main principles involved. Each side, when engaged in a legal controversy, seeks to put the other in the wrong. Public opinion is sought to be invoked by charges and countercharges that the opponent was desirous of foisting worthless securities on trusting and innocent investors. So many quarrels of this kind have been aired in the courts, and there have been so many accusations that the business of the modern financier is to exploit the public, that really it begins to appear as if this were true. But it is unreasonable to suppose that those who finance the industrial interests are actuated by unworthy motives. They desire first of all the success of these industries. They desire to place them in a position to make the largest possible returns on the capital invested, or created by betterments of plant or organization. They have to rely on the estimation of the public for the credit in which they stand, and it is incredible that they should deliberately calculate on robbing investors. Constantly changing conditions in the industrial world make it extremely difficult for the most conservative to avoid mistakes.

THE CONSOLIDATION of the Western National Bank with the National Bank of Commerce in New York is to go through, making, it is anticipated, one of the largest banks in New York city. The capital will be twenty-five millions, and by a late weekly report the net deposits of the two institutions were over 118 millions. The available resources will therefore closely approach \$200,000,000.

The National Bank of Commerce before it became a National bank, in 1864, was doing business under the Banking Laws of New York State. It was the only bank in the country having a capital of \$10,000,000. When the national system was put in operation, in 1863, the State banks were averse to becoming nationalized. In 1864 Congress taxed away their circulation privileges, and made it easy for those desiring to do so to become National associations. It was thought best to offer a special inducement to the Bank of Commerce, the largest bank then doing business in the country, to join the new system, and section 60 of the act of 1864 provided that any existing bank with a capital of \$10,000,000 and a surplus of twenty-five per cent. on becoming a National bank would be relieved from the provision of the law imposing a double liability on stockholders. The Bank of Commerce was the only bank to which this part of section 60 applied. The charter of the National Bank of Commerce, renewed from time to time, contained this exceptional provision, and this, as

well as its being historically the older institution, caused the decision that the National Bank of Commerce should swallow and digest the Western, rather than the reverse.

The new institution is still far behind the Bank of England in capital and deposits, and in its power to issue circulating notes. It will probably be as powerful an institution as the National City Bank, that is, if all the accounts of the Western National are conveyed to it. There is still material among the associated banks for the making of a larger institution, which would outdo even the Bank of England. It is not impossible that the great central bank, refused by Congress, may grow up by natural development under present laws. Once in existence and strong against any possible shock, it is possible that such a bank could be granted a currency privilege without exciting the jealousy of other institutions.

A CENTRAL BANK for issuing currency is occasionally suggested. This bank would have the exclusive privilege of providing bank notes to the existing institutions upon their putting up security satisfactory to the issuing bank.

If the process of consolidation of the New York Clearing House banks continues as rapidly as it has during the last five years, it will not be a lifetime before the whole association may be merged in one overwhelming corporation, bigger than could be started from new capital. Such an institution would be large enough and strong enough to furnish a safe currency if Congress should grant the power. Until this consolidation occurs, the proposition for a great central bank in this country will hardly be taken seriously. The jealousy of all the existing banks would prevent Congress from taking any step to encourage *de novo* the organization of any bank on the lines of the former Bank of the United States. Of course, if such an organization just grew, like "Topsy," as seems not unlikely from the progress of consolidation, the thing being already to hand, Congress might recognize its value and the other banks of the country might not then oppose the utilization of it to furnish a currency either in the form of promissory notes or its certified checks.

If such a consolidation should be formed it would necessarily follow that the present clearing-house would be done away with or rather absorbed by the colossus that was composed of the former associated banks. In its dealings with the other banks outside of the present clearing-house there would have to be clearings of some kind, and probably a new clearing-house would be started which would be under the direction and management of the great bank. Most of its own payments would be arranged by transfers of accounts, as it

would hold the accounts of all the chief financial institutions in the whole country.

As has been remarked before, centralization of industries and properties is the order of the day. Banking has so far been less affected by it than any other form of business. In New York city the process seems to have begun.

THE DEMAND OF THE CLEARING-HOUSE BANKS of New York city that the trust companies which enjoy the facilities of the clearing-house shall carry additional reserve has been complied with by seventeen companies. Nine have withdrawn. The banks proper never complained of the companies as long as the latter confined themselves to the business for which they were especially constituted. They complained when the companies entered into competition with the banks on the special field of the latter, using the facilities afforded by the banks to compete with them.

The seventeen companies which have deemed it best to comply with the reserve conditions required have shown by their action that they were not willing to sacrifice their banking business and depend simply on the trust business. Apparently, the nine that have cut loose from the clearing-house do not regard the banking business as of sufficient importance to go to the expense of holding the cash reserve required.

It is difficult to understand why a trust company having all the business it needs in its legitimate line should wish to compete with the banks in theirs. Probably more trust companies than were really necessary have been organized because of the financial opportunity to do a banking business as an auxiliary source of profit to their trust business. Therefore, it seems likely that the trust companies which still remain in the clearing-house will gradually withdraw as their trust business increases. This view seems to be borne out by the fact that the nine companies withdrawing from the clearing-house control comprise some of the oldest and strongest of the whole twenty-six.

For years the banks have been grumbling about the competition of the trust companies. They endeavored to equalize taxation and to obtain legislation which would make them less formidable competitors. Why did the banks not do before what they have done now? This is probably to be explained by the immense increase in strength and resources of the clearing-house banks during the last ten years, and the greater compactness of the organization from the reduction in numbers by consolidation. The larger banks undoubtedly exercise a stronger control and make possible a stronger policy than could be enforced formerly.

SYNDICATES AS PROMOTERS OF FINANCIAL ENTERPRISES.

The syndicate as a financial contrivance is probably old in principle, but it was new to the financiers of the United States when the name was first heard in connection with the refunding operations conducted when Mr. Sherman was Secretary of the Treasury. Since then syndicates have been used several times in floating loans of the United States. A notable one was the Belmont-Morgan syndicate to protect the gold reserve during Cleveland's Administration.

A syndic was originally a sort of judge, and a syndicate a council composed of syndics. The term was a high-sounding one and seemed especially fit to designate a combination or affiliation of capitalists formed to conduct some monetary operation in which profit was almost sure to accrue, but which was on too large a scale for one single bank or capitalist. The name had a sort of sacred sound and well conveyed to the mind of the great investing public, which was the source from which the profits were to be derived, the almost reverend and sacred character with which the syndicate sought to invest its transactions. It at once suggested grave and reverend seniors, whose word was their bond and whose wealth was beyond computing. No one but bankers of world-wide renown could be supposed to be members of so august a body, and it was seldom that occupation could be found for it outside of government loans. It is only within the last decade that the syndicate has been applied to baser uses.

The profits of the bankers concerned in these combinations, when Government loans were involved, were not very astonishing. They were, however, sure—and comparatively small as they were the mind of the average citizen was easily stirred up in envy. Much vituperation was spent on the Belmont-Morgan syndicate because it sold bonds allotted to it at 104 at 112. The Government loan became such a good thing that the Treasury authorities did not have to beg a syndicate to take the securities. They found it more profitable to solicit bids and allot the bonds to the highest bidders. Popular loans succeeded, and syndicates having worked themselves out of a job on Governments, began to take up securities of large commercial and industrial enterprises.

With the inauguration of trusts, syndicates found a new field. These billion-dollar capitalizations gave great opportunity for profits compared to which the profits on floating Government bonds were small indeed. But as the profits increased so did the risks. A very few years ago when the syndicate method of underwriting enterprises was in the first bloom of its success, banks and financial institutions crowded one another in their desire to become one of the favored syndics. Profits were sure and large and risk appeared to be small. The money required in case the public did not take the securities was easily promised and signed for. But as the best enterprises were by degrees financed in this manner, others of less intrinsic merit came on the stage, or

perhaps the investing public was gluttoned. The underwriters now began by degrees to discover that it was not all of such an undertaking to take the profits. Syndicates began to be left with securities on their hands which the public did not ask for even when urged. The underwriters had to take these securities themselves and pay for them and then get rid of them as best they could or hold them. Hence the undigested securities of which so much is heard.

This result took off the fine eagerness with which capitalists once responded to the promoter of the syndicate. Formerly a great name in finance carried through a proposition without question. But now underwriters have to be sought for. The promoter, too, has grown cautious and avoids responsibility by inviting the fullest and most careful examination.

This course of events and change in syndicate business does not indicate any serious falling off in the real value of the securities dealt in. It is natural that the surplus capital seeking investment should have its periods of increase and diminution, and that after changes in the form of investment have been accomplished, periods of rest should ensue. The syndicates found a harvest in the changes which the desire to cure the evils of excessive and blind competition made necessary. Now that these changes have been generally made time is required to show how the productive industries will progress under the new conditions. In so many great transactions it was inevitable that some abuses should creep in. There are, however, still other fields in which capital has not yet been subjected to the consolidation process.

There are indications in the consolidation of banks heretofore regarded as great into institutions of still larger power, that the syndicate itself will be consolidated. How much better for the promoter to have at his command one institution capable of underwriting capitalizations, which formerly he had to offer to a dozen or more affiliated banks and financial institutions. But even if the syndicate is thus rendered for a time unnecessary, it may appear again in more gigantic form when two or more of these great banks join hands as the smaller ones did before.

What enterprise is there that will demand the services of so much capital, it may be asked. It is not difficult to guess that consolidation of the railroads of the country will be a work worthy of the greatest financiering power and skill. This process of railway consolidation has hardly begun, and yet such combinations as have already been made have been looked upon as startling in their magnitude. The National Securities decision has caused promoters to review the ground and to seek for methods which do not infringe existing law and constitutional provisions. Just as in other industries there were some corporations that paid and others that did not, so to-day there are railways that pay and those that do not. Any one who examines the lists of railway bonds and stocks at once notices the great diversity of prices. If consolidation has done so much for many industries, there is every reason to believe that the railways afford a still greater field for the trust remedy. If, for instance, all the roads in the country were under one management, by judicious arrangement of the business of the various lines, by the cessation of injudicious competition, and by establishing new connections, it is almost certain that the poorest paying roads could be greatly improved not only for the benefit of their bond and stockholders but also of the resources of the territory through which they run. Socialists would bring this about by Gov-

ernment ownership, but how much more cheaply and thoroughly it can be done by private effort. The largest capital will be none too large to bring this about. There is no end to the financial game. The largest ideas of one period are speedily outdone by those of the succeeding period. The syndicate has perhaps more than any single instrumentality enlarged financial ideas. On the other hand the experience of syndicates has shown that in large as well as in small undertakings there must be the same care that the basis on which the greatest structure is raised must be sound in all its lesser units. In all enterprises there must be an income-earning power. Better management may conserve and increase it. Over-capitalization will not diminish it, although such over capitalization may change its distribution and interfere with proper management.

NEW YORK'S FINANCIAL PRIMACY.—The fact that New York city is soon to have the largest bank in the world need not surprise anybody. New York is the second of the world's cities in size and the first in the amount of its business. The total of its bank clearings has led that of London for several years. The gap between them must grow wider and wider as time passes. More millionaires reside in New York than in London and Paris together. Within a quarter or a third of a century New York, at the present relative rate of increase of the two towns, will lead London in population. Long before that time the world's financial center will be on this side of the Atlantic. That \$100,000,000 bank which is soon to be established in the American metropolis will probably have many counterparts within the next ten years.—*St. Louis Globe-Democrat*.

A BANKER HONORED.—At the Republican State Convention, held at Columbus, June 4, Hon. Myron T. Herrick, President of the Society for Savings, Cleveland, and former President of the American Bankers' Association, was nominated for Governor of Ohio. The following was adopted as the financial plank of the platform: "The Republican party, having restored the national credit after it was nearly destroyed by the Democratic party, and having maintained, defended and advanced it to the highest in the world, with every dollar of full value, and having given to the people the only banking system that operates uniformly everywhere without loss and at lowest cost, should now endeavor within safe lines to stimulate local bank circulation, thus securing an elasticity of currency supply commensurate with business demands; and we favor well guarded legislation to this end."

SENATE COMMITTEE ON FINANCE.—The following is a list of the Finance Committee of the Senate: Nelson P. Aldrich, Rhode Island; William B. Allison, Iowa; Orville H. Platt, Connecticut; Julius C. Burrows, Michigan; Henry C. Hansbrough, North Dakota; John C. Spooner, Wisconsin; John P. Jones, Nevada; Geo. G. Vest, Missouri; John W. Daniel, Virginia; Henry M. Teller, Colorado; Hernando D. Money, Mississippi.

A sub-committee, including Senators Aldrich, Platt and Spooner, have had charge of the drafting of a new financial bill which will be laid before Congress at its next meeting.

THE HISTORIC FAILURE OF BIMETALLISM.

[Interest in the subject of bimetallism has been revived by the movement to adjust the monetary systems of Mexico and China—the last of the great silver-using nations—to the gold standard. Mr. Charles A. Conant, the author of the following article, is now in Europe as a member of the Commission on International Exchange, conducting negotiations on behalf of the United States, Mexico and oriental countries looking to the establishment of more stable relations between the currencies of countries on the gold basis and those still using silver as the standard. Preliminary to a consideration of the work of the commission, it will be interesting to study the historic failure of bimetallism.—Editor BANKERS' MAGAZINE.]

The theory of a bimetallic currency has had for many able minds a peculiar charm, which has made them the willing champions of a monetary system avowedly supported by others on grounds far from scientific or well-reasoned. Bimetallism in its proper sense means that the mints shall be open to the free coinage of two metals, like silver and gold, at a ratio fixed by law and that the coins of these metals shall be legal tender without distinction and without limit in amount. Any other method of employing two metals together as money—such as the control of the output of the coins of one metal by the Government or the limitation of the amount for which one of them is a legal tender—may fall within the etymology of the term bimetallism, but hardly within its proper economic meaning. Such monetary systems fall properly under the classification of a limping or composite standard. Thus France, when she closed her mints in 1873 to the coinage of silver bullion at the will of the owner of the bullion, ceased to be under the régime of bimetallism. She passed under that of the limping standard. Her act of legislation made at the given moment no change in the concrete composition of her currency; but it signified that thereafter the elastic element of her metallic money, which might come and go, at the will of its holder, through her mints into and out of the channels of her circulation, should be the single metal, gold, and not the two metals, gold and silver.

Bimetallism has found scientific defenders upon the ground that it affords distinct advantages as a monetary system over monometallism. Few have denied that it would have such advantages if the ratio fixed by law between the two metals could be maintained in the bullion market. Upon this point, the contention of the advocates of bimetallism was thus set forth with clearness and precision, by the British Gold and Silver Commission: *

"If the possessor of any quantity of silver could, by taking it to the mints, have it converted into coins available as legal tender at a fixed ratio with gold, he would never part with it except at a gold price closely approximating to the value represented by that ratio. The variations in the gold price of silver would, therefore, be scarcely appreciable."

Whether this statement is supported by facts and sound reasoning is the crux of the dispute regarding the practicability of bimetallism. Two questions are raised by the position of the bimetallists: (1) Whether the adoption

* Senate Misc. Doc. No. 34, 50th Congress, 2nd Session, p. 60.

of a bimetallic coinage system would modify the relations of value which would otherwise exist between gold and silver; and (2) whether, if such modifying influence is granted, it would be of such a character as to give absolute fixity to the relationship between the two metals? Towards a correct solution of these questions it will be necessary to consider such historical facts as are available and afterwards the reasoning based upon these facts and upon abstract theory.

THE FRENCH TEST OF BIMETALLISM.

The most conspicuous test of the system of keeping gold and silver in circulation side by side was made in France from 1803 to 1873. The legal ratio between the two metals was fixed in 1785, upon the recommendation of Calonne, the Minister of Finance, at $15\frac{1}{4}$ to 1, which has been so much discussed by the advocates of bimetallism. In 1785, however, the free coinage of gold was not established in France, but such old gold coin as was then in circulation was recoined at the new valuation. It was in 1803, when the administrative and financial system of France was being reorganized by Napoleon, that the French bimetallic system, so-called, was adopted. The ratio of $15\frac{1}{4}$ to 1, chosen by Calonne, was then retained, and provision was made for the coinage of both metals. The French law, however, was not so clearly a bimetallic law as most of the advocates of the system in modern times have maintained. Gaudin, the Minister of Finance, did not apparently have any inkling of the modern bimetallic theories, that opening the mints to both metals would tend to maintain their relative value by affording an unlimited outlet for the cheaper metal when the dearer ceased to be brought to the mints. He adopted a ratio which was nearly the market ratio of silver and gold, but which slightly undervalued gold and would therefore tend to make silver the standard in use and keep gold out of circulation. The new law, moreover, by no means consciously adopted the bimetallic system in the sense in which it is now generally understood. The law simply declared:

"Five grains of silver, nine-tenths fine, constitute the monetary unit, which retains the name of franc."

The unit of the French monetary system, therefore, was a silver coin. It was simply provided that gold was to be coined in twenty and forty-franc pieces at the fixed ratio of $15\frac{1}{4}$ to 1. Gaudin had heard so little of the modern bimetallic theory that his first project contained an explicit recognition of the probability that the rating of gold to silver might require to be altered from time to time; but this was stricken from the plan in the course of discussion.*

These facts are important, not as weakening the force of any abstract arguments for bimetallism, but as tending to show from the actual record of events that bimetallism hardly existed even as an abstract conception among the statesmen of 1803. If true bimetallism resulted from the operation of the French coinage law, it was the result of the evolution of events, and this would be in some senses a more important evidence than academic theories of the utility of such a system, by showing its adaptation to actual conditions. We shall see, however, that the plan of 1803, although adopted in Belgium in 1832 and later by Switzerland, Italy and Greece, did not maintain among the money changers the concurrent estimation of gold and silver at the valu-

* Walker, p. 88. A provision of this character was preserved in the Belgian Law of 1832.—Vide Anslaux, "*La Question Monétaire en Belgique*," p. 8.

ation given by law. On the contrary gold flowed into the country and came to the mints when gold was worth less than the mint rate in relation to silver; gold flowed out of the country and was not brought to the mints when it was worth more than the mint rate in relation to silver.

Examination of the coinage and the foreign trade statistics will illustrate these tendencies. From 1803 to 1848 the circulation of France was almost entirely of silver. From 1795 to 1847 gold formed 22.9 per cent. of the coinage of the two metals, silver 77.1. From 1830 to 1848 gold was only 10.9 per cent. and silver was 89.1.* The movement of foreign trade showed that up to 1837, so far as the figures are available, there was a slight excess in exports of gold over imports, while the net imports of silver amounted to 1,032,000,000 francs (\$200,000,000). It cannot be assumed, however, that the absence of heavy net exports of gold from France indicates the continuance of the use of gold in currency. France was not a gold-producing country and it is not an unreasonable assumption that for thirty-five years her consumption of gold by jewelers and by other artisans equalled 10,000,000 francs a year or 350,000,000 francs (\$69,000,000) in thirty-five years.† Obviously such a use of gold made a material deduction from the stock in use as currency.

The question whether gold disappeared from circulation in France during the period ending with the great gold discoveries about 1850, and thereby demonstrated the breakdown of the bimetallic system, has been warmly debated, but it appears to be largely a question of opinion as to what constituted a gold circulation. Gen. Walker endeavors to show that "although silver was being imported to an enormous extent, because overvalued in the coinage, gold still remained money in France in appreciable quantities."‡ Whether "appreciable quantities" remained or not seems to be somewhat apart from the question whether concurrent circulation was successfully maintained. It was declared by a French official report in 1872 that up to 1850 "silver was our sole monetary circulation." Another report, made in 1869, quoted Gaudin as estimating that in 1803 one-third of the metallic circulation of France was of gold, but declared that in 1848 almost all of this gold had disappeared and out of 53,000,000 francs then possessed by the Bank of France, only 1,000,000 francs was in the yellow metal. It was customary in those times, that "when one was paid even so small a sum as 1,000 francs, he received this bulky and heavy money in a canvas bag and had to hire a porter or a cab to carry it home."§

EFFECT OF THE GOLD DISCOVERIES OF 1848.

Whatever happened in France prior to the gold discoveries of 1848, there is little dispute as to what occurred afterward. Gold, by reason of the large amount produced in California and Australia, fell below silver in value at the French coinage ratio and began to pour into the French mints in a golden torrent. Silver ceased to reach the mints, and was largely exported, but at a rate which did not entirely offset the influx of gold. This was due to the fact that the increase in the world's supply of metallic money permitted a

* Willis, p. 5.

† "There is, furthermore, reason to believe that the exports of gold consisted chiefly of coin, while the imports of gold were largely of bullion."—Willis, p. 4.

‡ "International Bimetallism," p. 126.

§ Report of U. S. Monetary Commission of 1876, p. 146.

larger distributive share to fall to France, but much more than the net increase was in gold. The contrast between the amount of coinage of gold and silver at the French mints before and after the opening of the California mines is thus graphically presented by M. Arnauné:*

PERIOD.	Average commercial ratio.	Gold coined, francs.	Silver coined, francs.
1821-1850.....	15.76	453,174,270	3,190,913,487
1851-1870.....	15.44	6,436,080,610	528,138,619

Thus, with a change of little more than two per cent. in the average ratio of the two periods, the percentage of gold coinage to silver coinage changed from about one in eight parts of value to about twelve parts in thirteen. The experience of France under this avalanche of gold is one of the arguments most dwelt upon by the bimetallicists to prove the value of a double or bimetallic standard. They maintain that if the French mints had not been thrown open to gold, and the laws of France had made silver the sole legal tender, the new gold would have been pent up in the old gold countries, would have produced by its increase of volume a disturbing rise of prices, and would have cheapened the yellow metal to a point which would have carried it very far below the ratio of 15½ to 1. There is some force in these arguments.

The outlet afforded by France for the new gold undoubtedly contributed to widen the circle of demand for the metal and thereby to maintain its value. The effect of the depreciation which would have fallen upon gold without the French mint laws, however, and the disturbing effects upon values and prices which was actually felt, were greatly exaggerated at the time and have been greatly exaggerated since. Chevalier, although fully cognizant of the French bimetallic law, anticipated that the new gold would raise prices by fifty per cent. and Prof. Jevons estimated a rise of thirty per cent., by the simple operation of the increase in the quantity of money in relation to commodities.† Nothing of the kind occurred or probably would have occurred even if the French monetary laws had been different.

The essential weakness of the reasoning of Prof. Jevons was that he ignored the operation of one of those economic laws of which he was himself a leading exponent—the law of marginal utility, or the natural selection by men of the most efficient and economical tools for accomplishing the maximum of results. Gold was generally recognized before the discoveries of 1848 as the most efficient money of modern commerce. It was relatively scarce, however, and therefore difficult to obtain except at a high price in other capital. This being the case, even wealthy nations hesitated to adopt gold as their sole standard. When gold became relatively plentiful, a demand which had before been ineffective because of the high price of gold, and had been simply lying in wait for a fall in its price, came into play to meet the increased supply. A desire which had not reached the character of an effective demand and could, therefore, according to economic reasoning, be ignored, thus became an effective demand. It is plain, therefore, why France absorbed more gold than she exported silver. She needed a larger medium of exchange, especially in her rural districts, to meet the expansion of commerce which

* *La Monnaie, le Crédit et le Change*, p. 172.

† "Investigations in Currency and Finance," p. 74.

was beginning with the development of new means of production and transportation.*

FORMATION OF THE LATIN UNION.

In Switzerland the attempt to adopt the French silver system, which was made by the law of 1850, was defeated by the fall in the value of gold. French gold coins flooded the country, the silver five-franc pieces first disappeared and then began to follow them the subsidiary pieces of one and two francs. Switzerland by a law of 1860 saved her subsidiary circulation by reducing it from the fineness of nine-tenths to eight-tenths. These coins were introduced across the French frontier as substitutes for the French coins, which by reason of their greater fineness, were melted up and sold as bullion.† Italy adopted the French system of coinage, but with subsidiary coins of the fineness of 0.835, by the law of August 24, 1862, and got in circulation more than 100,000,000 francs in the new pieces while France hesitated.‡ At length, so manifold were the difficulties caused by the undervaluation of silver in all the countries where the French decimal system prevailed, that an international conference was summoned, on the motion of Belgium, for considering some method of arresting the loss of silver. This conference, held during the autumn of 1865, resulted in the convention known as the Latin Union. The parties to the union were France, Belgium, Italy and Switzerland. Greece soon signified her adhesion to the convention, and the coinage system of Spain after 1868 was modeled on the French system, although Spain did not become a member of the Union.

The essential result of the conference was to reduce the metal in the subsidiary silver coins of the countries of the Union to a point which would carry them below their face value in gold and prevent their exportation. The formation of the Latin Union was, in the language of Mr. Shaw, "a measure of defense against the action of the bimetallic system in those countries which had adopted the monetary system of France, and lay exposed to all its disastrous fluctuations."§ The idea has grown up among careless observers that the Latin Union was a convention for the promotion of bimetalism and a common coinage system among the countries taking part. The fact was substantially the opposite. The countries which took part had already adopted the French monetary system and the conference was called for the purpose of guarding against the difficulties which had developed under its operation. The convention of the Latin Union practically adopted gold as the standard of the countries taking part. The mints were left open to the free coinage of both metals, but silver was too much undervalued at the coinage ratio to be presented for coinage and it was not then anticipated that this condition would change. In order to avert the melting down of the subsidiary silver, the fineness of the coins was reduced from nine-tenths to 0.835, and in order to prevent excessive coinage the quota for each country was fixed at six francs (\$1.158) per head of the population.

The conditions which attended the formation of the Latin Union in 1865 changed radically within the next three years. The production of silver

* Prof. Jevons notes the influence of "the extension of the currency of the world, caused by the spread of commerce," but expresses the opinion that "most writers have over-estimated the consumption of gold" due to this cause.—"Investigations in Currency and Finance," p. 69.

† Laughlin, p. 147.

‡ Willis, p. 38.

§ "History of Currency," p. 120.

throughout the world in proportion to gold greatly increased, the output of gold slackened, and silver fell to a bullion value in 1867 of 15.57 to 1. This made it more profitable to present silver to the mints for coinage than gold and changed entirely the nature of the problem confronting the countries of the Union. Then came the war with Germany, which greatly impaired the financial as well as military prestige of France, and the adoption by Germany in 1871 of the gold standard, followed in 1872 by the monetary treaty between Norway and Sweden and Denmark, establishing gold as their monetary standard. The current of gold which had flooded the French mints dried up and the channel was refilled by silver from the American mines. The coinage of silver at the French mints, which had been practically nothing for a dozen years, rose to 129,445,268 francs in 1868 and to 156,270,160 francs in 1873. The mint of Belgium was besieged by the owners of silver bullion and 111,000,000 francs in five-franc pieces were coined in 1873. Even in Italy, although the country was on a paper basis, it was found profitable to present silver for coinage to the amount of 42,000,000 lire.

Action to avert the flight of French gold and the reduction of the country to a single silver standard was felt to be urgently required. The French mint took the first step in extending the time within which silver coins were delivered to the depositor of the bullion from which they were to be coined. The usual term of these receipts, which had been ten days, was extended from time to time, until in 1874 the period reached nine months.* More drastic measures than mint regulations were required, however, to effectively check the flood of silver and save France from silver monometallism. The convention of the Latin Union was called together annually for the four years beginning with 1873, the free-coinage of five-franc pieces was suspended, and the maximum coinage to be allowed for each country was fixed by agreement.† Finally, in 1878, the free coinage of five-franc pieces was absolutely suspended, and the issue of the token coins of silver was strictly limited by various conventions of the States of the Union. The five-franc pieces already coined remained legal tender without limit; but gold was henceforth the standard, and the silver coins were kept at par with the standard in spite of the steady downward plunge in their bullion value, by the limitation of their quantity and the fact that they were received at par for public dues.

EXPERIENCE OF THE UNITED STATES.

The experiment of bimetalism in France was thus abandoned after partial enforcement for seventy years, by the deliberate closure of the mints to silver. In the United States also, at nearly the same date, the free coinage of silver ceased to be lawful, under conditions which have been the subject of prolonged and bitter controversy. The monetary system created by Hamilton in 1792 established the ratio of 15 to 1 between silver and gold. The mint was open to the free coinage of both metals and it has been contended by many American bimetalists that the system of 1792 established bimetalism in the United States. Upon this point, however, so intelligent and careful a bimetalist as Gen. Walker declares: ‡

* Walker, p. 172.

† Absolute suspension might have been decreed but for the desire of Italy, which was on a paper basis, to hold silver in her bank reserves.— *Vide Willis*, pp. 134. seq.

‡ "International Bimetalism," p. 112.

"A fair trial of bimetallism, under reasonably favorable conditions, could not possibly, in the nature of the case, have been conducted here. The people of this country, throughout the period under consideration, habitually used so small an amount of either or both of the precious metals, in comparison with other nations, and in comparison with the stock of these metals throughout the world, that a bimetallic law here instituted could not have afforded a fair trial of bimetallism."

Gen. Walker further declares that "The manner in which bimetallism was put into operation here, by the act of 1792, on the one hand, or by that of 1834 on the other, was such as necessarily to bring about an early failure, even though the principle of bimetallism were admitted to be perfectly sound." He bases this statement partly upon the selection by Hamilton of a ratio which was different from that of France and was different from the market ratio.* This ratio, as established by the act of April 2, 1792, was 15 to 1. Gold was undervalued, with the result that little was brought to the mints and much was exported. It had been the intention of Hamilton to establish the double standard, because he did not believe that the United States were rich enough to retain a gold currency. The fall in the value of silver, however, caused it to be used in paying debts and made it practically from 1792 to 1834 the standard of monetary transactions.†

A new policy was adopted in the United States by the act of June 28, 1834. This act changed the ratio between gold and silver from 15 to 1 to 16 to 1. This change was accomplished by lowering the weight of the gold eagle from 270 to 258 grains of standard gold.‡ The weight of the silver dollar and the amount of silver which it contained were left unchanged, but the dollar was practically discarded by giving it a lower value at the mint in relation to gold than the value of the bullion which it contained. The change of the ratio from 15 to 1 to 16 to 1 was made with the scarcely concealed purpose of favoring the coinage of gold. The market ratio, it was declared by Thomas H. Benton, was about 1 to 15½, and the adoption of a higher mint value for gold would tend to bring it to the mints and keep away silver. There were several political motives for seeking this end.§ Gold had been discovered in North Carolina; the hostility to the Bank of the United States was cleverly directed against its paper issues and in favor of a gold currency; and President Jackson desired to make the public revenues of coin rather than of bank paper. The act of 1834 was known, while pending, as "The Gold Bill," and the ratio of 16 to 1 was adopted for the purpose of putting the United States on the single gold standard.|| Its influence was so powerfully felt that

* "International Bimetallism," p. 114.

† Mr. Gouge declared that "gold is, in the spirit of our laws, a subsidiary currency, its value being computed in silver dollars."—"A Short History of Paper Money and Banking in the United States," p. 107.

‡ By the act of 1834 the amount of pure gold in the eagle was fixed at 232 grains, or a ratio almost exactly 16 to 1; but by the act of January 13, 1837, the amount of pure gold was raised to 232.2 grains without changing the gross weight of 258 grains, in order to make the fineness exactly nine-tenths. This made the ratio about 15.98 to 1. *Con. Laughlin*, p. 73.

§ "The ultimate object proposed to be accomplished by Mr. Calhoun in this process of 'unbanking the banks,' was to arrive eventually, and by slow degrees, at a metallic currency, and the revival of gold. This had been my object, and so declared in the Senate, from the time of the first opposition to the United States Bank."—Benton, "Thirty Years' View," I, p. 436.

|| This is admitted by Gen. Walker, who declares that the influence of the United States, "instead of being used to sustain bimetallism, was practically exerted against it."—"International Bimetallism," p. 117.

in the autumn of 1834 gold began to move towards the United States in such volume that alarm was created for a time in London for the reserves of the Bank of England.*

It was after the gold discoveries of 1848 that the most serious difficulties began to be encountered in the United States in retaining silver in circulation. The great increase in the output of gold tended to lower its value in relation to silver and made it profitable to melt up the silver coins and export them. The operation of Gresham's Law under such conditions is well set forth by Prof. Laughlin:†

"In 1834 an ounce of gold bought about 15.7 ounces of silver in the bullion market (but sixteen ounces in the form of coin). In the period we are now considering, however, since gold had fallen in value, one ounce of gold could buy 15.7 ounces no longer, but a less number, which in 1853 was about 15.4 ounces. It will be seen at once that this widened the difference between the mint ratio of 1:16 and the market ratio, and so offered a greater profit to the watchful money brokers. Being able to make legal payment of a debt either in silver or gold, a man having 1,600 ounces of silver could take only 1,540 of them to the bullion market and there buy 100 ounces of gold, which would by law be legal acquittal of his debt. He would thus gain sixty ounces by paying his debt in gold rather than silver."

The gold standard was further confirmed and established by the act of February 21, 1853, which was passed to arrest the disappearance of the subsidiary silver coins. No provision was made in this act in regard to the silver dollar, because none had been coined for many years; it was above the gold dollar in bullion value, and it was not then anticipated that silver bullion would ever again be offered at the mints on private account for coinage into dollars. The Chairman of the Committee of Ways and Means, Mr. Dunham, in speaking upon the bill in the House, declared:

"We propose, so far as these coins are concerned, to make silver subservient to the gold coin of the country. We intend to do what the best writers on political economy have approved; what experience, where the experiment has been tried, has demonstrated to be the best, and what the committee believe to be necessary and proper—to make but one standard of currency, and to make all others subservient to it. We mean to make the gold the standard coin, and to make these new silver coins applicable and convenient, not for large, but for small transactions."

The act of 1853 reduced the number of grains of pure silver in two half dollars from 371.25 to 345.6 and reduced the standard weight from 412.5 to 384 grains, equivalent to a reduction of 6.91 per cent. The privilege of free coinage of these coins on private account was withdrawn, and their legal tender power was limited to five dollars. By these provisions the United States definitely adopted the policy of the single standard of gold, with subsidiary token coins of silver, the latter maintained at parity with gold by Government control of the output and by the limitation of their legal tender power.

THE SO-CALLED CRIME OF 1873.

From 1853 to 1861 the standard of the United States was gold, so far as it was not impaired by excessive issues of bank paper and by the suspension of cash payments in the crisis of 1857. From 1861 to 1873 the country was upon a paper basis, in which the specie value of legal-tender money was determined by the quantity in use and the credit of the general Government. This paper

* Laughlin, p. 66.

† "History of Bimetallism in the United States," p. 76.

money, by its depreciation in gold value, first expelled the standard coins of gold and then dropped so low that it became profitable to melt up and export the subsidiary coins of silver. The scarcity of small change was supplied by the issue of private tokens and finally by the issue of Government notes for denominations as low as three cents. The question of the metallic standard, therefore, was not a practical one until preparations began for the resumption of specie payments. When it became necessary to prepare for the coinage of metallic money for the resumption of specie payments, it was deemed advisable by the Treasury Department to revise and codify the coinage laws. In the course of this codification demonetization of the standard silver dollar, already accomplished in fact in 1834 and confirmed in 1853, was legally recognized. The act of February 12, 1873, "revising and amending the laws relative to the mint, assay offices, and coinage of the United States," provided for certain coins, among which the standard silver dollar was not included, and then in a subsequent section provided:

"That no coins, either of gold, silver or minor coinage, shall hereafter be issued from the mint other than those of the denominations, standards and weights herein set forth."

Such silver dollars as were in existence, however, still retained their full legal-tender quality until the enactment of the Revised Statutes in June, 1874, which contained the following provision:

"Section 3586. The silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding five dollars in any one payment."

It was this legislation of 1873 and 1874, in its relation to subsequent events, which led to the charge that the silver dollar had been surreptitiously demonetized and that this action by Congress constituted the "Crime of 1873." The act of 1873 was passed, however, after a report made to Congress by the Secretary of the Treasury as early as April 25, 1870, after being reprinted as many as thirteen times in the course of its consideration, and after special attention had been called in several reports to the fact that the silver dollar was discontinued and that it was the purpose to continue and confirm the gold standard.* It was proposed in the original bill sent to a committee by Comptroller Knox, that there should be a silver dollar of 384 grains standard silver, instead of the standard coin of 412½ grains, but that the new dollar should be coined by the Government and circulate as a token coin of limited legal-tender power. This provision, however, was not retained in the final draft of the act.

RESUMPTION OF THE COINAGE OF THE SILVER DOLLAR.

It was after the fall in the gold value of silver had changed seriously the relations between the two metals that agitation began for the remonetization of the standard silver dollar of 412½ grains at the ratio of 16 to 1 which had been fixed by the act of 1834, and for the free coinage of this dollar on private account with full legal tender power. It was then that the advocates of this policy expressed surprise that the silver dollar had been discontinued by the act of 1873, and that the more hot-headed among them attributed this action

*It does not fall within the scope of this work to analyze further the evidence on this subject; it is set forth by Prof. Laughlin, "Bimetallism in the United States," ch. VII, and by Mr. Watson, "History of American Coinage," ch. VIII. Senator Sherman declares that "There never was a bill proposed in the Congress of the United States which was so publicly and openly presented and agitated."—"Recollections of Forty Years," I, p. 467.

to conspiracy on the part of the advocates of the gold standard. It was emphatically declared by the gold men that the free coinage of silver under existing conditions would drive gold from circulation, injure the public credit, and result in a dishonest readjustment of debts which had been incurred under the gold standard. Notwithstanding these protestations, the economic conditions of the country and the scarcity of money were such that the House of Representatives, in the autumn of 1877, passed a bill reported by Representative Bland of Missouri, for opening the mints to the free coinage of the silver dollar. This bill was amended in the Senate so that the privilege of free coinage on private account was eliminated, but the Secretary of the Treasury was authorized and directed to buy not more than four million ounces and not less than two million ounces of silver bullion per month, and to coin such bullion into standard silver dollars of 412½ grains. This measure was known as the Bland-Allison Act, because Senator Allison was the author of the modifications made in the original Bland Act with the purpose of preventing free coinage. In spite of the veto of President Hayes, the bill was passed by the two-thirds vote in each House necessary to override a veto and became a law February 28, 1878.

RESULTS OF THE BLAND-ALLISON AND SHERMAN LAWS.

The act of 1878 did not have the expected effect of raising the price of silver bullion or seriously staying its fall. A new agitation for the free coinage of silver, which came to a head in the fifty-first Congress, resulted in the passage (July 14, 1890,) of the so-called "Sherman Law." Senator Sherman was responsible for this law in the same sense as Senator Allison for the act of 1878—that he presented it as a substitute for a bill for the free coinage of silver.* The act followed in part the recommendations of Secretary Windom, in his annual report for 1889, that silver bullion should be purchased monthly by the Treasury and should be paid for in notes issued by the Government. The House of Representatives passed a bill conforming in some degree to the recommendations of the Secretary, but providing that the proposed notes should be redeemable in coin instead of silver bullion.† The Senate substituted a bill for the free coinage of silver. In Conference Committee a modified bill was adopted requiring the Treasury to purchase four and a half million ounces of silver per month and to issue Treasury notes, which the Secretary of the Treasury was directed to redeem "in gold or silver coin at his discretion."

The cumulative effect of the coinage under the Bland-Allison and the Sherman acts soon proved disastrous. It became evident that the circulation was surcharged with silver to an extent beyond the capacity of trade to absorb

* Senator Sherman afterwards declared: "The silence of the President on the matter gave rise to an apprehension that if a free coinage bill should pass both Houses he would not feel at liberty to veto it. Some action had to be taken to prevent a return to free silver coinage, and the measure evolved was the best obtainable. I voted for it, but the day it became a law I was ready to repeal it, if repeal could be had without substituting in its place absolute free coinage."—"Recollections of Forty Years," II, p. 1070.

† The essential recommendation of Secretary Windom on this subject was to "issue Treasury notes against deposits of silver bullion at the market price of silver when deposited, payable on demand in such quantities of silver bullion as would equal in value at the date of presentation the number of dollars expressed on the face of the notes at the market price of silver, or in gold, at the option of the Government; or in silver dollars at the option of the holders."—"Finance Report, 1889," p. lxxiv.

it, and the influence of Gresham's law began to be clearly manifest. The fact that the volume of money was excessive tended to drive the surplus abroad, and the only money which would be accepted abroad was gold. Hence the constant tendency of the excess of silver issues above the needs of trade was to deteriorate the average quality of the currency by increasing the ratio of the silver, all of which remained at home, to the gold, much of which went abroad. Gold exports began in large volume the month the Sherman law was approved. The fiscal year ending June 30, 1891, witnessed net exports of gold from the United States to the amount of \$68,130,087; 1892, \$495,873; and 1893, \$87,506,463. The small net exports of 1892 were due to the unusual movement of American crops, which brought a considerable current of gold into the country to offset that which was lost under the pressure of the Sherman law. There was a remarkable coincidence between the issues of Treasury notes under this law, the net exports of gold, and the reduction of the gold holdings of the Treasury. The Treasury notes issued from the date of the passage of the law up to June 30, 1893, were \$147,190,227; net exports of gold for the three years ending June 30, 1893, were \$156,132,423; and the net reduction of the gold in the Treasury was \$133,156,991.

While the United States thus appeared in the markets of the world, by the laws of 1878 and 1890, as greater purchasers of silver in a single year than the entire coinage of silver in the country during any previous period of a generation, or the entire imports of silver into France in any year prior to 1873, these laws failed to restore the parity of silver with gold at the ratio of 16 to 1, and still less at the European ratio of 15½ to 1. The purchases of silver under the act of 1878 were 291,272,018 ounces, representing a cost of \$308,279,260. This represented an average price per fine ounce of silver of \$1.0583 and gave an average bullion value to the silver dollars of 81.85 cents.

The Sherman law produced temporarily an influence on the price of silver. The average monthly price at New York in January, 1890, was \$0.9751; the average price in June was \$1.0575, which rose in July to \$1.08942; in August to \$1.16995; and in September to \$1.1656.* The effect of this enhancement of the price was to draw silver from every quarter of the world to the United States. The silver pesos of Mexico, the worn Spanish and local coins of South America, and the rupees of India flowed to New York, where they were melted into bars and offered to the Treasury as bullion. This appearance of old hoards inevitably produced a reaction in the price of silver. The average price in October, 1890, dropped to \$1.10315. From that time onward, with trifling fluctuations, the course of prices was steadily downward, until the average London price was only \$0.988 per ounce for the calendar year 1891 and \$0.87145 for 1892. Then came the decision of the British Government to close the mints of British India to the free coinage of silver, and a panic in the United States resulting in part from the revelation which this incident afforded of the weakness of silver as a basis of circulation. The provision of the act of 1890 for the monthly purchase of silver bullion was repealed by the

* The highest price reached was \$1.21 on September 3. Mr. Noyes accounts for a part of the rise by declaring that "The speculators promptly put their machinery in order, and by way of affording every possible facility to a speculative craze, the New York Stock Exchange arranged for the deposit of silver bullion and the issue, against such deposits, of negotiable certificates which could be bought, sold and delivered on the Exchange like any other security."—"Thirty Years of American Finance," p. 153.

act of November 1, 1893, passed at a special session of Congress called by President Cleveland for the purpose.

The total purchases of silver under the act of 1890 were 168,674,682.53 fine ounces, representing a cost of \$155,931,002.25. The last figure represents the amount of the issue of Treasury notes in payment for the bullion purchased. The average price paid per fine ounce for the entire amount, in spite of the high prices of the autumn of 1890, was only 92.44 cents, representing an average bullion value for the silver dollars of 71½ cents.

The operation of these two acts of Congress was a disappointment in every respect to the advocates of bimetallism. They contended, by way of explanation, that these laws were less influential upon the price of silver than would have been the opening of the mints to the free coinage of the metal. While this contention may have had some force, it was evident that the United States were incapable of raising silver under any circumstances to a parity with gold at a ratio of 16 to 1, since purchases of silver larger than the aggregate production of the world in any year prior to 1890 had done little more than afford a temporary parachute to break the accelerating fall in the value of the metal.

ABANDONMENT OF THE BIMETALLIC SYSTEM BY FRANCE AND THE UNITED STATES.

France and the United States thus afford in their monetary history the nearest approach to the successful operation of the bimetallic system. The fact that the system broke down in both countries and had to be abandoned, in order to avoid the loss of gold and the prevalence of the single silver standard, seems to demonstrate historically that it is not in the power of a single nation to give rigidity of relationship by its laws to money of two different metals when it is optional with the owner of bullion of either metal to have it converted into legal tender money. The same experiment on a smaller scale in other countries has been equally disappointing. Even before the theory of bimetallism was conceived of as a definite economic policy, the attempt to float coins of two metals with full legal-tender power had been defeated in a manner often mysterious to the public authorities by the instinctive promptings of self-interest among individuals. Thus, Sir Thomas Mun declares* regarding the English legislation of Elizabeth:

"We have seen by experience that the late raising of our Gold ten in the hundred, did bring in great store thereof, more than we were accustomed to have in the Kingdom, the which as I cannot deny, so do I likewise affirm, that this Gold carried away all or the most part of our Silver, (which was not over-worn or too light) as we may easily perceive by the present use of our Moneys in their respective qualities: and the reason of this change is, because our Silver was not raised in proportion with our Gold, which still giveth advantage to the Merchant to bring in the Kingdom's yearly gain by trade in Gold rather than in Silver."

Governments themselves in those early days acted from the same motives, in preferring the cheaper to the dearer metal, which acted upon the minds of the merchants and money changers. Mints open to the public are a comparatively modern phase of Government coinage.† As Prof. Thorold Rogers

* "England's Treasure by Foreign Trade," p. 42.

† The English free coinage act was passed in 1868. The text is given in the Report of the International Monetary Conference of 1878, Sen. Exec. Doc. 58, Forty-fifth Cong., 3d Session, p. 300.

declares, the English mint was looked upon as a department of the Exchequer. It received money in payment of taxes and dues and in coining what it needed for the expenses of the Government, "it coined, we cannot doubt, that metal which it could procure at the cheapest rate, in preference to that which cost more."* Fourteen times as much gold was coined as silver from 1701 to 1724, by reason of the overvaluation of gold by the English coinage ratio. Such silver as remained in circulation consisted of the worn pieces which lacked the value as bullion belonging to the pieces of full weight. Nowhere did the two metals circulate long side by side where both were freely coined. In many cases restriction of the coinage of one metal or the other changed the relations which they might have had as bullion under the policy of free coinage, but wherever the actual bullion value of a coinage was above its exchange value, it tended to disappear from circulation under the manipulation of the money changers almost as quickly as under modern conditions of organized markets and telegraphic and cable transfers. Bimetallism, continuously and successively operative, is not to be found in economic history, ancient, mediæval or modern. It will remain to discuss in another article whether it would be possible by the concurrent agreement of many nations.

CHARLES A. CONANT.

* "The Industrial and Commercial History of England," p. 325.

NEW MEXICAN BANK.—New York and other capitalists are reported to be organizing a Mexican banking company which will have control practically of the finances of that country. In addition, there are to be a number of branch banks in the United States. The Mexican bank has been named the Pan-American Bank and Trust Company.

The capital is \$15,000,000. The concessions received from the Mexican Government permit the issuing of bonds to the extent of twenty times the amount of this capital, making a possible working capital of \$300,000,000.

GOLD STANDARD IN PERU.—The State Department has been notified by United States Minister Dudley that Peru has successfully put in operation the law passed two years ago providing for the adoption of the gold standard on March 1 of this year. The unit is a Peruvian pound, identical in weight and fineness with the British pound. It is to be kept at a parity with ten silver soles. The country is said to be in splendid financial and industrial condition.

BRANCH BANKING.—Although branch banking is not permitted under the National Banking Law, a number of the States allow branches of State institutions, and there are also in the country a number of branches of foreign banks. In the absence of State prohibition of branches of foreign banks, there does not seem to be any obstacle to the formation of a great central bank in a foreign country, like Canada or Mexico, for instance, which could establish branches all over the United States. It is probable, however, that if the branches of foreign banks should ever become sufficiently numerous to compete seriously with existing banks, State or National, they will encounter legislative hostility. Heretofore, the branches of foreign banks have been too few to attract much attention, and as a rule, they have engaged chiefly in dealing in foreign exchange instead of doing a discount and deposit business.

PROVIDING A MARKET FOR UNDIGESTED SECURITIES.

Although the prospects of legislation for the reform or modification of the bank currency at the next session of Congress do not appear to be very bright, it looks now as if a great effort would be made to secure authority for the use of State, municipal and railroad bonds, as an additional basis of security. It seems impossible as yet to bring about that state of public opinion necessary to successful legislation, which will abandon the principle of bonded security of some kind.

While there may be a wise conservatism in an attitude averse to the abandonment of the security principle in bank circulation to install what is known as asset currency, yet it would be unfortunate if this attachment to the security principle be used to exploit all kinds of State, municipal and railway bonds. The present National bank note owes its one acknowledged excellence, viz., security, to the fact that United States bonds only have been used as the basis of the issues. The banks receive their notes from the United States Government and they place in the hands of the Government bonds representing the indebtedness of that Government. In return the Government engages to pay the bank notes if the bank fails to do so. For this guarantee the Government has its own debt. If a bank fails its notes are presented for payment at the Treasury of the United States. The Treasury reimburses itself for the payment by selling the bonds. But even if the bonds were unsalable the Government could reimburse itself equitably by canceling the bonds.

When the United States Government grants its guarantee for the payment of bank notes, and relies for security on State, municipal and railway bonds, the case will be very different. Even if these securities should be looked upon by the general public as equal to United States bonds, although this is highly improbable, yet there would be several reasons why the Government might be in danger of loss if securities other than those representing its own indebtedness were accepted. There is, first, a more universal knowledge about the bond issues of the United States; they cannot be increased or diminished without the widest possible publicity. On the other hand, State, municipal and railway bonds, placed together in a general class, might be increased under circumstances that might not insure public knowledge. Congress would be very unlikely to authorize issues of bonds simply that they might be used as a basis of bank-note circulation. But it is to be feared that if the principle of using securities other than national as the basis of National bank-note issues be adopted, the issue of such securities would become liable to abuses which would never occur with United States bonds.

If this new principle be adopted the banks will naturally select the cheapest securities they can be sure will be accepted by the Treasury. No doubt at first only the better securities will be selected, but by degrees the Treasury authorities will be brought under a political pressure which will surely if not swiftly deteriorate the security. United States bonds are United States bonds,

and there was no way by which any advantage could be secured in their deposit. They were an indebtedness of the United States, and even if their market value had depreciated the Government was still secure, as in paying the bank notes guaranteed, the Government cancelled its own debt. With State, municipal and railway bonds, it would be altogether different. Suppose the market value of bonds of this class should be practically wiped out, the Government would have no way to reimburse itself for payment of guaranteed notes. But it may be said that the Government will not guarantee notes based on State, municipal and railway bonds as it guarantees notes based on United States bonds. If it does not a change in the system will be effected almost as radical as if a change were made from a circulation secured by bonds to an asset currency. Under the present system the public looks directly to the Government, which promises to pay the bank notes, and further says, "I have secured myself by taking my own bonds, of which the value to me is always the same as announced on their face." If State, municipal and railway bonds are accepted as security for bank notes, and the Government does not assume absolute responsibility for the payment of the notes, its relations with the general public taking the notes would be entirely different. The Government could under such circumstances only say that as trustee it would sell the securities for what they might bring and guarantee that the proceeds were applied to the payment of the bank notes, to the greatest extent possible. It would probably be unconstitutional for the United States Government to guarantee a payment for which it was not absolutely secured.

Another consideration pointing to the insecurity of State, municipal and railway bonds is the great diversity of their character. It is sought to overcome this objection by requiring in the bonds accepted by the Treasury a conformity to certain conditions. In this way a sort of artificial unity of character is sought to be established. But where there is diversity in the character of securities there will be great differences in price. The bonds of each State are issued on the credit of that State, and there will always be variations in the credit of forty-five States. The municipalities of the country are almost without number, and the railways are almost as numerous. In all these municipalities and corporations there is ample scope for the manufacture and sale of securities for circulation purposes that will conform to the letter of legal requirement, and yet not warrant public confidence. The banks will buy the cheapest securities they can obtain, so long as they are acceptable under the Treasury requirements.

It is no new thing in the financial history of the country for the promoters of enterprises and those who have loaded up with securities which do not as yet command public confidence, to appeal to the Government to aid them. When Nicholas Biddle found the Bank of the United States swamped by the securities taken for loans and debts, he appealed to the Government to invest its surplus in these securities, and attempted to show what a revival of business would follow if the Government would only carry the securities which the public stomach was too feeble to digest.

The persistence with which this plan for permitting securities other than United States bonds to be accepted as a basis of National bank notes is urged, seems to suggest a similar desire at the present day to have the Government boom the prosperity of the country by affording a market for undigested securities. The modern plan is as much in advance of the crude suggestions of

Biddle as the electric car is superior to the omnibus. It is more plausible, and takes advantage of a strong public sentiment for a bank-note circulation secured by bonds and averse to the alternative of an asset currency. The suggestion is like that of the storekeeper who, while he is out of the exact article required, has something just as good. The public recognizes that the country is out of the United States bonds necessary as the basis of bank notes. It looks with suspicion on a bank note based on assets. Then come the advocates of State, municipal and railway bonds. The public is likely to be deceived and think these bonds are just as goods as United States bonds, when they are not. The holders of the so-called undigested securities, if they are not directly behind this proposal, have every inducement of private interest to look favorably upon it. The State, municipal and railway securities once absorbed by the banks, the general public will have to look for other investments, and thus a market will be made for the securities now oppressing the markets with their lack of buoyancy.

Of course, if the use of bonds other than United States bonds was intrinsically a sound proposition, there could be no objection to it, because its influence would be favorable to other securities. But it is in reality a plan fraught with greater dangers than any asset currency plan yet propounded. A plan that affects to give absolute security and does not in reality do so is more dangerous than a plan like that for asset currency, of which certain risks are recognized and provision made to meet them. If banks as institutions are primarily intended to uphold the credit of investment securities, then circulation on bonded security ought within limits to be encouraged. But if the chief function of banks is to effect exchanges, then circulation based on other principles is better calculated for the purpose.

To continue a system of secured circulation by the use of State, municipal and railway bonds, will impair the usefulness of the banks of the country to the business public for many years to come.

ONE OF THE BEST.—H. A. McKenzie, Cashier of the Security State Bank, St. Cloud, Minn., writes under date of June 8: "I have not received my May number of *THE BANKERS' MAGAZINE*, and wish you would look it up, as I cannot possibly get along without it. It is one of the best publications for bankers that I have ever seen."

GROWTH OF INTERNATIONAL BANKING.—As was expected, the extension of American banking enterprise is following the territorial expansion of the country. Several large banking corporations have been organized already, the latest to be announced being the Pan-American Bank and Trust Co., an Ohio corporation, with a capital of \$15,000,000. According to newspaper reports, it will absorb the business of a large Mexican bank.

It has been repeatedly urged that an international bank should be chartered by Congress, as National banks are not permitted to have branches. Doubtless such an institution would have some prestige; but it seems that the institutions formed under State laws are capable of meeting all the requirements of international banking without a grant of a monopoly charter by Congress. Necessarily, such banks must be strong and of large resources to compete successfully with existing institutions.

That our commerce with other countries will be greatly benefited by the introduction of American banking facilities in the principal trading countries of the world seems to be admitted by those who have carefully studied the subject. Banking in the Orient, especially, has generally yielded substantial profits. Although the returns may decline somewhat with the increase in competition, the field must remain an inviting one for some time to come.

GOLD-RESERVE NATIONAL BANK NOTES.

[Address of Hon. WM. BARRET RIDGELY, Comptroller of the Currency, delivered before the Georgia Bankers' Convention at Atlanta, Ga., Wednesday, June 17, 1903.]

For more than forty years we have had in operation without essential or radical changes a national system of banks with the power of issuing circulating notes. The system has well answered all expectations and accomplished the purpose for which it was designed. The notes issued have in all respects save one been most admirable. No holder of a National bank note has ever lost a dollar except by its accidental loss or destruction, and they have been as free from forgeries and counterfeits as is possible with any issue of paper currency. It was a decided advance and improvement over all previous bank-note currency to provide that the National bank notes should be printed and furnished by the Federal Government, and that they should all thus be made uniform in design, quality and workmanship, and issued under the same laws and regulations. Our people have become so accustomed to these notes, uniform both in appearance and in value and so perfectly reliable, that they will refuse to consider any change which will in any way impair them in these respects.

There has, however, been one vital and serious defect in the system since its very beginning, and that is the entire lack of any elasticity in the volume of the circulation. This was predicted when the act was being considered and debated, and the prediction was fulfilled soon after the establishment of the national system. It is an unavoidable defect in any system of currency entirely secured by bonds. Such a system cannot be made elastic or in any way responsive in its volume to the factors and conditions which should determine such volume. Its changes are necessarily too slow and complicated by too many other considerations, such as the price of bonds, which may have no relation whatever to the supply of and demand for circulating notes. The advantages of basing these notes upon United States bonds at the time of the passage of the bank act were so great that it probably was the part of wisdom to waive the question of elasticity for the sake of the greater advantage. At the present time, however, with the experience of forty years to guide us, and the necessity of providing a market for bonds almost removed, it is certainly wise to try to make such changes as will introduce as much proper elasticity as is possible, if it can be done without in any way impairing the good qualities of the notes.

There are several special and very important reasons why such elasticity is very necessary to our currency system. There is no other country where there is such a great variation in the amount of currency needed for current cash transactions, owing to the vast extent of our territory, our varied interests and enormous business, and the great value of crops and products which have to be moved at certain seasons, calling for very large and varying amounts of cash. There is no other way so good; in fact, there is no other good way to provide this needed elasticity but by means of bank notes if

they can be made quickly available when and where needed, and as quickly redeemed and retired when the work is done and the demand for them ceases.

In our system all the elasticity must be supplied by the bank notes. There is and can be no periodical variation in the amount of coin and coin certificates in circulation which can in any way respond to variations in demand. The volume of our Government legal-tender notes is absolutely fixed by statute and cannot be varied to meet changing conditions. Since all the elasticity in our supply of currency must come from bank notes, it is therefore of vital importance that they be given this quality in the highest degree possible consistent with safety. This should be done with the greatest possible care, in order that the essential qualities of safety and uniformity in value which our bank notes have always had in so marked a degree shall not be lost or impaired, but if this currency can be made more elastic without danger of losing these qualities it should be done at once.

In any plans for making this exchange it is necessary to utilize the present bond-secured currency. We should not, if we could, attempt now to radically change or do away with the present notes. The most conservative and practical suggestion seems to be to make no change in the present bank circulation, but to allow the banks to issue in addition to the present notes a certain percentage of notes uncovered by any bond deposit, but against which the banks should be required to hold in gold or its equivalent the same reserves as against deposits, and at the same time to so add to the laws and regulations in regard to redemption as to provide very ample requirements and means for redemption and retirement. This redemption machinery can and should be made so complete and effective as to lead to constant and frequent redemption of these notes. It is also part of this plan to provide a guarantee fund for the payment of all these uncovered gold-reserve notes. Each bank will be required to pay into this fund five per cent. of its uncovered notes before they are issued, and this fund is to be maintained by a tax on this circulation. The proportion of uncovered gold-reserve notes proposed varies from twenty-five to fifty per cent. Fifty per cent. could be permitted with safety, but twenty-five is enough to supply a considerable element of elasticity, and it may be well to begin with the smaller amount.

UNQUESTIONED SAFETY OF THE PROPOSED NOTES.

It has been frequently shown, from the figures based on the experience of forty years, that a comparatively small tax will produce a guarantee fund which will make every bank note absolutely safe in the hands of the holder. No one need ever know the name of the bank issuing a note or whether it is solvent or insolvent. He may be sure it will be redeemed for its full face value in gold or its equivalent. These figures have been published so often it hardly seems worth while to repeat them, but there have been so many objections, based on the possibility of impairing the safety of the notes, that I give some of them again. The notes of all National banks which have ever failed amount to about twenty million dollars, while the banks have paid in taxes on circulation over ninety million dollars. If there had been no bond security and no assets in the banks, these taxes would have paid about four and one-half times the amount of all the notes of these insolvent banks. For the whole period from 1863 to 1901, inclusive, a tax of twenty-two hundredths of one per cent. (0.22 per cent.) on the outstanding circulation

of all the banks would have paid off the notes of all the insolvent banks if there had been no bond security and no assets in the banks which failed.

If, as the present law provides, the notes were a first lien on all the assets, a tax of eight-one-thousandths (0.008), or one one hundred and twenty-fifth of one per cent., would have paid all the notes which could not have been paid out of the assets. The five per cent. guarantee fund which it is proposed to provide before any uncovered notes are issued would on this basis pay all the notes above the value of the assets of the insolvent banks for six hundred and twenty-five years if the proportion of failures remained the same. But, it is argued, conditions may vary, and these figures are based on experience with entirely different bank notes. It is not conceivable that conditions can so change that these most extraordinary margins of safety will not be ample. The figures are so conclusive that the question of the safety of the notes in the hands of the public may be taken as established. The smallest tax which is proposed for the guarantee fund would be very ample to secure perfect safety. This tax can be so small that any bank can afford to pay it without raising the question as to whether it is paying to guarantee the circulation of a weaker bank or not. It need make no difference whether the tax is turned into the Treasury of the United States as at present or used to guarantee the redemption of the notes of other banks.

INFLATION TO BE PREVENTED.

But the argument most frequently seen in the press and heard in conversation against uncovered gold-reserve notes is that their issue will lead to a great inflation of the currency. This is a most serious objection; and, if it is true that it would lead to inflation, it is such a fatal objection that the plans should at once be abandoned forever. After going through all the dangers and trials of the greenback and silver craze, and having firmly established our financial system on the gold standard, it would be the height of criminal folly to introduce any change in our currency laws which would lead to a paper-currency inflation. If we consider carefully, however, the provisions under which the proposed uncovered notes are to be issued, and, above all, if we bear in mind that these notes are not to be counted as bank reserves; that the issuing banks are to be compelled to carry an ample reserve in gold or its equivalent against them, and, further, that provision is made for such constant and frequent redemption that the notes cannot stay out any longer than they are required for current cash transactions, we will be forced to the conclusion that there is no danger of undue inflation. On the contrary, this change in our currency laws will introduce more factors which lead to contraction than to expansion. Both are necessary in any good currency, and if fact, if there is any difference, contraction is more necessary than expansion, or at least should be made the easier of the two. Conditions should be such that when there is no strain there should be a gradual contraction and just enough currency be left in circulation to furnish current cash. Then when the demand increases for any reason, expansion will quickly and easily follow. The trouble with our present bank notes is that both processes are too slow and difficult, the contraction being actually limited by statute to \$3,000,000 per month.

In considering these questions there are a few fundamental principles which should be clearly kept in mind. They are not new—few, if any, good

financial ideas are—novelty being one of the least desirable qualities in currency plans or laws. We are apt to lose sight of them, however, or become confused in their application.

There are two general uses for money or currency in our modern business, which is so largely based on credits and in which comparatively few transactions are carried out by the actual use of money:

The first is for use as bank reserves against deposits or circulating notes.

The second is for the daily current cash transactions and the payment of balances.

BANK NOTES NOT A PROPER RESERVE.

Bank notes should never be used for reserves, their true use being for current cash business only. Bank reserves should be gold, or some paper certificates which can be quickly converted into gold. As long as the greenbacks are in circulation and the United States carries a large gold reserve for their redemption, they may be considered as practically gold certificates and used for reserves. This is not a good arrangement, but as long as we have these legal-tender Government notes in circulation as part of our system, the banks should be allowed to use them for reserve. We may also have to continue to use the silver dollars and the silver certificates as bank reserves. Through the mistakes of our silver legislation, we have this silver on our hands, and the Government will for many years have to bear the burden of it. Having once shouldered it and provided for it, we must make the best of it for the present. It will make the silver much better for reserves if Congress, as it should, makes it specifically redeemable in gold.

The gold coin and certificates and the clearing-house certificates for gold deposited are ideal bank reserves. As soon as it can be done, the greenbacks should be redeemed and retired, the silver also disposed of, and nothing but gold and gold certificates used as bank reserves. When this is done, we shall be solidly and firmly on a real gold standard basis, and our financial system be such as we should have to take our proper place as the leading commercial nation of the world.

Bank notes are not money at all, but mere promises to pay money, which are used for currency. They should never, under any circumstances, be counted as reserves for either National or State banks. It is surprising how often the suggestion is made to permit this. Very recently an officer of one of the largest banks in New York told me he thought the three-million-dollar limit on retirement should be repealed, and the banks authorized to count notes of other banks as reserve. He gave the usual reason that the bank notes are much better than the greenbacks, as the bank's credit adds everything to the Government bond security. There could hardly be a greater mistake than to ever use bank notes as reserve. Not that they are not good and safe enough, but that it removes all inducement for any one to send a bank note home for redemption, and puts an end to all possibility of making our currency elastic. Instead of decreasing the inducements for redemption, they should be increased in every reasonable way.

The only proper use of bank notes is for the current cash transactions necessary in the business of the community. Bank notes are the best possible form of currency for this use if made properly elastic and responsive to the demand. The composite result of each bank supplying to its own cus-

tomers what currency they need, and these customers presenting it for redemption when not needed, is the best way to regulate the amount of currency which should be in circulation. It is infinitely better than any regulation by statute or by any officer of the Government. Such a currency would be more efficient and more economical. It would save expensive transfers of currency from distant parts of the country. It would lessen the liability of disturbance in all our financial affairs and would be a source of strength in case of threatened or actual trouble. It would be better than an emergency circulation; it would prevent many emergencies and be a great help in meeting any which might arise. It would lessen the danger of both expansion and contraction and prevent inflation of the currency. A currency not available for reserves and protected by gold reserves and ample facilities for redemption would not be made the basis for undue inflation of credits or used for speculation. It would only be used for those legitimate enterprises which have a proper basis of credit, and only to furnish the cash as long as it was needed for cash transactions.

We cannot by legislation increase the supply of money which should properly be used for bank reserves. The addition to our currency in circulation of such an amount of uncovered gold-reserve bank-note currency as the banks could keep out would add to the available reserves part of the reserve money now outside the banks for use in current cash transactions. But a large part of this would have to be used as reserve against the gold-reserve notes, so that it would not add such an amount to our bank reserves as to lead to undue inflation. The banks can just as well and safely be trusted to issue such gold-reserve currency as they can be trusted with deposits to be loaned to their customers. They will only pay it out for value, and will, in self-protection, be more careful about loaning it than they now are, because they must provide reserves and must always count upon its being sent back for redemption when no longer needed.

Owing largely to the kind of paper which we have had in circulation for forty years, the popular idea of paper currency has become perverted. The Government has the power to issue and to keep in circulation a large amount of currency. It can be issued by paying it out for the Government expenses. As it comes back it can be paid out again, and when revenues exceed expenses it can be deposited in banks, and thus kept in circulation. The bulk of our paper currency has been for so many years Government issues thus kept in circulation that it has come to be assumed that if any given amount of currency is authorized it will at once be issued and maintained in circulation. This, however, is not true of bank-note circulation not available as reserves and for which prompt and constant redemption is assured. A bank has no such means of putting its notes in circulation as the Government. Its expenses are comparatively very small, and it can only pay out notes in exchange for value of some kind. If paid out in exchange for the note of a customer or in payment of a check against deposits, notes will only stay out as long as they are needed for cash transactions. As soon as the demand slackens, the notes will either come back to the issuing bank or be deposited in some other bank. This bank will, as soon as possible, send them for redemption, so as to convert them into something which can be counted as reserve. The notes must be easily and promptly redeemable in gold or its equivalent. This is the vital point of the whole plan, and is the most potent

force with which to make the bank-note currency elastic and automatically elastic. When currency is wanted, the banks can and will supply it. When the supply of notes exceeds the demand, they must redeem the notes and retire them until needed again. If the same reserve is required to be maintained against the gold-reserve notes as against deposits, it will make no difference to the bank whether a borrower takes the notes of the bank away with him or leaves the proceeds of his note on deposit with the bank, except so far as the note circulation is taxed by the Government. It is the very fundamental principle of bank-note circulation that there is no difference to the bank between the bank-note credit and the deposit credit. They are both obligations of the bank and exactly the same thing so far as the bank is concerned. It is only a question of the convenience of the customer whether he leaves the credit in the shape of a deposit to be checked against or takes the notes to be used as cash. It is not so much a privilege of the bank to issue the notes as it is a privilege of the customer to do whichever suits him best.

PERFECT SAFETY AND ELASTICITY ATTAINABLE.

It is important that it shall be thoroughly understood that there is no difference between the deposit credit and the bank-note credit, and that bank notes which are protected by a gold reserve, quickly and easily redeemable, and not available for reserves will not stay in circulation in greater volume than is needed for current cash transactions. With these principles fixed in our minds, there will be no justifiable fear of inflation from such notes. Any bank which can be trusted with deposits can be trusted to issue the notes. The guarantee fund will make the notes of any bank safe in the hands of every holder, no matter what happens to the bank. The main safety of the whole system, however, is the gold reserve and the constant current redemption. Constant and frequent redemption cannot be too strongly insisted upon. The notes must be perfectly free to come and go, and thus freely follow supply and demand.

The notes of the Suffolk bank system were the best paper currency we ever had in America, and they were kept good by the frequent redemption, although they were purely credit notes. The system grew and was successful without Government aid, because it was based on correct principles. The worst bank notes we ever had were the "wild cat" bank notes in the West, which were bond-secured. In the States where they required reserves and provided for current redemption the bank notes were good, but where they depended on the bond security they were very bad.

The chief trouble with our present bank notes is that the supply is hardly regulated by the demand in the slightest degree. It mainly depends on the price of bonds, and the profit on circulation is so very small that the banks are compelled to figure to small fractions to see whether it pays or not. The issue of circulation instead of being the exercise of one of the most proper and useful functions of a bank, in supplying currency as needed by the people, becomes rather a speculation in bonds, and there is thus introduced into the regulation of the volume of the currency factors which have no proper relation to it whatever.

The Secretary of the Treasury has recently very wisely and properly encouraged the increase of circulation in anticipation of the demand which may be hard to supply next autumn. The outstanding notes are now for the

first time over four hundred million dollars. No one can tell whether this is enough or too much, or how much more it may be by September or October next. How much better it would be if we had a system which would automatically adjust this amount, each bank supplying its own customers when and as needed. There is far more danger of inflation through these bond-secured notes becoming redundant than there would be if the banks could issue a portion of their circulation in uncovered gold-reserve notes with such proper redemption requirements that they would retire themselves when no longer needed, and could only be kept out by exertions on the part of the bank, and then only as long as they were demanded by the public for current cash transactions.

Objection is frequently heard to a great number of small banks, widely scattered, issuing uncovered notes. On thorough consideration this objection does not seem to be serious, and there are some counterbalancing advantages. The notes being furnished by the Government, there is no danger of fraudulent over-issue. The proportion of uncovered notes to the capital of the bank proposed is not large, and the regulations could be made such as to remove the temptation to organize the banks for the note issue only. The constant redemption spoken of so often would check this. Those of you who remember the time when you had notes out which you were constantly looking to have presented for redemption doubtless realize that such notes are a source of considerable anxiety and solicitude. These small banks are now allowed to take unlimited deposits. The notes will be safer than the deposits on account of the guarantee fund. If the banks are fit to take unlimited deposits, they are fit to issue a limited quantity of notes, protected by a gold reserve. One chief advantage of the issue by the great number of banks is that the gauge of the quantity needed by widely scattered banks, each in close touch with its own customers and community, would be the best possible way to determine the proper amount required. They would feel and supply the demand more quickly and collect and retire the notes more promptly, quietly, and with less disturbance when no longer needed in circulation.

CURRENCY LEGISLATION NOT A FINANCIAL PANACEA.

It is not claimed by the most enthusiastic advocates of this change in our currency that it will cure all our financial ills. We cannot prevent by any means yet known speculation and overtrading. It seems to be a fixed law in all human affairs, and especially in business, that events run in cycles, and that we are bound to have periods of too great activity, followed by corresponding periods of depression. Modern business is the result of the development of credit, and must be done largely on credit to be done at all. There never is a time when there is money enough to liquidate all outstanding credits or even any large part of them. We are thus always exposed to the possibility of some unexpected and unavoidable event leading to such a demand for liquidation that many who have debts cannot meet them, and this leads to a panic or crisis, which is followed by a period of depression in all lines of business and trade. It is idle to expect to cure or change this by legislation, but we may by proper financial and currency laws remove some of the causes of disturbance and diminish the chances of sudden demands for liquidation. We are confronted with a situation in business to-day, one of the dangers of which is the fear of a demand for currency next autumn which may check

business of all kinds. Being forewarned and expecting it, every one is now making every possible preparation for it, and in this there is much reason for hope that serious trouble may be avoided. It may be said that this situation is not due to our currency laws, but to entirely different causes. This may be, and doubtless is largely true. But our currency and banking system is a great factor in the situation, and if we had a better and more elastic bank currency, it would be a source of strength now when needed. If our banks had been in the habit of supplying the varying demands for currency and an automatic elastic system were in operation which all knew would take care of the demand as it came, there would have been no necessity of extra endeavors being made by the United States Treasury to increase the circulation and less danger of inflation from such a circulation as could then be issued and expanded than from our present bond-secured circulation, which, after it has been expanded, can only be contracted at the rate of \$3,000,000 per month. This is a matter of far greater importance to the people who want and need this money than it is to the banks. A man who wants currency for his business and cannot get it is much worse off than the banker who cannot furnish it. It may only mean a loss of profit to the bank when it means ruin to the customer.

The people who want this currency for handling their crops and products are entitled to the credit based on the wealth of marketable articles they have produced. They are entitled to it in the shape which is most convenient to them, whether as a bank deposit, subject to check, or current cash. It is the duty of the Government to supply them with the best facilities which can be devised, and to enact such laws as will enable the banks to serve their customers to the best possible advantage to the whole country. This question is a matter of equal, if not greater, importance to the entire business community, who find every year their calculations interfered with, if not overthrown, by the annual disturbance which is due to the demand for currency to move the crops. That we allow this to go on year after year without any attempt to cure or stop it is an absolute disgrace to us.

There is a more urgent necessity in the South for the aid of good banks in the development of your resources and business than in any other part of the country, and you have comparatively fewer banks. It is of vital importance and value to you that the banks you have be given the very best possible facilities, and that their power for good and their efficiency be increased to the highest limits, consistent with safety and sound banking. Through unfortunate circumstances, much of your development has been arrested and delayed, but it can no longer be held in bounds. The natural advantages placed here by Providence in your fine soil, splendid climate, your mines of coal and mineral wealth, your great and valuable forests, your harbors, navigable rivers, and water power, have not yet been utilized as they can and will be. The loss of the passing generation is the opportunity of the present, and in no part of the country to-day are such opportunities open for agricultural, mining, industrial, and commercial developments as in the Southern States. There has never before been a time when the South offered such great and certain rewards for capital, industry, enterprise, and ability. This splendid prospect lies open before you, and success is assured; but it will come more quickly if you have to aid you all the good facilities to which you are entitled, and among them of first importance are the best improvements in our banking and currency systems which can be made.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the *MAGAZINE'S* Law Department as early as obtainable

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

EFFECT OF CREDITING CHECK—UNSTAMPED CHECK.

Supreme Court of Pennsylvania, January 5, 1903.

BRYAN vs. FIRST NATIONAL BANK OF MCKEES ROCKS.

Where a bank gives a depositor credit for a check drawn upon it by another depositor, such credit is equivalent to a payment in cash of the amount of the check.

Where such a check has been so credited by a bank it cannot afterwards avoid the effect of the transaction by showing that the check was given for a gambling debt, or was unstamped.

Assumpsit against a bank for wrongfully charging off on its books a credit given to a depositor. At the trial the court refused defendant's offer to prove that the checks deposited by the plaintiff represented a gambling transaction. The court admitted in evidence the two checks, although it appeared that they were not stamped.

BROWN, J.: On November 9, 1900, John J. McCann drew to the order of Miles Bryan, and delivered to him, a check on the First National Bank of McKees Rocks, Pa., for \$956. The day following he gave Bryan another check on the same bank for \$1,164.75. On that day Bryan, who was also a depositor in the bank on which the checks had been drawn, went to it, and made a deposit of \$2,357, composed of these two checks and other small checks and some cash.

At the time he made this deposit the books of the bank showed a credit in favor of McCann of \$3,276. The two checks which he had given to Bryan, amounting to \$2,120.75, after having been passed to the latter's credit as part of his deposit of \$2,357, were stamped "Paid" by the bank. Part of the amount standing to the credit of McCann on the books of the bank was made up by his deposit of two checks drawn to his order by E. A. Meyers & Co. The first dated November 9, 1900, for \$1,527.35, was deposited the same or the following day; and the second, given November 10, 1900, was for \$861.70.

After Bryan had received credit for the two checks McCann had given him, and which had been stamped "Paid," the bank learned that the checks of E. A. Meyers & Co. to McCann, which had been deposited to his credit, were not paid by the Freehold Bank, on which they had been drawn, and they were subsequently returned, marked "No funds." Bryan made his deposit and received the credit in his pass-book on Saturday, and on the following Monday the bank charged the two McCann checks back to his account, returning them to him.

Subsequently this suit was brought to recover from the bank the amount so withdrawn by it from appellee's account, on the ground that, having given

him credit for the two checks drawn by McCann on itself, with ample funds in its hands to meet them, according to its own books, when they were presented, it had made practically a cash payment to him, which it could not recall without his consent. The trial judge entertained this view, and in an adequate charge submitted to the jury, as the only question for their determination, whether the plaintiff had agreed that the money represented by the McCann checks should be charged back to his account. The jury found that he had not so agreed, and the verdict was in his favor for the amount claimed.

When the bank gave to Bryan, one of its depositors, credit on his pass-book for the two checks drawn on it by another of its depositors having on its books ample funds to pay them, such credit was equivalent to a payment to Bryan in cash of the amount of the checks. This has never been questioned with us from the time it was first decided in *Levy vs. Bank of the United States*, 4 Dall. 234, 1 L. Ed. 814, and 1 Bin. 27, and it cannot be pretended that, if an actual cash payment had been made to Bryan by the bank, there could be a recovery back from him, if unwilling to pay it.

The two legal positions taken by the defendant, which the court below refused to sustain, were: First, that the court ought not to have admitted in evidence the two checks drawn by McCann in favor of Bryan, because they had not been stamped as required by the act of Congress; and, secondly, that the defendant ought to have been allowed to prove that these checks "were given in a gambling transaction, commonly known as a 'bucket-shop' business, and conducted by E. A. Meyers & Co., with John J. McCann as an interested party therein, with full knowledge of the plaintiff in this case, who dealt with McCann, and through him with Meyers & Co., in carrying on that bucket-shop business contrary to public policy."

As to the first position, appellant seems to overlook the fact that this suit is not on the checks. The plaintiff could not sue on them. As a holder of checks on a bank, drawn by one having funds in it to meet them, he could not sue it. (*Saylor vs. Bushong*, 100 Pa. 23; *First National Bank of Northumberland vs. McMichael*, 106 Pa. 460; *First National Bank vs. Shoemaker*, 117 Pa. 94; *Maginn vs. Dollar Savings Bank*, 131 Pa. 362.)

The plaintiff sues to recover money which the bank had paid him by depositing it to his credit and then took from him without his consent. This is the substance of his averment in his statement. The checks were not offered in evidence as the basis of his claim, or as instruments upon which he had sued. His case was complete without them, for his pass-book showed the credit given him by the bank. Knowing that the drawer of these unstamped checks had, according to its own books, money in its hands to pay them, it received them as money from Bryan, and gave him credit for them. Instead of complaining of them now as not having been stamped, it ought to have refused to pay them when presented, for that was its duty under a penalty. But it paid them. The act of Congress was intended for no such case. It did not prohibit the offer in evidence of unstamped checks as such. These were offered not to establish and sustain the plaintiff's claim, for, as stated, it had been established by the bank's entry in his pass-book of so much cash deposited by him and withdrawn by the bank without his consent. The prohibition of the act of Congress was upon the offer of checks as evidence when relied upon as valid instruments for the purpose for which

they were drawn, and was not that it could not be shown what use had been made of them by parties against whom they could not be enforced by the holders. If, as in this case, the bank saw fit to pay unstamped checks, the act of Congress never intended that it could say the checks had not been paid, and that the money represented by them was still in its hands because the checks had not been stamped.

In *Chartiers & Robinson Turnpike Company vs. McNamara*, 72 Pa. 278, the instrument rejected by the court because it had not been stamped in accordance with the act of Congress was one upon which the defendant relied as the real contract between him and the plaintiff; in other words, it was the instrument upon which its defense depended. Such is not the case here.

The checks given by McCann may have been drawn in settlement of marginal deals, but he did not say they should not be paid. He gave them intending that they should be paid, and the bank upon which they were drawn would now become the quickener of his unwilling conscience for the purpose of saving itself from the consequences of what may have been its own mistake in giving him credit for the checks of E. A. Meyers & Co. Even the ordinary gambler is not required to get the permission of the bank with which he keeps his account to withdraw his money to pay his gambling debts, regarded by him, as a rule, as obligations of honor. This is about the position of the appellant as we understand it, and as the court below must have understood it. Judgment affirmed.

CHECKS—FORGED INDORSEMENT—LIABILITY OF BANK CASHING SAME.

Court of Appeals of Kentucky, April 30, 1903.

MEYER vs. ROSENHEIM & CO.

Where a bank cashes a check upon a forged indorsement, and collects the money upon the check, it is liable to the holder for the amount thereof.

The action in such case is not based upon the writing, but upon the theory that the bank has converted the property of the true owner, and cannot retain the proceeds.

HOBSON, J.: Appellees are wholesale merchants in Louisville. They had in their employ a bookkeeper named Altman, who forged their name on the back of checks belonging to them, and then delivered the checks to appellant, who paid him the money on them or sold him jewelry therefor. Appellant then collected the checks from the banks on whom they were drawn. Appellees, on discovering the forgery and the misappropriation of their property, brought this action against appellant to recover of him the amount he had collected on these checks belonging to them under the forged indorsement of their name by Altman. The checks amounted to \$227.92. On final hearing the court gave judgment in favor of the plaintiffs.

There is no plea of estoppel, and we see nothing in the evidence to warrant an estoppel if pleaded. Appellees were not required to anticipate a forgery. The bookkeeper had no authority as such to sign the firm's name, and had nothing to do with the checks. He obtained them, in fact, surreptitiously, and without the line of his authority. Appellant appears to have been equally innocent, and so the precise question is on which of two equally innocent persons the loss should fall.

In *Morse on Banking*, section 248, it is said: "If a negotiable instrument having a forged indorsement come to the hands of a bank and is collected by

it, the proceeds are held for the rightful owners of the paper, and may be recovered by them, although the bank gave value for the paper, and has paid over the proceeds to the party depositing the instrument for collection." (See, to same effect, 3 Randolph on Commercial Paper, sections 1469, 1739, 1777.)

The case of *Farmer vs. People's Bank* (decided by the Supreme Court of Tennessee) 47 S. W. 234, is much like this case. There Head, who had possession of a check payable to Farmer, indorsed Farmer's name upon it without his knowledge or consent, and delivered it to the People's Bank, who collected the proceeds and permitted Head to check out the money. After this, Farmer demanded the money of the People's Bank, and, it refusing to pay him, sued to recover the amount collected by it on the check. The court held that the logic of the rule to the effect that a check payable to a certain person can only be properly paid upon his genuine indorsement, or to him, necessarily was that one coming into possession of such paper under a forged indorsement of his name could not successfully resist the title of the true owner, or, if it had been converted into money, a demand for its proceeds. A number of decisions from other States are collected in that opinion. The rule is that a forged indorsement is a nullity.

Appellant's position then in law is the same as if he had taken appellees' checks and collected the money on them without any indorsement of them at all. The collection of the checks by him was a conversion of them, and he who converts the personal property of another is always liable to the owner therefor. Appellant has collected appellees' money. He had no right in law to the money, and he cannot retain it against them. The action is not based upon the writings, but upon the idea that appellant has converted the property of another, and that he cannot retain as against the true owner the proceeds of the property. *Bramblett vs. Caldwell* (Ky.) 48 S. W. 982.

Judgment affirmed.

ACCOMMODATION NOTE—EXTENSION OF TIME—RELEASE OF MAKER.

Supreme Court of New York, First Department, April Term, 1903.

NATIONAL CITIZENS' BANK vs. EMMA IDA TOPLITZ.

Where a promissory note, made by the maker for the accommodation of the payee with the intent that the payee should raise money thereon, is discounted by a bank for the benefit of the payee, with knowledge of its accommodation character, the action of the bank in extending, after the maturity of the note, the time of the payment thereof, without the knowledge or consent of the accommodation maker, does not operate to discharge the accommodation maker.

In such a case the accommodation maker is primarily liable upon the note and the relation of principal and surety does not arise.

The rights of the accommodation maker are not impaired by the extension of the time of payment, as he cannot maintain an action against the payee on the note itself.

On December 26, 1899, the defendant made her promissory note by which she promised, five months after date, to pay to the order of L. Toplitz, Son & Co., \$5,000 at the Chemical National Bank, New York, for value received. The note was indorsed by L. Toplitz, Son & Co. and was discounted by the Ninth National Bank, to the rights of which bank the plaintiff succeeded by consolidation of the two corporations.

PATTERSON, J.: This was an accommodation note, and when it was discounted by the Ninth National Bank that bank had full notice that it was an

accommodation note. It was not paid at maturity, and at the request of the indorsers for whose benefit it was discounted the time of payment was extended without the knowledge of the maker. The complaint is in the usual form of an action upon a promissory note against the maker, with an admitted credit of \$1,000 paid on account. The answer sets up that the note was delivered as an accommodation note for the express purpose of having the same discounted by the Ninth National Bank of the city of New York, and upon the distinct understanding that at its maturity it should be taken up and paid by the indorsers; and that subsequent to the delivery of the note the Ninth National Bank had knowledge that it was given for accommodation; and that after its maturity the Ninth National Bank, without the knowledge or consent of the defendant, entered into an agreement by which it extended the time of payment of the note, and that for a certain fixed time it would not collect or enforce payment thereof.

When the case came on for trial the facts set up in defense were admitted, and the simple question arising was whether as to the plaintiff in the action, the defendant, the maker of the note, stood in the attitude of a surety and was released from her obligation as maker of the note by reason of the extension of the time of payment given to the person for whose benefit the note was discounted, without her knowledge or consent. The trial judge held that the facts thus set up did not constitute a defense, and that the defendant was primarily liable as the maker of the note, notwithstanding the extension of the time of payment. In this ruling the trial court was right. Concededly this was an accommodation note; it was given with the intention that the indorser should raise money on it, on the liability of the maker, and the maker is liable primarily notwithstanding the knowledge of the holder that she was an accommodation maker only. (Neg. Inst. Law [Laws of 1897, chap. 612], sec. 55, as amd. by Laws of 1898, chap. 336.) This note was discounted on the credit of the maker whose very purpose was to become absolutely liable. Thus she became primarily liable. There is no relation of surety. By section 3 of the Negotiable Instruments Law, the person primarily liable is the one who by the terms of the instrument is absolutely required to pay the same, and all other persons are secondarily liable. No other question of liability can arise in this case than such as appears upon the face of the instrument.

The case is entirely unlike that of *Grow vs. Garlock* (97 N. Y. 81), in which it was held that, as between two debtors standing to each other in the relation of principal and surety, the fact being known to a creditor, that creditor was bound to respect such relationship, no matter how or when it arose, or whether he consented to it or not. But the present case, if not determinable by the ordinary rules relating to negotiable paper, is controlled by the third section of the Negotiable Instruments Law. The note was made by the defendant in order that the indorsers might receive money upon her credit. That is the very essence of an accommodation note. That credit was given and the indorser received the money. The maker was thus a principal debtor. She lost nothing by the extension of time to the indorser, for she had no right of action on the note itself as against the indorsers. She could not sue them on the note and she lost nothing of her claim against them, for by paying the note at any time she could have maintained her action to recover from the indorsers notwithstanding the extension of the time of payment of

the note by the bank. On the note itself the maker never could recover against the indorsers. It may be evidence of an indebtedness of them to her, the circumstances under which it was made being shown; but the liability of the indorsers to the maker would arise, not on the note, but out of the original credit given for their benefit and her payment of money on their behalf.

The verdict for the plaintiff was properly directed and the judgment should be affirmed, with costs.

Van Brunt, P. J., O'Brien, Ingraham and Hatch, JJ., concurred
Judgment affirmed, with costs.

CHECK—FORM OF—WHEN VOID FOR WANT OF PAYEE.

Supreme Court of Michigan, May 12, 1903.

GORDON vs. LANSING STATE SAVINGS BANK.

Where a check is made out upon a blank form containing the words "Pay to the order of," and the drawer, instead of naming a payee, or leaving blank the space after these words, or naming an impersonal payee, runs a line through such blank space, the check is void, since it is payable neither to bearer nor a designated payee.

This case was tried by the circuit judge without a jury. At the request of the defendant, he made a finding of facts, which is as follows:

"Monday morning, December 9, 1901, at about nine o'clock, there was presented at the bank of defendant at the City of Lansing for payment the following check, made upon the printed form of check supplied by defendant to its patrons, and signed by plaintiff, viz.:

Lansing, Mich., ——— 190 ——— No. ———. Lansing State Savings Bank of Lansing. Pay to the order of ———, Nine hundred seventy dollars (\$970). Jno. R. Gordon.

The check was indorsed by Charles P. Downey, and was presented by an employee of Mr. Downey, and cash was paid at the time of presentation. The plaintiff had been a depositor at defendant's bank at periods for three or four years, and at the opening of the bank on the morning of December 9, 1901, his balance or credit upon the books of the bank was \$3.40, but during the day \$2,997.50 was added to plaintiff's credit. The day defendant cashed the check plaintiff was at the bank, and was informed that the check for \$970 had been cashed by payment to Mr. Downey, and he then notified defendant he would not accept the check as a voucher for the money paid. December 14, 1901, plaintiff prepared and presented to defendant his check, payable to himself, for \$970, being the amount he claimed to then have on deposit in the bank. Payment on this check was refused by defendant upon the ground that plaintiff had no funds in the bank."

The circuit judge rendered a judgment in favor of the plaintiff for \$970 and interest. The case is brought here by writ of error.

MOORE, J.: Two questions are discussed by counsel: First, the effect of not dating the check; second, has the check a payee? We do not deem it necessary to discuss the first question. As to the second question, it will be noticed the drawer of the check did not name a payee therein, nor did he leave a blank space where the name of a payee might be inserted, nor did he name an impersonal payee.

In the case of McIntosh vs. Lytle, 26 Minn. 336, the court used the follow-

ing language: "A check must name or indicate a payee. Checks drawn payable to an impersonal payee, as to 'Bills Payable' or order, or to a number or order, are held to be payable to bearer, on the ground that the use of the words 'or order' indicate an intention that the paper shall be negotiable; and the mention of an impersonal payee, rendering an indorsement by the payee impossible, indicates an intention that it shall be negotiable without indorsement—that is, that it shall be payable to bearer. So, when a bill or note or check is made payable to a blank or order, and actually delivered to take effect as commercial paper, the person to whom delivered may insert his name in the blank space as payee, and a *bona fide* holder may then recover on it.

These cases differ essentially from the one at bar. In the latter case the person to whom delivered is presumed, in favor of a *bona fide* holder, to have had authority to insert a name as payee. In the former case the instrument is, when it passes from the hands of the maker, complete, in just the form the parties intend. But in this case there is neither a blank space for the name of the payee, indicating authority to insert the payee's name, nor is the instrument made payable to an impersonal payee, indicating a fully completed instrument. It is claimed that the words 'on sight' are such impersonal payee. They were inserted, however, for another purpose—to fix the time of payment, and not to indicate the payee. It is clearly the case of an inadvertent failure to complete the instrument intended by the parties.

The drawer undoubtedly meant to draw a check, but, having left out the payee's name, without inserting in lieu thereof words indicating the bearer as a payee, it is as fatally defective as it would be if the drawee's name were omitted." (See, also, *Rush et al. vs. Haggard*, 68 Tex. 674; *Prewitt vs. Chapman*, 6 Ala. 86; *Brown vs. Gilman et al.*, 13 Mass. 160; *Rich et al. vs. Starbuck*, 51 Ind. 87; *Norton, Bills and Notes* [3d Ed.] p. 59, and notes; *Daniel, Neg. Inst.* [4th Ed.] Sec. 102).

The case differs from the one at bar in some respects, but the important part of the decision is that a payee is necessary to make a complete instrument, and, even though the maker of a check may have intended to name a payee, if he has not in fact done so the check is incomplete. In the case at bar the failure to name a payee was not an oversight, if we may judge from what Mr. Gordon did, as will appear more in detail later.

Our attention has been called to *Crutchly vs. Mann*, 5 Taunton, R. 529. In this case the bill of exchange was made payable to the order of ——. The court found that under the facts shown the conclusion was irresistible that the name was filled in with the consent of the drawer. The same case was previously reported in 2 Maule & Selw. 90, where, as the case then stood, it appeared the bill of exchange had been sent out, the defendant leaving a blank for the name of the payee. One of the judges was of the opinion that the defendant, by leaving the blank, undertook to be answerable for it, when filled up in the shape of a bill of exchange; another judge was of the opinion that it was as though the defendant had made the bill payable to bearer; while the third judge was of the opinion that the issuing of the bill in blank without the name of the payee was an authority to a *bona fide* holder to insert the name.

In the case of *Harding vs. The State*, 54 Ind. 359, a promissory note was drawn leaving a blank space for the name of the payee, and it was held:

"So the name of the payee may be left blank, and this will authorize any *bona fide* holder to insert his own name."

In the case of *Brummel, et al. vs. Enders, et al.*, 18 Grat. 873, promissory notes, blank as to the names of the payees, had been put in the hands of an agent to be sold for the benefit of the makers. The agent sold them, at a greater discount than the legal rate of interest, to purchasers who did not know they were sold for the benefit of the makers. At the time of the sale the name of the purchasers was inserted, either by the purchasers or by the agent, in the blank left for the payee. When the notes were sued, the makers pleaded usury. The court, following the cases already cited, held that any *bona fide* holder of a bill or note which is blank as to the name of the payee may insert his own name, and thus acquire all the rights of the payee.

It will be observed that the case at bar differs from all of these cases. As before stated, not only did Mr. Gordon fail to insert the name of a payee, or to leave a blank where the name of the payee might be inserted, but he did more. He drew a line through the blank space, making it impossible for any one else to insert therein a name, indicating very clearly that he not only declined to name a payee, but intended to make it impossible for any one else to do so. Had Mr. Gordon issued a check otherwise perfect, but with the blank space for the amount of the check unfilled, and delivered it to a third person, it would be presumed the third person was given authority to fill the blank space. But had he, instead of leaving the space a blank, filled it by drawing a line through it, would any one say the third person might then insert a sum of money in that space? If not, upon what principle may the name of a payee be inserted when the space was filled in the same way, or upon what theory may it be presumed there was an impersonal payee when the maker has not made the check payable to cash, or some other impersonal payee. In order to construe the check as a complete instrument, we must read into it an intention not only not expressed by its language, but contrary to the act of the maker. The check, as it appears to-day, is without any payee. The record is silent in relation to whom it was delivered, or whether the person who presented it at the bank, or the person whose indorsement it bears, was a *bona fide* holder.

Judgment is affirmed.

Montgomery, J., did not sit. Hooker, C. J., concurred with Moore, J.

CARPENTER, J. (dissenting): I regret that I cannot concur in the opinion of my Brother Moore. I agree with him that the check in question is not governed by the authorities which hold that, where a blank is left for the insertion of the name of a payee, the instrument is to be treated as payable to bearer.

I cannot agree, however, that the case of *McIntosh vs. Lytle*, 26 Minn. 336, is controlling. That case resembles this in many particulars. There is, however, a difference, which, in my judgment, renders the reasoning of that case inapplicable. The fact that the plaintiff in the case at bar used the ordinary blank, and drew a line through the space intended for the name of the payee, prevents our assuming, as did the court there—and its decision was based on this assumption—that it is "the case of an inadvertent failure to complete the instrument intended by the parties."

The instrument under consideration is obviously complete, in just the

form the maker intended. In my judgment, the authorities which hold a check payable to the order of an impersonal payee to be valid and negotiable control this case.

I quote from the case of *Willets vs. The Phoenix Bank*, 2 Duer (N. Y.) at page 129: "One of the checks was payable to the order of 1658, the other three to the order of bills payable; and, as the required order could not in either case possibly be given, the checks, unless transferable by delivery, were payable to no one, and were void upon their face. The law is well-settled that a draft payable to the order of a fictitious person, inasmuch as a title cannot be given by an indorsement, is, in the judgment of law, payable to bearer. (*Vere vs. Lewis*, 3 Term R. 183; *Minet vs. Gibson*, Id. 481; *Gibson vs. Minet*, 1 H. Black, 569, affirmed in the House of Lords.) And it seems to us quite manifest that in principle these decisions embrace the present case. At any rate, the bank, by certifying the checks as good, is estopped from denying that they were valid as drafts upon the funds of the maker, and, consequently, were payable to bearer. The giving of such a certificate, if otherwise construed, would be a positive fraud."

In *Mechanics' Bank vs. Straiton*, 3 Abb. Dec. (N. Y.) 269, a check payable to bills payable or order was held payable to bearer, the Court saying: "By naming the persons to whose order the instrument is payable, the maker manifests his intention to limit its negotiability by imposing the condition of indorsement upon its first transfer. But no such condition is indicated by the designation of a fictitious or impersonal payee, for indorsement, under such circumstances, is manifestly impossible; and words of negotiability, when used in connection with such designations, are capable of no reasonable interpretation, except as expressive of an intention that the bill shall be negotiable without indorsement—*i. e.* in the same manner as if it had been made payable to bearer." We must decide that the check in the case at bar, like those in the cases cited, is either altogether void, or is transferable by delivery. I submit that we should follow those cases, and decide that it is transferable by delivery. To quote the language of Lord Ellenborough, in *Cruchley vs. Clarence*, 2 Maule & Selw. 90: "As the defendant has chosen to send the bill [check] into the world in this form, the world ought not to be deceived by his acts." This view of the case compels me to notice the fact that the check under consideration is not dated. According to the weight of authority, this omission does not invalidate it. (See *Zane on Banks and Banking*, sec. 152; *Daniel on Negotiable Instruments*, sec. 1577; *Norton on Bills and Notes*, p. 405, note.)

I think the judgment of the court below should be reversed, and a judgment entered in this court for the defendant.

Grant, J., concurred with Carpenter, J.

DEPOSIT OF TRUST FUNDS—WHEN CONSIDERED GENERAL AND NOT SPECIAL DEPOSITS.

Supreme Court of Iowa, May 15, 1903.

OFFICER vs. OFFICER, *et al.* (STEWART, INTERVENER).

In the absence of a statute forbidding such a course, an executor may deposit funds of the estate in a bank of good standing and reputed solvency.

In the absence of some special arrangement, such a deposit is deemed a general and not a special deposit.

This was an application in a receivership proceedings for the allowance and establishment of a claim filed by the intervener, as executor of the estate of A. Cochran, deceased, as a preferred claim. The trial court denied the application and intervener appealed.

DEEMER, J.: The firm of Officer & Pusey was a partnership doing a general banking business in the city of Council Bluffs. On September 17, 1900, it went into the hands of Receivers, and, on October 16 of the same year, intervener, as executor of the estate of A. Cochran, deceased, filed his claim against Officer & Pusey with the Receivers, for the sum of something more than \$2,000, which he had deposited in the bank to the credit of "the estate of A. Cochran, deceased. J. J. Stewart, executor."

He alleges that he notified the bank that this was a special trust fund which should at all times be kept on hand and subject to the order of court, and that said Officer & Pusey had notice of the character of the funds. He further pleaded that the funds in the hands of the Receivers were augmented to the amount of the deposit, and that the same, or an equal amount thereof, was still in their hands, and he asked that his claim be allowed and established as a preferred one.

The facts are not in dispute. It was agreed that the claim should be treated as if brought in the name of the *cestui que* trust; that J. J. Stewart was the executor of the estate of A. Cochran, and as such deposited the money claimed by him, as stated in his application; and that such deposits were made on and after March 31, 1900, with the knowledge of the bank that they were trust funds held by Stewart. The deposits were made in good faith, and, when made, the bank was reported to be solvent and sound. When the bank passed into the hands of the Receivers there was more than \$100,000 of assets, which was more than sufficient to pay all preferred claims; and from the time the deposits were made, down to the time of the appointment of the Receivers, the bank had more than \$100,000 in cash. Stewart never had an order of court to make the deposits, but acted upon his own judgment and responsibility, for the purpose of preserving and securing the funds. From time to time he drew checks in his official capacity against the funds, which were duly honored and paid.

The first question of law to be determined on this state of facts is, was the deposit wrongful? If so, and the bank had notice of the character of the funds, there is no doubt that the claim should be given a preference. (Ind. Dist. vs. King, 80 Iowa, 498; Davenport Plow Co. vs. Lamp, 80 Iowa, 722; Dist. Tp. vs. Bank, 88 Iowa, 194; *In re* Knapp & Co. 101 Iowa, 488; Jones vs. Chesebrough, 105 Iowa, 303.)

An executor must exercise that degree of care and prudence with reference to funds coming into his hands that ordinarily prudent men exercise in regard to their own affairs, and, in the absence of statute preventing, they may deposit the same in banks of good standing and reputed solvency. (Barney vs. Saunders, 16 How. 535; King vs. Talbot, 40 N. Y. 76.)

Indeed, it seems to be generally held that a trustee who has deposited funds to a trust account in a reputable bank or banking house is not liable for any loss which may occur through failure of the bank. (*In re* Law's Estate [Pa.] 22 Atl. 831, 14 L. R. A. 103; Norwood vs. Harness, 98 Ind. 134; Jacobus vs. Jacobus, 37 N. J. Eq. 17; People vs. Faulkner, 107 N. Y. 488.)

Of course the deposit must be made to the trust account. If the executor

or trustee makes a deposit of trust funds in his individual name, or mingles them with other funds, he is not relieved of responsibility should the funds be lost. (*Williams vs. Williams*, 55 Wis. 300; *Allen vs. Leach* [Del. Orph. Ct.] 29 Atl. 1050; *Corya vs. Corya*, 119 Ind. 593.) Such act is in itself a conversion of the funds. (*Ivey vs. Coleman*, 42 Ala. 409.)

Finding then that the executor was authorized to make a deposit of the money belonging to the estate, the next question is the nature of the deposit. Deposits are divided into general, special, and specific; and, in the absence of proof to the contrary, every deposit is presumed to be general. In case of general deposits, the money deposited is mingled with other money of the bank, and the entire amount forms a single fund, from which depositors are paid. The relation of debtor and creditor is created, and, in the event of failure of the bank, all such creditors stand on an equality. (*Lowry vs. Polk County*, 51 Iowa, 50; *Long vs. Emsley*, 57 Iowa, 11; *Commonwealth Bank vs. Wister*, 2 Pet. 318; *In re Hunt* [Mass.] 6 N. E. 554; *Brynn vs. Bank*, 9 Com. 413.)

A general deposit differs from a loan in that the money is left with the bank for safe keeping, subject to order, and payable, not in the specific money deposited, but in an equal sum. It may or may not bear interest, and, so long as the relation is simply that of debtor and creditor, no loan is created. (*In re Law's Estate*, *supra*.)

A special deposit is created where the money is left for safe keeping and return of the identical thing to the depositor. And a specific deposit exists when money or property is given to a bank for some specific and particular purpose, as a note for collection, money to pay, a particular note, or property for some specific purpose. (*People vs. Bank*, 96 N. Y. 33; *Brahm vs. Adkins*, 77 Ill. 263; *Peak vs. Ellicott*, 30 Kan. 156; *German Bank vs. Foreman*, 138 Pa. 474.)

The deposit made in this case was not a special one. The bank did not receive it upon a promise to keep the identical money and to return it to the executor. It was not specific, for the bank had the right to mix the funds with other money received by it, and obligated itself simply to honor and pay the executor's checks. It did not agree to hold the same for the parties entitled thereto, but it was at all times authorized to pay the same out on checks signed by the executor, and was not bound to see that the money received thereon went to those who were entitled to receive it. Many attempts have been made to secure priority in such cases on the theory that the deposit is specific, but they have uniformly failed. (See *Fletcher vs. Sharpe*, 108 Ind. 276, *McLain vs. Wallace*, 103 Ind. 562; *Alston vs. State*, 92 Ala. 124; *Henry vs. Martin*, 88 Wis. 367.)

We have found that the deposit in this case was authorized, and that it was general in character, and the question yet remains, may the executor or his *cestui que* trust recover the deposit as a preferred claim? The mere fact that he is a trust fund creditor does not give him this right. Equality is regarded as equity in such cases. He is simply a creditor of the bank, and has no peculiar claim or right over other creditors. (*Ringo vs. Field*, 6 Ark. 43; *Fletcher vs. Sharpe*, *supra*; *Shaw vs. Bauman*, 34 Ohio St. 25; *Paul vs. Draper*; [Mo.] 59 S. W. 77; *Nat'l Bank vs. Millard*, 10 Wall. 153.)

In *Fletcher vs. Sharpe*, *supra*, it is said: "There is no question that the fund was properly deposited. * * * When deposits are received, unless

they are special, they belong to the bank as a part of its general funds, and the relation of debtor and creditor arises between the bank and the depositor. This is equally so whether the deposit is of trust money or of funds which are impressed with no trust, provided the act of the depositor is no misappropriation of the funds. If, in receiving a trust fund, a bank acted with knowledge that it was taking the fund in violation of the duty of the trustee, the rights of a *cestui que* trust might be different. * * * In this case, where no impropriety is imputed to the bank in receiving the money, it becomes a debtor of the petitioner, and its debt to them was of the same character as its debt to any other depositor, and must be paid in the same proportion. The rights of other creditors stand on a level with those of the petitioners, and are to be guarded and protected by the court with the same vigilance."

This is manifestly sound doctrine, and does not in any manner controvert the rule that a *cestui que* trust may follow trust property which has been misapplied or misdirected by a trustee into the hands of any one who is not an innocent purchaser for value. Generally speaking, equity will follow a trust fund through any number of transmutations, and preserve and protect it for the real beneficiary, so long as such can be identified and followed; and no court has gone further than our own in this respect. But where the property has rightfully been disposed of by the trustee, and title has passed from him, *cestui que* trust will not be permitted to reclaim the same. Hence the necessity for determining the rightfulness of the deposit. When it is once determined that the deposit was rightful, the case assumes the same aspect as if the *cestui que* trust had expressly authorized it. Had he done so, of course he could not follow the property into the hands of the Receivers. In virtue of the power conferred upon him by law, the executor deposited the money in the bank, and thus became the bank's creditor for the amount of the deposit. The money was properly mingled with other funds of the bank, and lost its distinctive character as trust funds. The bank became obligated to return a like amount to the executor, or to the honor his checks issued against the deposit. In other words, it became the debtor of the trustee. And, as said in *Bradley vs. Chesebrough*, 111 Iowa, 126, referring to *Cavin vs. Gleason*, 105 N. Y. 262, "that plaintiff was a trust creditor does not of itself entitle him to preference over other creditors." The executor had the right to make the deposit, and the bank had an equal right to use it in its business in the ordinary way. The fund stood on the same footing as any other general deposit. (*McAfee vs. Bland* [Ky.] 11 S. W. 439.)

The case is easily distinguishable from cases where the deposit is wrongful, for there the relation of debtor and creditor does not exist; at any rate, the *cestui que* trust is not bound by such a deposit. It is also very different from those cases where a bank, with notice of the trust character of a deposit, attempts to apply it on a debt due it by the trustee. In such cases, the *cestui que* trust may recover the amount so misapplied from the bank. It is doubtless true, also, that the *cestui que* trust may recover from a solvent bank the amount of a deposit by another to his account as trustee, but none of these rules are applicable here, for the reasons that the deposit was rightful, the relation of debtor and creditor was created, and the entire assets of the bank are now in the hands of trustees for an equitable and proper distribution. There is no reason, then, for preferring one creditor over another,

and surely none will be preferred simply because he is what might be called a trust fund creditor.

CONSOLIDATION OF BANKS—USE OF COLLATERALS.

Supreme Court of Oklahoma, February 5, 1903.

OVERSTREET, *et al.* vs. CITIZENS' BANK.

Where a banking corporation borrows money from another bank for the purpose of paying its depositors, and hypothecates its notes and credits as collateral security for such loan, a suit in equity is not the proper proceeding by an unsecured creditor of such debtor bank to reach said collaterals in the hands of the creditor bank. The statute provides a plain, ample and adequate remedy in such cases.

A banking corporation desiring to quit business may transfer its depositors' accounts to another bank, and may borrow money from such other bank to pay its depositors, and may pledge its assets as security for the money so borrowed; and such action is not a consolidation or merger, nor does it release the first bank from liability, nor render the second liable to the other creditors of the first bank.

Where one creditor holds collateral security for payment of his claim, a release or return of a portion of the collaterals to the debtor, or permission to apply a portion of the proceeds of such collaterals to other *bona fide* debts of the debtor, is in neither case, if done in good faith, such a misuse of such collaterals as will render the holder liable to other creditors for the value of such collaterals.

(Syllabus by the court.)

This was a suit in equity by judgment creditors of a suspended banking corporation to recover judgment for the value of certain assets transferred by the suspended bank to another banking corporation.

The points decided are stated in the official syllabus given above.

BY WHAT LAW INDORSEMENT IS GOVERNED—DISCHARGE OF INDORSER BY IMPAIRING HIS REMEDY AGAINST MAKER.

Court of Appeals of New York, March 28, 1903.

AMELIA L. SPIES vs. NATIONAL CITY BANK.

In the case of every negotiable instrument there are as many separate contracts as there are indorsements, each being governed by the law of the place where made, unless it is the intention to negotiate the instrument elsewhere.

If the holder of a note so deals with the maker that the latter becomes discharged from all liability thereon, as against subsequent indorsers, then the indorsers cannot be required to pay the same.

The plaintiff's testator had procured the defendant to discount a note made by one R. M. Ong, of New Orleans, which the maker failed to pay at maturity, and which was duly protested. Afterwards the defendant brought suit against the maker in the courts of Louisiana, and obtained judgment against him. This judgment was then sold at a discount of fifty per cent. Afterwards the defendant sold certain bonds which had been deposited as collateral security with it by plaintiff's testator, and after paying certain other debts due from him to it, applied the balance, \$1,469.06, to the payment of his liability as indorser on the Ong note. The suit was brought to recover this amount.

PARKER, C. J.: While the note was a Louisiana contract, having been made in that State by a resident thereof, payable at a bank therein, the contract of indorsement was an independent contract governed by the law of the State where it was made and took effect, for in the case of every negotia-

ble instrument there are as many separate contracts as there are indorsements, each being governed by the law of the place where made, unless the intention is to negotiate the instrument elsewhere. (Story on Conflict of Laws, § 314; Daniel on Negotiable Instruments, §§ 867, 868, 899; *Aymar vs. Sheldon*, 12 Wend. 439; *Allen vs. Merchants' Bank*, 22 Wend. 215; *Cook vs. Litchfield*, 9 N. Y. 279, 290.) The note was made payable to the order of Marcial & Co., under which name the plaintiff's testator did business in the city of New York, and it was by him duly indorsed to the defendant, at its banking house in New York, before maturity. The contract of indorsement was, therefore, a New York contract, and the defendant having presented the note for payment when and where it was made payable, and, upon the refusal to pay, having caused the same to be duly protested for non-payment and notice thereof to be given to the plaintiff, it thereupon became entitled to enforce payment, and still retains that right unless it has done, or omitted to do, some act which, under the law of this State, has destroyed that right.

While the holder of a note may enforce collection from either the maker or indorser, or both, he must take care not to impair the remedy of the indorser against the maker, for to the extent that he destroys the indorser's claim against the maker, he releases his claim against the indorser. (*Shutts vs. Fingar*, 100 N. Y., 539; *Pitts vs. Congdon*, 2 N. Y. 352; *Brown vs. Williams*, 4 Wend. 360.)

In *Shutts'* case, it is said, in the course of a very full and careful discussion of the general subject, that an indorser who pays a note "is entitled to demand its possession from the creditor with the right of subrogation to all securities and remedies possessed by him against the prior parties thereon unimpaired by any act or laches of such creditor."

In *Pitts'* case it is held that "he" (the holder) "cannot discharge the party primarily liable and then sue the indorser, because the latter would in this way be deprived of his remedy over."

In *Brown's* case the court said, "if the holder releases the principal debtor, he ought not to recover against the indorser, for, by releasing the debt, he discharged the principal from all liability upon the note to the indorser as well as himself."

The principle established by these cases is that if the holder of a note so deals with the maker that he becomes discharged from all liability thereon as against subsequent indorsers, then the indorsers cannot be compelled to pay it.

BANK'S RIGHT OF SET-OFF—NOTE MATURING AFTER DEATH OF DEPOSITOR.

Court of Appeals of Kentucky, May 22, 1903. ' .

LITTLE'S ADMINISTRATOR vs. CITY NATIONAL BANK OF FULTON.

Where a bank holds the note of a deceased depositor, it may set off the amount of such note against the amount due to his estate from the bank on account of his deposit, even though the note does not mature until after his death.

HOBSON, J.: C. H. Little died a resident of Fulton county on April 1, 1900. At the time of his death he had on deposit in his own name in the Citizens' Savings Bank of Fulton, Ky., \$547.68; and the bank held a note against him for \$350, on which J. C. Bennett and William Brown were sureties, which matured on April 2, or the day after his death. The bank

paid to his administrator \$197.68, the balance of the deposit over and above the amount of the note, but declined to pay the remainder of the amount; insisting upon its right to offset the note against it. The administrator then filed this suit against the bank, and, the court having dismissed the action, he appeals.

The right of a bank to apply a deposit to the extinguishment of the depositor's indebtedness grows out of the doctrine that the relationship between the bank and the depositor is that of debtor and creditor. "The bank holds a lien upon the deposits in its hands to secure the repayment of the depositor's indebtedness, and may enforce that lien as the debts mature by applying the debtor's deposits upon them, thus setting the two off against each other." (3 Am. and Eng. Ency. of Law, 835.)

In *Masonic Savings Bank vs. Bangs' Adm'r*, 8 Ky. Law Rep. 16, this court said that the right of a bank to this lien is recognized by all the elementary books on the subject, and by an unbroken line of American decisions.

In *Kentucky Flour Company's Assignee vs. Merchants' National Bank*, 90 Ky. 225, an insolvent debtor, who was indebted to the bank with which he had money on deposit, made an assignment before the debt of the bank had matured. It was held that the bank, although its debt had not matured, might offset its debt against the deposit, as being between it and the assignee. The case here is much stronger in behalf of the bank, for its debt had matured before there was administration on the estate of the decedent, or any demand made of it for the deposit; and when the suit was brought it had an existing demand, which it could plead as a set-off.

In *Ford's Adm'r vs. Thornton*, 3 Leigh, 695, a debtor died before the note fell due. His estate proved to be insolvent. The bank at the time of his death had money of his on deposit, and it was held that the bank was entitled to apply the deposit to the payment of the note.

In *Knecht vs. United States Savings Institute*, 2 Mo. App. 563, a bank held a note against a depositor, who died insolvent before the note matured. The note was for more than the amount of the deposit. A balance was struck between the two demands, and the bank was allowed to prove up the remainder of its claim against the estate.

In *Mathewson vs. Strafford Bank*, 45 N. H. 108, on substantially the same facts, the executor sued to recover the testator's deposit; and the bank was allowed to set off its note against the testator, although it had not matured at his death, and the estate was insolvent.

So in *Camden National Bank vs. Green*, 45 N. J. Eq. 546, the testator having died, leaving a balance to his credit in the bank, which he willed to his wife, and she having had it transferred to her own account, the estate proving insolvent, and the note held by the bank against the testator having matured, the bank was held entitled to set off the deposit against the note; no rights of third persons having intervened. To the same effect, see 1 *Morse on Banking*, § 329, and cases cited (last edition). A contrary rule is laid down in Pennsylvania where the estate is insolvent, but where the estate is solvent the same rule is followed, as above indicated. (*Bosler's Adm'r vs. Exchange Bank*, 4 Pa. 32.)

But this ruling is in conflict with the current of authority and the principles established in this State. With us insolvency is a well-settled ground for equitable set-off, and where a decedent owes a debt, and has a claim com-

ing to him from the same person, the rule is that the claims will be offset, although the estate is insolvent, on the ground that only the balance is really due from one party to the other. (Newman on Pleadings, 595-598 ; Ely vs. Com. 35 Ky. 398.) The rule, also, is that if a bank, after the note matures, suffers the debtor to check out his deposit, and he then becomes insolvent, the surety in the note will be discharged. (Pursifull vs. Pineville Banking Co., 97 Ky. 154.)

Judgment affirmed.

**LOST NOTE—WHEN MAKER NOT DISCHARGED BY PAYMENT—
INDORSEMENT AS NOTICE.**

Supreme Court of Michigan, May 29, 1903.

PAGE WOVEN WIRE FENCE CO. vs. POOL.

Where notice that a note has been lost is brought home to the maker, payment thereafter will not extinguish liability, unless the person presenting the instrument is required before payment to establish title thereto.

While the indorsement "pay to the order of any bank or banker for collection," is a circumstance tending to show want of care in making payment to some person not answering such description, it is not conclusive, for notwithstanding such indorsement the payee would have the right to demand and receive payment.

This was an action to recover of the maker of a promissory note. The defendant produced the note upon the trial and claimed that she had paid the amount thereof to a person who had presented the same for payment. The plaintiff claimed to have given the defendant notice that the note had been lost.

MONTGOMERY, J. (omitting part of the opinion) : It is stated in the text books as elementary law that where notice that an instrument has been lost or stolen has been brought home to the maker, payment thereafter made will not extinguish liability, unless the party presenting the instrument is required, before payment, to establish title thereto. (Daniel on Negotiable Instruments, Sec. 1461 ; Byles on Bills and Notes, Sec. 378 ; Parsons on Bills and Notes, p. 256. See, also, Hinckley vs. Railroad Company, 129 Mass. 52, 37 Am. Rep. 297, which is a very instructive case, and the whole subject is discussed ; Bainbridge vs. City of Louisville, 83 Ky. 285, 4 Am. St. Rep. 153.) We are unable to see any good reason for denying the equity of this rule.

Where one of the two innocent parties must suffer, the law casts the burden upon him who is guilty of a want of diligence or care. And in case of a lost instrument it is difficult to see what more the owner of the bill may do than to bring home notice to the maker of the fact of such loss, thus bringing to his knowledge that the instrument is likely to be presented by one not entitled to receive payment thereon. If, with such information, no duty of care is cast upon the maker, and nothing short of absolute *mala fides* will invalidate a payment made, the law affords little protection to the payee ; and most emphatically is this so if, when knowledge of the loss is brought home to the maker, the bare possession of the note is sufficient to render recovery impossible, for such is the effect of declaring that actual *mala fides* must be shown. In the present case it is true that no notice was received by the maker of the loss of his instrument, prior to the payment, direct from the payee of the note, but she had this notice.

Notice was sent her of the fact that the note had been mailed to the bank, and that the Cashier of the bank had informed her that the note had not been received at the bank, and that it probably was lost in transit; and when the note was presented to her for payment it had the indorsement on the back, "Pay to the order of any bank or banker for collection and remittance to Page Woven Wire Fence Company."

Was this sufficient notice that the note had been lost? We think it was. The defendant had notice of every fact which, if true, showed the loss, to wit, the mailing of the note to the bank, the failure of the bank to receive it, and, furthermore, the statement of the Cashier of the bank to her that he thought the note was lost, and a request by him for payment without the production of the note.

The defendant, therefore, occupies the position of one paying a note to one not authorized to receive it, having notice of its loss, and, so far as the record discloses, without any inquiry or investigation as to the title of the holder.

It is claimed that the indorsement of the note to a bank for collection was a restrictive indorsement, and that for this reason the defendant was not justified in making payment to this alleged agent of the plaintiff. We do not accept this view of the plaintiff. While the indorsement was a circumstance showing want of care on the part of the defendant, it is by no means conclusive, for it cannot be doubted that the payee of the note, notwithstanding that it bore the indorsement in question, would have the right to demand and receive payment. The record fails to disclose what care the defendant exercised in making payment to the holder, and, upon this record, we think it was error to instruct a verdict for the defendant.

Judgment will be reversed, and a new trial ordered.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B.; Barrister, Toronto.]

BANKS AND BANKING—CHECK—LIFE INSURANCE—FRAUD OF AGENT—PAYMENT BY BANK—RIGHT OF COMPANY TO RECOVER AMOUNTS PAID.

THE LONDON LIFE INSURANCE CO. vs. THE MOLSONS BANK (5 Ontario Law Reports, p. 407).

The facts of this case sufficiently appear in the following judgment of Chief Justice Meredith.

JUDGMENT: The plaintiffs sue to recover from the defendants, who were their bankers, moneys which were paid, as the plaintiffs allege, without their authority, and improperly charged to their account, having been made upon checks drawn by the plaintiffs on the defendants, payable to various persons or their order, the indorsements of which by those persons were, as the plaintiffs allege, not genuine, but forged. The defendants resist the plaintiffs' claim on two grounds: (1) that in the circumstances under which they were issued all the checks were payable to fictitious or non-existent persons within the meaning of sub-section 3 of section 7 of the Bills of Exchange Act of 1890, and were therefore payable to bearer; (2) that if they are to be treated as payable to the order of real payees, the defendants were justified under all

the circumstances in paying them and debiting them to the plaintiffs' account.

I will deal first with the second of these contentions, for if it is made out, it will be unnecessary to consider the first.

There is no doubt upon the evidence that the proceeds of all the checks came into the hands of a man named Niblock, who was the assistant superintendent of the plaintiff company, having his office at Ottawa, and were appropriated by him to his own use by means of a system of fraud and forgery on his part.

The checks were issued for the purpose of paying supposed claims of the several persons in whose favor they were drawn, under policies of insurance made by the plaintiffs, and in the belief by the plaintiffs that the persons upon whose lives the policies had been granted had died; but in fact none of them had died, and there was no real claim by any of the beneficiaries against the plaintiffs. In all of the cases, except five (those of Burns, McKendry, Coghill, Miller and Little) the applications on which the policies were issued were entirely fictitious, the names of the supposed applicants, and of the supposed signers of the documents which accompanied them, being forged. In all of the cases the signatures to the proofs of loss were also forged, as were the indorsements purporting to be those of the payees of the checks. In the five cases of the genuine applications the policies had lapsed before the dates when the lives were said to have dropped and the claims were made.

The claim papers were in all the cases forwarded by Niblock from Ottawa to the head office of the plaintiffs at London, and show on their face that they were in part at least prepared by him.

With the exception of two (each for \$1,000) all the insurances were in the industrial branch, and for small sums. Niblock was appointed assistant superintendent on August 23, 1892, and the earliest of these fraudulent claims was received at the head office of the plaintiff company on the 25th of February, 1896. He had under his agreement with his employers, which is in writing, somewhat extensive powers; but nothing is said in it as to any connection he should have with the settlement and payment of claims under policies issued in respect of the insurance effected through his office. It was, however, the practice whenever a claim was sent in from his office, after it had been passed, to send him a check for the amount of it, payable to the claimant or supposed claimant, or his order. It was his duty to deliver the check to the person in whose favor it was drawn, and to obtain from him a discharge of the claim under the policy in settlement of which it was given. According to the evidence of the plaintiffs' accountant, Niblock sometimes paid a claim in money, and in such a case returned the check for it to the plaintiffs. It was the practice of the plaintiffs not to notify the claimants that the check had been sent in the case of an insurance in the industrial branch, but to do so where the insurance was not in the branch. Whether or not notices had been sent to the supposed claimants in the two cases of insurance of the latter character, was not shown, but it is probable from the testimony given at the trial that notice was not sent in those cases.

Each of the checks is indorsed with the name of the payee of it; all of them except two (McKendry's and Hale's) are also indorsed by Niblock—his

name following that of the payee ; of the checks thus indorsed three have above the name of Niblock, the word "witness."

It was not shown to whom or how the moneys which were paid on the checks were paid. All of the supposed claimants lived or were represented to live at or in the vicinity of Ottawa, and the checks were all payable at any branch bank of the defendants, and were paid through their Ottawa branch.

The proper conclusion upon the testimony is, I think, that all the checks were paid by the defendants in good faith and upon the representation of Niblock, acting for the plaintiffs, that the persons to whom payment was made were the persons named in the checks as payees of them. No distinction in this respect ought to be made, as I think, between the checks upon which Niblock's name was indorsed and the two upon which it does not appear. With regard to the former, there is the representation in writing by Niblock that the name indorsed as that of the payee is the genuine signature of the payee, for that I take to be the effect of his indorsement ; and as to the latter, though there is not the same kind of representation, there was, I think, equally a representation to the same effect, for the proper inference is as to those that Niblock wrote the name of the payee, intending that the defendants should accept and act upon them as their genuine signatures.

What was done as to these two checks was the same, I think, as if Niblock in each case had gone to the defendants' bank with some one whom he represented to be the payee, and had, upon that representation, induced the officers of the bank to pay the checks as bearing the genuine indorsements of the real payees.

Assuming this view to be correct, are the plaintiffs affected by what is done by Niblock, so as to preclude them from disputing the right of the defendants to pay the checks and charge the amount paid to the plaintiffs' account ? In my opinion they are. Niblock was the representative of the plaintiffs at Ottawa, having the sole conduct and supervision at that point of all the business done through his office. The checks were sent to him in order that delivery of them to the person for whom they were intended might be secured, and that proper discharges might be obtained from them of the company's liability on the policies in respect of which they were issued. The plaintiffs knew, or ought to have known, that their bankers would in all probability require the persons presenting the checks for payment to be identified as the persons named as the payees of them, and that Niblock was the most likely, or at least a likely person to be called upon to do that, and as to most of the checks they had notice that Niblock was in fact certifying to the bankers the genuineness of the indorsements. It was not shown that the practice of Niblock so certifying was exceptional in these particular cases ; and the fair inference is, I think, that he did this throughout the period of his agency which, as I have said, began in the year 1892 ; but if that inference ought not to be drawn from the testimony given at the trial, I would give leave to the defendants to show what the fact is in that regard.

It would, as it seems to me, be a startling thing, at all events to business men, if it were to be held that a banker paying the checks of his customer under circumstances such as existed in this case should be bound to suffer the loss occasioned by the fraud committed by the person whom the customer had entrusted with the powers and duties which were entrusted to Niblock.

I am not, I think, required to so decide, but am warranted in holding that the loss must fall, where, in my opinion, in justice it ought to fall—upon the plaintiffs.

Having reached this conclusion, it is unnecessary to consider the otherwise important and also very difficult question raised, as to the payees of the checks being fictitious or non-existent persons within the meaning of subsection 3 of section 7 of the Bills of Exchange Act, 1890.

The action is dismissed, with costs.

PROMISSORY NOTE—STATUTE OF LIMITATIONS—ACKNOWLEDGMENT OF DEBT—SPECIAL PROMISE TO PAY.

LANGRISH vs. WATTS (1903, One King's Bench Division p. 639).

Where, in an action commenced in 1902 upon a promissory note given by the defendant to the plaintiff in 1881, payable on demand, it was proved that the defendant had in 1901 written a letter, in which, after asserting that there had been certain payments by him on account of the note, he used expressions importing that he was willing that an account should be taken between himself and the plaintiff, and that he would pay what was thereupon found to be due, and it was found on the trial that no payments had been made on account of the note.

Held, affirming the judgment of Bruce, J., that the letter afforded sufficient evidence of a new promise to take the case out of the statute of limitations.

STATEMENT OF FACTS: This was an appeal against the Judgment of Bruce, J., in an action tried by him without a jury.

The action which was commenced in April, 1902, was on a promissory note given by the defendant to the plaintiff on December 9, 1881, payable on demand. The defendant pleaded payment as to a portion of the money claimed, and also that the note was outlawed under the statute of limitations. The trial judge found that there was not sufficient evidence of any payments by the defendant on account of the note. That finding was not questioned on the appeal, and the only other question was whether the letters written by the defendant amounted to a sufficient acknowledgment of the debt, or fresh special promise to pay the amount, to take the case out of the statute of limitations.

Between June 27, 1901, and November 23, 1901, the defendant wrote several letters, and the plaintiff held that these letters were an answer to the plea that the note was outlawed inasmuch as they amounted to a special promise in writing to pay what was found due on the note.

The defendant was entitled to certain moneys out of an estate of a deceased relative. In a letter of July 10, he claimed to have made certain payments on account and proceeded: "How is it Uncle did not credit me with it, I cannot think; but if he hunts up his old bank books he will be able to trace up the amounts, and I feel sure he will be satisfied that I am correct. Just at present I cannot lay my hand upon my bank book of that date or would be more positive on the subject. At present I have no money on hand but as soon as there is another division I will send Uncle some."

It was admitted that after the date of this letter and before this action was commenced there had been another division of the moneys of the estate in which the defendant was interested.

Bruce, J., was of the opinion that the letters did not amount to an acknowledgment that the face amount of the note was due, but he held that they

amounted to a conditional promise to pay what upon an account being taken might be found to be due from the defendant to the plaintiff; and that, the condition having been fulfilled, the plaintiff was entitled to recover upon that promise notwithstanding the statute of limitations.

JUDGMENT (VAUGHAN, WILLIAMS, STIRLING and MATHEW, *L. JJ.*): We entirely agree with the decision of Bruce, J., that there was not upon the correspondence in this case any acknowledgment of such a nature as to give rise in law to an implied promise by the defendant to pay the full amount of the original debt. We have been referred on that point to the case of Buckmaster vs. Russell (10 C. B. N. S. p. 745), which in my judgment was rightly decided. Two points were decided in that case: One was that there was not in that case any sufficient acknowledgment of the debt; and the other was that, where there is a fresh promise which is conditional, the plaintiff can only sue on that promise, if the condition was fulfilled, and, even where that is the case the plaintiff cannot recover anything on the fresh promise beyond that which the promise itself imports.

As regards the question of special promise, the court held that, as the debtor's offer to pay by installments, which was made subject to the creditor's approbation of it, was not accepted, and did not meet with the approbation of the creditors, the action could not be maintained on the footing of there being such a promise; and, that being so, the only other question was whether there was sufficient acknowledgment of the debt as distinguished from a fresh special promise. With regard to that question, there was not in that case any absolute denial by the defendant that the sum claimed was due, or that any sum was due. He said in his letter that he had no wish to deny any just debt, but he could not get rid of the notion that the account was settled in 1851. It was held that the letter did not amount to a sufficient acknowledgment to take the case out of the statute. Similarly, in the present case, as regards the question whether the correspondence constitutes an acknowledgment of the debt, I agree with Bruce, J., that, without straining the language, it is impossible to find in the letters any acknowledgment of indebtedness to the full face amount of the note.

But the learned Judge proceeded to deal with the case from another point of view. He was of opinion that the effect of the correspondence was that there was an invitation by the defendant to the plaintiff to have the account gone into between them, and a promise by the defendant to pay what, on that being done, might prove to be the amount due from him. That is an invitation which a man may give, and a promise which he may make, although he may previously in the correspondence have denied his indebtedness to the amount claimed, and have suggested that certain specific payments have been made by him on account of the original debt. The effect of the correspondence as a whole may, notwithstanding those statements, be that he makes a fresh promise, if an account be taken, to pay what is found to be due from him on that account. This case appears to me to be on the border line, but I am not prepared to say that the construction so put by Bruce, J., upon the defendant's letters was wrong. The cases of *Prance vs. Sympton*, *Sidwell vs. Mason and Skeet vs. Lindsay* are ample authority to show that such a promise, that is to say, a promise to pay the balance which may be ascertained to be due in respect of the original debt upon an account being taken, is a sufficient promise to take a case out of the statute of limi-

tations. Looking at the common law cases on the subject, apart from any question of a claim in equity to an account, they appear to show that, where a defendant in effect has said that he does not think that he owes so much as is claimed, but, if vouchers are furnished, he will pay whatever is due, that is an acknowledgment of a debt subject to the business operation of ascertaining the amount being gone through. That operation was in this case gone through at the trial, and Bruce, J., arrived at the conclusion that the full amount of the note and interest was still due. Under these circumstances I think the appeal must be dismissed.

COLLATERAL NOTES—APPLYING PROCEEDS TO PAYMENT OF PRINCIPAL NOTE.

Editor Bankers' Magazine:

BOTTINEAU, N. D., June 24, 1903.

SIR: Will you kindly inform me what you hold to be the law in the matter of applying proceeds of collateral notes to the payment of the principal note. Is it optional with the bank, in the absence of any express agreement, whether it applies the proceeds of collateral paper at the time of its collection, or can it hold such proceeds until maturity or after maturity until there is a sufficient amount collected to pay the principal note with interest in full. For instance, our bank takes a principal note of \$1,000 from A, and there are sundry notes, aggregating \$1,500, deposited as collateral thereto. Several of the collateral notes are collected prior to the maturity of the principal note, but not enough to pay the principal note in full at maturity, and the maker makes no payment thereon at maturity or at any other time. Is our bank required to apply these collections on the principal note; (1) at the time they are severally received, or (2) at the maturity of the principal note, or (3) can it hold the proceeds of the collateral until there is sufficient collected to take up the principal note with interest? In other words, is a bank required to accept partial payments in the absence of an agreement therefor? Also, do you hold that we can charge the customary collection charges on the collateral paper the same as on other paper left with the bank for collection.

F. W. CATHRO.

Answer.—The bank is not bound, nor has it the right, to apply the proceeds of collaterals to the payment of the note which they are intended to secure until such note has matured; for until then nothing is due on such note. After maturity, the bank has the option to apply the proceeds of the collaterals, as they are collected, or it may defer such application until the amount of such collections is sufficient to pay the note in full. We see no reason why the bank may not make the usual collection charge on paper deposited as collateral.

PROTEST OF CHECKS BY BANK OFFICER.

Editor Bankers' Magazine:

LAKE CITY, ARK., May 27, 1903.

SIR: Can the Cashier of a bank, who is a notary public, protest check drawn on his bank? Can he protest drafts and notes sent to his bank for collection and remittance, on which payment is refused?

CASHIER.

Answer.—It has been held that a notary who is an officer of a bank may legally protest paper belonging to the bank (*Nelson vs. First Nat. Bank*, 69 Fed. Rep. 798; 29 U. S. App. 554), and this even though he is a stockholder in the bank (*Moreland's Assignee vs. Citizens' Savings Bank [Ky.]*), 30 S. W. Rep. 19). And it has further been held that a Cashier who is a notary may protest his own note, which has been discounted by the bank (*Dykman vs. Northridge*, 1 App. Div. [N. Y.] 26). We see no reason, therefore, why he may not protest a check drawn on his bank.

*THE PRACTICAL WORK OF A BANK.

INCREASING THE NET EARNINGS.

IV.

I.—PRUDENT AND ECONOMICAL MANAGEMENT.

Banking has experienced in the last forty or fifty years development and progress equal at least to that of any other line of business, and though the private banker is still considerably in evidence, the bulk of his important transactions has devolved on chartered banks, existing with varying restrictions and privileges under State and national laws. The tendency to incorporate is constantly spreading so that not only cities of importance, but equally so towns bordering on the wilderness, have chartered banks, affording the facilities which are so necessary to the proper administration of industry.

But with this same tendency of appealing to the confidence of the public by inviting supervision by authorities existing for that purpose, come features that ordinarily are overlooked, but in substance are the very staff of life of chartered banks.

The private banker was responsible at most to a partner for the proper care of funds invested. A dollar expended was virtually a dollar out of his own purse, a dollar gained was his and at his disposal. But the million-dollar capital bank of to-day makes gains and losses not for one or two individuals, but for a vast number of investors who look to it for returns, most of whom probably would be entire strangers to the institution if their names were not on record as stockholders. Their interests are looked after by a fractional portion of their body, the officials of the bank, and while the law enables a general supervision over these, they in person bear the responsibility for progress or loss of prestige.

Bank managers should not overlook these conditions. Because a loss will affect them indirectly only, namely in proportion to the amount of shares held by them personally, which may be very small, it must nevertheless be avoided as if it were to be theirs individually. Likewise there must be no hesitation in taking advantage of every opportunity for furthering the welfare of the bank, though it may mean annoyance and interference with private affairs. If in such contingencies the President or Cashier were absolute owner of the institution he is serving, he would not pause but would at once do that which promised profit. Because he acts in merely a representative capacity and the prospective gain would perhaps mean but little to him, he should not avoid what is his plain duty.

The proper economical administration of a bank, then, depends principally upon the idea the management has of its responsibilities. Every dollar must be earned before it is spent, and the aim should be, of course, to keep the receipts as far in advance of the disbursements as possible. In every bank, large or small, the manager can do this to better advantage and can keep stricter supervision over the funds as they come and go by not shirking a little bookkeeping. As a matter of course, the general balance book, the dividend, the expense and profit and loss accounts,

* A series of articles to be published in competition for prizes aggregating \$1,000, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

will always be open to him. Be they, however, condensed as much as possible, they cannot be as instructive as a simple little form which can be kept handy and will show at a glance whence the money comes and where it goes, and what relation toward one another the different items assume.

FORM 1.

These figures accurately reflect existing conditions, and transactions must be carried out according to their tenor. If, however, it is a question of granting loans, extending a privilege or incurring expense, no decision should bear the taint of avarice, for the difference between conservatism and closeness is a great one.

Among the various items of expenditure the salary list is an important one. Labor-saving devices have made but few inroads in bank work. The efforts of brains cannot be produced by machinery, the reason of their high level in industry. And this again is a reason why they should not be underrated, but rewarded according to their merit. A good man in his position is never overpaid and it would be but crippling the service to begrudge him the just due of his ability, which most certainly will only then be exercised to its full extent when properly appreciated.

The clerical force, from the lowest to the highest position in the bank, should be selected with an eye toward securing the best possible service under all circumstances. As the volume of work constantly fluctuates, so must the employees be able to master it at all times, and not only master it, but master it well, even when the stress of business is most severe. Useless clerks can easily be avoided by a proper division of the work, and the manager can facilitate his work of superintending by keeping a record of the general deportment of those under him. This need not call for a system of espionage, in fact should not, but a memorandum now and then may frequently ease the so often perplexing task of making promotions. At times it will pay a bank to pension an employee and engage a more efficient man instead rather than retain worn material and poor service. Such cases are merely drawbacks to the *esprit de corps* and ought to be eliminated.

Stationery is also an item of considerable expense. While it should be well adapted to the needs of the institution and always appropriate and attractive in appearance, it must not be a cause of useless waste of money. It is a good plan to keep a regular stationery stock-book showing date of each order, quantity, price

and by whom furnished. Among the advantages of this is the record showing how long a certain supply lasted and in this way particularly unnecessary leakage in the expense account can more easily be stopped.

Repair Tickets

<i>May 1/01</i>	<i>"</i>	<i>150 m</i>	<i>70 -</i>

FORM 2.

The necessity of neatness applies not only to the stationery, but to the counting-rooms and everything connected with them as well. Rather sacrifice a few dollars than the good opinion of your dealers and the public.

II.—PREVENTING USELESS EXPENDITURE OF TIME AND MONEY.

A good system generally, with the proper apportionment of work, will do a great deal in this direction. As the saying has it, "time is money." So will time lost be measured in dollars and dollars lost be measured by the time required to earn them. Heads of departments must be taught to avoid all unprofitable transactions and should make it a point to enquire into the nature of matters that come under their observation. No doubt many things are daily done in banks that represent a direct loss, repeated over and over simply because the propriety of investigation has occurred to no one. Such drains on the earnings can be stopped by the use of a little judgment.

Take the case of that class of customers who do a straggling infinitesimal business. While every little counts, this holds true only of that small account whose balance retains a regular character and which does not require services that would be justifiable for business done on a large scale. The collection of notes, probably universally done without charge, should not exceed in bulk what the size of the account would warrant. Fortunately enough, clearing-house rules have been formulated in a great many cities, providing for charges on out-of-town collections. This does away with what at one time was a source of considerable loss to the banks.

Customers who make it a point to overdraw should be expelled at an early stage of their filibustering operations. In short, wherever leakage of time or money exists (and, as mentioned, it may require search to establish the fact), stop it at once. An hour here and a dollar there sum up a considerable amount in course of time—and every little counts.

Advertising and subscriptions of various kinds also may be considered under this heading; neither of the two should be overdone. It is policy, though, these days,

to keep before the public at all times, and judicious advertising is indispensable to success. Where and when to use this costly medium with some assurance of returns is a question often quite perplexing. Here, too, money is frequently squandered.

Banks are "easy marks" not only for the assessor, but also for the suave gentleman and irresistible lady with the subscription list. While deserving charity ought not to be overlooked, impudent solicitation should be promptly suppressed.

In the foregoing is found what bears indirectly only on the earnings of a bank, and next to consider are the important items that reflect directly on the profit and loss account. Interest and exchange here occupy foremost places. Adjusting these to the market rates and constantly watching the possibilities of gaining advantages, are probably the first duties of the President or Cashier. Banks usually carry a considerable line of call loans, made at varying rates. These should of necessity be the first to respond to whatever pressure may be brought to bear on the money market. Time paper will not be influenced so quickly, but under particular stress ought to carry its share of the burden. The problem of paying interest, and what rate, on time deposits is a vexatious one, and unfortunately competition creates the condition that for fear of losing business most banks retain the usual high rate, even when at a loss for investments. Perhaps the correct solution would be a clearing-house regulation akin to that governing collection charges.

To keep the reserve in such shape that every available dollar is active, although it be only in earning two per cent. in an out-of-town balance; to note the rate of earning on the loans and the cost of deposits (easily too high); in case of a National bank to watch the circulation; finally, to comprehend fully the relation between all this in its entirety, are matters that keep the bank manager of to-day constantly on the alert for fresh developments. Throughout let him remember that time is money, and *vice versa*.

III.—INCREASING THE BANK'S CUSTOMERS.

Securing and retaining a desirable class of customers is the banker's natural ambition. The task is never an easy one, requiring a way of meeting a varied lot of individuals each on his own plane. Tact, courtesy, a temper always under control, quick judgment—are here essential. In the effort of increasing the bank's customers those already on the books must not be neglected. It is always better policy to devote time to looking after their wants and possible complaints, rather than spend it in different ways. The good-will of established connections should primarily be courted. This granted, each of these will at the opportune moment return favors and much good results when this relation of friendship is once a matter of fact. Not to be overlooked is the chance employees may find for increasing the bank's business, provided a sufficient interest is taken in current affairs.

Various publications, daily, weekly and monthly, should be scanned for the many announcements they always contain. New corporations, election of directors, change in officers and cases in trusteeship and the like may bring out the name of an acquaintance close enough to turn some deal in the desired direction.

Banks should be represented in the most prominent business and social organizations of their locality. Whenever feasible, the officers should seek to form new acquaintances, at home as well as abroad, and the up-to-date institution will see that it is in evidence at important conventions, etc. A certain influential standing in the community is not only desirable, but quite necessary, a fact generally verified in the popular conception of a banker.

As a rule the board of directors will portray the general character of the establishment, hence to make progress, progressive men should be called upon to serve. Their private interests should be identified with that of the bank and a willingness to make occasional sacrifices be evident. The number of directors is of importance,

inasmuch as a larger field can be covered with a larger number, and it is a matter of course that each will use his best efforts to gather up all possible business in his sphere for the benefit of the bank. This ought to hold true of stockholders as well, though naturally those of a speculative turn of mind cannot be expected to do much in that direction.

IV.—WAYS IN WHICH BUSINESS MAY BE PROFITABLY EXTENDED.

When considering a new proposition, it is well first of all to judge whether profit or loss is apt to ensue. Latter-day keenness in competition often induces banks to accept business that not only is unprofitable, but decidedly detrimental. In just such questions the acute manager will assert himself; it is here that sound judgment will be brought into play. Financing schemes of various kinds may pay, but care must be taken not to tie up funds where in case of a sudden call they would be inaccessible. Tiding merchants and corporations over temporary difficulties is a task frequently thrust upon banks, occasionally perhaps voluntarily assumed; if properly approached, the result will usually produce mutual benefit and profit. However, this is a tortuous channel to navigate and the steering here should invariably be done by the bank.

United States, State and municipal deposits to many institutions are desirable prizes, and a portion of the profit therefrom is found in the confidence the possession of such creates in the mind of the public. But they should never be accepted for this reason alone, the problem of dollars and per cent. being the superior one. Bids for business of this kind usually are the outgrowth of certain policies on the part of the directors, ordinarily governed by individual features characteristic of the bank.

Extensive safe-deposit arrangements are comparatively new with the majority of banks, but where they can be established without fear of too much competition, their introduction is undoubtedly a wise step. As it calls for a considerable investment, however, calculations must show plainly that reasonable returns will be forthcoming. It must be remembered here as in every other department that banks operate for a profit above all other considerations, and to do things merely for personal gratification is beyond their sphere. The prime idea is to make both ends meet in such a way that they overlap each other—the more the better. MAX JUDGE.

Modern Banking Methods.

A NEW BOOK ON PRACTICAL BANKING AND BANK BOOKKEEPING.

The undersigned have just published a new work, entitled **MODERN BANKING METHODS**, by Mr. A. R. Barrett, an experienced banker and expert bank accountant and examiner.

This book describes in a plain and concise way all the various steps to be taken in organizing and operating banks, giving over 200 illustrations of books, records and forms used in conducting city and country banks in accordance with the most progressive methods. These various forms are filled up so as to represent actual transactions, thus clearly explaining their use.

MODERN BANKING METHODS will be found of great practical value to those organizing new banks and to all bankers who wish to simplify and improve their system of bank bookkeeping so as to assure the best results.

The different departments of the bank are treated of separately, and the books and forms used in each fully explained. Numerous practical suggestions are offered—the fruits of a long banking experience—for transacting the business of each department in a way to secure efficiency, speed and accuracy.

The price of **MODERN BANKING METHODS** is \$4 per copy.

THE BEGINNINGS OF THE BANK OF ENGLAND.

The Bank of England was born of two revolutions—one of them political, the other economic. After a century and a half of strife and dissension over questions of church and State, the nation had finally made up its mind to adopt that form of polity which was generally identified with Protestantism. James II., the last Stuart and Roman Catholic king, had fled beyond the sea, and the Calvinistic Prince of Orange, William III., was settling himself, though with some difficulty, on the uneasy English throne. Meanwhile, an economic revolution, less noticeable, perhaps, but not less important, was already displacing the crude industrial contrivances of an earlier age. England, at the close of the seventeenth century, found herself undeniably prosperous, and this in spite of a hundred years of political overturnings. For whatever faction might be uppermost, Papist or Protestant, round-head or cavalier, English trade had prospered. Alike under the dissolute Charles, the iron-handed Oliver, or the parsimonious James, Englishmen had made money, and the revenues of the kingdom had steadily increased. To meet these new conditions, the primitive machinery of finance as it then existed was found to be ludicrously inadequate.

The goldsmiths, for a time, were the principal bankers. With their conveniences for storing plate and jewels, they naturally soon began to receive gold and silver coin on deposit, and just as naturally drafts were drawn against these deposits and readily passed from hand to hand.

But even this primitive system had its opponents. The goldsmiths and their new-fangled ways of getting rich were regarded with an evil eye by royal cavaliers and tory squires, and the more conservative merchants still preferred to keep their sovereigns and shillings in their own strong boxes at home. Sir Dudley North, returning to England in 1680, was furious at the goldsmiths, who followed him around the Royal Exchange in their obsequious persistence to serve him. When asked where he kept his money, he replied in great heat, "Where should I keep it but in my own house!"

But other and greater shocks were in store for the old fogies who regarded as dangerous innovations the methods of these banker-goldsmiths. For while private traders could perhaps have made shift for a while longer, the position of the Government was every day becoming more intolerable. With the most imperfect machinery for conducting its fiscal operations, its revenues delayed or unavailable, the administration was in the position of a great proprietor, who owns everything in sight, and yet is compelled to borrow five pounds from his footman or ten shillings from his valet to meet the running expenses of his establishment.

The City of London was familiar with the spectacle of a procession of cabinet ministers walking up and down Cornhill or Cheapside, hat in hand, to borrow fifty thousand from this wealthy draper and a hundred thousand from that well-to-do ironmonger, in order to close up some sudden gap in the national exchequer. Nor, indeed, was this all, or even the worst. A great swarm of usurers and money-lenders had gathered about the court. Patriotic gentlemen these, who were always ready to come to their country's relief at rates varying from fifteen to fifty per cent. And when, as was frequently the case, the crown jewels or royal dinner service had to be placed in pawn, royalty found themselves compelled to pay about four times as much for their accommodations as did their own most loyal subjects.

Naturally enough, when the scheme of a national bank was proposed, money-lenders and goldsmiths joined with the Tories in predicting its speedy ruin and the ruin of the ungrateful country which refused to be helped at the rate of forty per cent. Upon the bill receiving the royal signature, the pawnbrokers and shylocks set up a howl of rage. Some proclaimed that the throne was in danger; for, they argued, banks and kings had never existed together. There were banks in the Republics of Venice, of Genoa and Amsterdam, but who ever heard of a Bank of France or a Bank of Spain.

Historically, at least, these obstructionists had the right of it, for banks, in principle, are republican institutions, representing, as they do, the wealth of the many rather than of the few, the common-wealth as opposed to the individual hoard. They are the expression, in concrete form, of the spirit of mutuality and confidence.

From the very outset did England's great bank prove a more stable foundation for England's finances than the good-will of her nobles or merchant princes.

But all this is much plainer to-day than it was in 1691, when William Paterson put forth his scheme for a national bank. Little is known of the early history of this strange man, excepting that he soon abandoned his youthful profession of the ministry and gave himself over to a life of wandering and adventure. He visited the West Indies and there became either a missionary or a pirate according as friend or enemy told the story. Visionary and enthusiast that he was, somewhere in his roving existence he had acquired a perfect knowledge of accounts, and his plan for a national bank, taken up and fathered by the foremost Whig politicians of the day, was carried to a successful conclusion, while Paterson himself appears only as a director the first year.

He is heard of again, four years after the establishment of the bank, heading the famous Darien expedition. With fourteen hundred infatuated followers, Paterson set sail for the American Isthmus with the idea of founding a new East India Company and an ideal community as well. The rainbow visions of the projectors were soon cruelly dispelled. Disease, the climate, the savages and the Spaniards rapidly thinned their ranks, and only a handful of hollow-cheeked, fever-stricken wretches returned to tell the tale of sufferings which have become historic.

Many who had profited by Paterson's schemes now found it convenient to ignore the broken adventurer who lay dying in poverty, but the Bank of England is Paterson's monument, although nowhere do we find his name inscribed upon it.

The new Government was in rather desperate straits. William, as the soul and brain of the great European coalition which was successfully opposing the pretensions of the "Grande Monarque" Louis XIV., was anxious to join his army in Holland. That army was suffering for many necessities, and for all the willingness of Parliament and people, and the laying of new taxes, the estimates for 1694 were still a million short. Any number of projects and projectors were astir. A lottery was proposed, and one Neale, a professional gambler about the court, was named as a fit person to superintend it. A scheme for a Land Bank was brought forward by which the wealth of all landowners was to be doubled, a ten-pound note or credit to be issued against every ten pounds' worth of real estate. This project was wondrously popular for a time; indeed, the Land Bank threatened to become a serious rival to the Bank of England, and subscription books were opened with a great flourish of trumpets. But, as is often the case, it soon developed that the most enthusiastic advocates of the Land Bank were those who had neither land to lose nor money to invest.

Then Paterson's half-forgotten project was thought of and taken up by Charles Montague, a powerful cabinet minister, seconded by Michael Godfrey, one of the most prominent merchants of London.

After much discussion and opposition, the plan took definite shape as follows:

The sum of £1,200,000 was to be advanced for the public service; the subscribers to this loan were to receive eight per cent. (a small rate for those days), £4,000, a year for expenses of management—in all £100,000—and were incorporated into a society denominated "The Governor and Company of the Bank of England."

The act of Parliament by which the "Tonnage Bank," as it was sarcastically called, was established, is entitled:

"An act for granting to their majesties (William and Mary) several duties upon the tonnage of ships and vessels, and upon beer, ale and other liquors for securing certain recompenses and advantages in the said act mentioned, to such persons as shall voluntarily advance the sum of £1,500,000 towards carrying on the war with France."

To prevent this loan from being absorbed by the money kings of that day, £10,000 was the limit of the first subscription for any one person, and not more than £20,000 altogether. In spite of the walls and howls of money-lenders and goldsmiths and the dismal prophecies of conservatives who, because people declined to keep their sovereigns and shillings in clumsy iron boxes and behind secret panels, the country, perforce, must be going to the dogs, the whole subscription to this most popular of loans was filled in ten days, and the charter for the bank to commence business was issued July 27, 1694.

The beginning of the Bank of England was the beginning of a new era in England's finances. There were no more humiliating pilgrimages to the city in order to beg a few thousands to keep the Government afloat. Loyal noblemen were no longer called upon to cut down their ancestral forests or throw their family plate into the melting-pot to fit out armies and fleets for a distressed king. The day when royalty was compelled to borrow money at pawnbroker's rates was done.

Like its great predecessors of Genoa, Venice and Amsterdam, the Bank of England was founded on a loan to the Government. Its first subscription was handed over to the Exchequer, and to-day all of its present capital of some £14,000,000 is invested in the same manner. Bound thus to the Government by the strongest of all ties, self-interest, the bank has also remained true to the political interests which brought it into being. As the Church of England has always been the natural conservator of tradition, and the chief exponent of the old cavalier and landed interests, so the Bank of England is the main bulwark of her great commercial and manufacturing interests.

Buttressed by church and bank, by treasures spiritual and treasures material, what wonder if Great Britain complacently sends her soldiers and her ships, her guns and her goods, to the four quarters of the globe, confident of winning every victory whether of war or peace.

JESSE C. JOY.

GROWTH OF THE SAVINGS BANKS.

The table presented below is taken from the annual report of the Comptroller of the Currency for 1902. It shows that the deposits in the Savings banks are equal to more than two-thirds of the individual deposits of the National banks of the United States. This is a remarkable showing for the Savings banks, particularly when it is remembered that \$2,800,000,000 of the Savings banks deposits out of a total of \$2,750,000,000 is found in the New England and Eastern States alone.

a Estimated.

b Partially estimated, 55 banks, with \$96,890,262 savings deposits, reports 299,038 depositors.

c Savings deposits in State institutions having savings departments; abstract of reports included with State banks.

Taking the latest figures as given above and comparing them with the statements of the National banks for November 25, 1902, the following is shown:

STATES.	National banks individual deposits.	Savings banks deposits.
Maine.....	\$24,828,703	\$72,082,694
New Hampshire.....	13,560,101	60,249,862
Vermont.....	12,427,008	41,987,497
Massachusetts.....	236,473,406	560,705,752
Rhode Island.....	19,919,863	71,900,541
Connecticut.....	43,211,758	193,248,909
New York.....	720,970,477	1,051,689,186
New Jersey.....	87,352,682	69,866,709
Pennsylvania.....	445,709,755	120,441,275
Delaware.....	7,382,878	1,265,586
Maryland.....	51,182,897	64,367,767
District of Columbia.....	21,036,515	1,309,555
Total.....	\$1,684,056,043	\$2,808,115,833

In all the New England States, and also in New York and Maryland, the deposits in the Savings banks greatly exceed the individual deposits in the National banks.

It is entirely foreign to the purpose of this inquiry to institute any comparison between the two classes of institutions that would in any wise reflect on the National banks. Both the latter and the State banks as well are necessary to the industrial and commercial prosperity of the country and are fulfilling functions outside the scope of Savings banks, with which in fact they do not compete, except to some extent in the matter of receiving deposits. But the above figures are an impressive tribute to the soundness of the Savings banks and the care and ability with which they are managed. Of course, in rendering the great services which they do to commerce and industry, banks of discount must take risks from which Savings banks are exempt. A commercial bank can not be hedged about by the restrictions under which Savings banks operate. No doubt the superior safety of the latter class of banks is an important factor in drawing to them such large deposits, and would seem to justify a strong effort to bring all banks up to the highest possible standard. Although it would not be feasible to assure the safety of commercial banks in the same way as Savings banks are safeguarded—by narrowly restricting their investments—yet there is doubtless room for improvement without unduly hampering the operations of the banks. Someone has lately said that all bank failures are due either to dishonesty or incompetency. While it may not be possible to make all men either honest or capable, it may be possible to diminish the number of the incompetent and dishonest who get into the banking business. Only a small minority of banks ever fail, and by far the greater number are safe enough; but the comparatively few failures tend to cause distrust of all banks on the part of the timid. If absolute safety could be assured all depositors, the amount of money put into the banks would be greatly increased.

While safety and a fair dividend rate explain the remarkable growth of the Savings banks, there is another reason that should not be overlooked—the vast possibilities in the aggregate of small sums of money. The \$2,300,000,000 of Savings bank deposits in the New England and Eastern States is divided among over 5,000,000 depositors, the average to the credit of each depositor being about \$400.

No better illustration of the wonderful possibilities of the small depositor could be found than is afforded by the Bowery Savings Bank, of New York city, whose deposits reach a total of almost \$38,000,000, divided among about 140,000 depositors.

The interests of the Savings banks of New York State are jealously guarded by the New York Savings Banks Association, and an association has been formed recently which will be auxiliary to the American Bankers' Association and will embrace Savings banks in all parts of the United States.

At present the activities of Savings banks are confined chiefly to the Eastern and Middle States, but there appears to be no good reason why the system should not be gradually extended to other parts of the country.

The Savings banks are in many cases feeders of the commercial banks and are rarely their rivals. Both classes of institutions render a service to the community which neither could perform separately.

Since the resources of the Savings banks have reached such large proportions they have naturally attracted attention from the taxing powers, and it is conceivable that the charge will be brought forward that the laws have discriminated in their favor. It will require constant watchfulness to defend these semi-eleemosynary institutions from envious or ignorant legislative assaults.

The growth of Savings banks in the United States is a subject worthy of the careful study of every banker and financial student.

 i Does not include value of animals in cities estimated in 1900 at \$23,000,000.
 j 1800 to 1890, from Russell's Newspaper Directory.
 k 1820 to 1890, total alien passengers arrived year ending September 30.
 l 1813, 1814; but does include animals under 1 year of age, which were not included in figures of 1899.

a Includes mules.
 b Dr. Seether's estimate averaged for the period.
 c Pennsylvania anthracite shipments, 1850 to 1860; entire coal product 1870 to 1880.
 d In addition to this it is estimated that 10,000,000 barrels ran to waste in and prior to 1862 for want of a market.
 e 1845.
 f Andrew's Colonial and Lake Trade.
 g 1828 to 1886, inclusive, from census of 1880.
 h 1870 to 1900, from Russell's Newspaper Directory.
 i 1820 to 1890, total alien passengers arrived year ending September 30.
 j Years ending June 30 to date.

THE SMALL BANKER.

Is the small banker a skinflint? This inquiry is prompted by the following passage in a recent address by Mr. Horace White, the well known authority on financial and banking matters. Mr. White was arguing in favor of the issue of an asset currency by small banks, and to enforce his contention that they might be safely intrusted with the issue of such a currency, he said: "The large banks are generally conducted on liberal and broad-gauge principles. The small ones are usually in the charge of skinflints, and the skinflint policy, whatever else may be said of it, is the one most conducive to solvency."

It will be seen that Mr. White paid a tribute to the small bank, though he used his left hand in bestowing it. But was he right in his assertion that the small banks are usually in charge of skinflints?

One does not need to turn to the dictionary to find that the etymology of the word "skinflint" implies a disregard of the rights of property and of the feelings of others. To "skin" a man is not only to take his money or property, but also means to take it dishonestly, to cheat. Of course, Mr. White did not intend to say that the small bank is usually in charge of a cheat. What he meant was, obviously, that the small bank is usually in charge of men who are grasping and close-fisted and look narrowly to what they consider their own interests. But even this view is probably a mistaken one. The old-time country banker, perhaps, was frequently of this type. His portrait was finely drawn in an address delivered before the Indiana Bankers' Association some years ago by Mr. W. T. Fenton, Vice-President of the National Bank of the Republic, Chicago. Mr. Fenton made this picture all the more striking by contrasting the skinflint sort of banker with the modern progressive banker.

To be successful in the management of a bank to-day something more than the qualifications of a mere money-lender are required. The small banks could not have attained their present aggregate importance if they had been managed by skinflints. Progressiveness is no longer confined to the large city bank, but the manager of a small country bank is quite often as liberal and broad-gauged as his larger brother in the great city.

Mr. White, as the context of his address shows, was not reflecting on the small banks, but on the contrary he was contending that they are on the whole apt to be solvent; but he attributed this tendency, in part at least, to what he called "the skinflint policy." But the solvency of the small bank probably rests upon a broader foundation than this. The small banker of to-day is a man who knows thoroughly the people with whom he deals; he has lived for many years in the town where he does business, and fully understands the business wants of the community. He is alive to every opportunity for the profitable expansion of his line of deposits and discounts, for if he failed to be, a progressive rival would step in and take these profits from him. There are nearly ten thousand small banks in the country to-day with resources mounting into billions of dollars. These institutions have promoted the prosperity of the country to an extent that would have been impossible had they been chiefly "in charge of skinflints." Competition in banking is now so keen that reasonable liberality is just as essential as in any other line of business, and this applies to the small bank as well as to the large.

MEXICO'S PROGRESS AND PROSPERITY.

Two striking examples of transition from ancient systems and feudal usages to the broad pathway of progress, civilization and industrial advancement will attract the attention of the student of history of a future day. These instances of almost magical transformation are furnished by countries widely separated geographically, and strangely contrasting in the matter of racial characteristics and intellectual aspirations. It need scarcely be said that Japan and Mexico are the countries to which reference is made. In the evolution of these two modern nations are to be observed many things in common. Both emerged from the vortex of revolution and anarchy, and at about the same time. The tyranny of the Shoguns had its counterpart in the oppression of the Viceroy. The low condition of the laboring class in Japan, who cultivated the land, was not radically different from that of the Mexican peon who, dependent upon his patron, the wealthy *hacendado*, had neither hope nor aim beyond the attainment of a meagre subsistence.

In both instances the time was ripe for a change, and the men qualified to lead in making it were ready.

The Mikado was one, Porfirio Diaz the other. Japan in a remarkably short space of time, with feverish haste, it may be said, has arisen from almost the lowest depth of national insignificance to a position of power and dignity, abreast of the times in all the varied spheres of activity, material and intellectual, which are expressed by the terms progress and civilization. Less feverish in the race, but with a will equally indomitable, the people of Mexico, guided by an enlightened but cautious executive, are well advanced upon the same paths.

In the case of Mexico, while great problems have been solved, and remarkable progress made in industrial development, in education, and in building up the nation's financial credit, much remains to be accomplished. The greatest obstacles have been overcome, however. The people have learned the advantages born of peace and industry. The old conditions have gone for ever. Henceforward the course is upward. No man who has a dollar invested in Mexico need fear for its safety on the score of future political disquietude.

There may be only one Diaz, but the lessons which he has taught his grateful compatriots cannot be unlearned. Mexico is indebted to President Diaz for a quarter of a century of peace, during which time as pacificator and administrator he has labored indefatigably and wisely for the best interests of his country. The results may be briefly summed up, although the account of the people's indebtedness to him is a long one. Political discord no longer racks the country. The ablest men of all parties labor with a common purpose—the material and moral advancement of the nation. Five hundred million dollars of United States capital have been invested in railways, mines, agricultural and industrial enterprises. The Republic has been bisected with railways, and now stands at the head of all the other Latin-American countries in the matter of mileage. The aggregate of the lines in operation, according to the President's last message, was 17,756 kilometers. New lines are constantly being built. The nation's credit has been established upon a firm basis; its bonds are eagerly bought by investors. The coffers of the money-lenders of the world open at the nod of the country's able financial minister. Drainage works and other sanitary improvements have been carried out in several cities; prodigious undertakings in the way of harbor betterments have been successfully

brought to a close at important seaports, and inaugurated at others. The investment of foreign capital in a thousand lines of industrial activity has been invited and made secure. The cause of education has been carefully fostered. There is a schoolhouse in almost every hamlet. The church retains the people's respect, but it no longer wields political power. Cities have been modernized; electrical lighting and systems of traction transportation exist in all the larger municipalities. Improved methods of mining and agriculture have been introduced with success; manufacturing with the aid of modern machinery, and upon an extended scale, has been inaugurated in several lines. Mexico is an exporter of textiles to-day, and will be of steel rails to-morrow. Shoes, soap, perfumery, leather goods and a number of other manufactured articles, of excellent quality, are turned out in a score of cities where busy workers have learned to appreciate the satisfying rewards which wait upon intelligent efforts in peaceful pursuits. The Federal telegraph and postal systems have been developed to a high state of efficiency. As might be expected from a soldier so distinguished as General Diaz, in the long term of peaceful progress which the land has enjoyed, the possibilities of war have not been overlooked. Mexico's regular army of some 65,000 men is well-disciplined and well-equipped. Recently, steps have been taken towards the formation of the nucleus of a navy. But it is as a wise and judicious administrator, a nation builder, a leader of his people in the ways of peaceful achievement, rather than as a warrior, that President Diaz will loom in history. His illustrious services as a soldier will be dwarfed by his successes as a pacificator and as a statesman.

EXPANSION OF THE BANKING BUSINESS.

The influx of foreign capital has naturally been followed by an expansion of the banking business in Mexico. This growth has been remarkable, as the following figures show. On the first day of March of this year there were in the Republic thirty banks with a bill circulation of \$89,592,538, and capital of \$94,150,000. There was \$60,897,011 of silver coin on hand, and deposits amounted to \$192,154,761; bills discounted, \$125,600,162; loans on collateral, \$68,102,094.

A noteworthy feature in connection with banking expansion has been the introduction of trust companies in the capital, with branches in the leading provincial cities. These institutions appear to flourish in their new environment, where in addition to the functions peculiar to them in the United States they solicit business as real estate and mining brokers. Some of the banks have Savings departments, and the rivalry for this class of business has been keen between them in the past.

The oldest and most important banking institutions in the City of Mexico are the National Bank of Mexico and the Bank of London and Mexico. Following is the statement at the close of business, April 30, of the present year:

ASSETS.	National Bank of Mexico.	Bank of London and Mexico.
Specie.....	\$15,618,790.38	\$10,447,638.24
Notes of other banks.....	2,988,997.00	381,251.00

Provision fund.....	2,000,000.00	
Second provision fund.....	1,000,000.00	
Deposits on time.....		4,291,497.85
Total liabilities.....	\$108,263,663.87	\$60,371,570.70

Other banks make equally satisfactory exhibits.

MEXICO'S GROWING FOREIGN TRADE.

One of the best evidences of a nation's progress is that furnished by its trade with foreign countries. The totals of Mexico's foreign trade are constantly growing. In the eight months of the fiscal year 1902-1903, the country imported commodities to the value of \$49,619,835.92, gold; an increase over the corresponding period of the previous fiscal year of \$9,622,806.96; exports for the eight months first indicated aggregate \$122,102,958.31, silver, an increase of \$20,463,287.06. In one item only of the imports was there a decrease—that of animal substances. In the total of the exports the precious metals figure at \$80,108,868.12.

FLUCTUATIONS IN THE VALUE OF SILVER.

One serious problem confronts the Government—that is the instability of the Mexican dollar, the unit of the country's financial system. The violent fluctuations in its value abroad are a source of worry and loss to every one interested in the country's development, and of acute perplexity to the Government. What a poor crutch this dollar is to rely upon in international trade is vividly demonstrated by the movement of exchange between the dates of April 17 and 28 of this year, here shown:

	Rate of exchange.		Rate of exchange.
April 17.....	258	April 23.....	248
April 18.....	255	April 24.....	236
April 20.....	252½	April 25.....	231
April 21.....	251½	April 27.....	222
April 22.....	251¾	April 28.....	222

The attention of the Government is now directed to this disturbing factor, and to the problem involved in giving to the peso greater stability. That a solution will be found, and that the right and best one, only those unfamiliar with the great obstacles to the country's advancement which the executive and his advisers have met and successfully overcome in the past, can for a moment doubt. The settlement of this important question may furnish to economic history another point of similarity in the progressive careers of Mexico and Japan.

JOHN JAMES DAVIES.

DURANGO, Mexico.

FORCIBLE COLLECTION OF INTERNATIONAL DEBTS.—The fact that Venezuela and her pressing creditors have been able to agree upon the amount due to each of them, and upon a method of payment, should not close our eyes to the fact that our Monroe Doctrine as it stands to-day is a greater danger than it need be to us and to European States.

As the Monroe doctrine is now understood in Europe, every European nation feels free to resort to force in collecting a claim from a South American State without first proving to disinterested parties that the claim is just; although the doctrine, rightly understood, would require us to interfere, if we were in doubt as to the justice of the claim. By judging in its own case, and proceeding to violent collection of an alleged but unadjusted claim against a South American State, any European nation might involve all Europe and America in war. This fact constitutes an international disease, for the cure of which a new principle ought to be inserted in the law of nations, namely, that henceforth no nation shall proceed to violent collection of a claim against another nation without first proving to disinterested parties that the amount claimed is justly due. It is to the interest of all nations that such a principle shall be agreed upon, and that the Hague Court shall be selected as the judge in such matters.—*Gunton's Magazine*.

STATE BANKERS' ASSOCIATIONS.

REPORTS OF RECENT AND PROSPECTIVE MEETINGS.

COLORADO BANKERS' ASSOCIATION.

An interesting meeting of the Colorado Bankers' Association was held at Denver, June 17, 18 and 19. Ex-Governor Alva Adams was one of the speakers. He highly commended the banking laws in force in Kansas and Missouri, and said that it was only a question of time when Colorado would enact laws regulating State and private banks.

The following officers were elected : President, M. D. Thatcher, President First National Bank, Pueblo ; vice-president, W. L. Bush, Cashier First National Bank, Idaho Springs ; secretary and treasurer, G. H. Williams, President Mercantile National Bank, Pueblo. Delegates to the convention of the American Bankers' Association chosen were : Ex-Gov. Alva Adams, President Pueblo Savings Bank ; F. G. Moffat, Cashier First National Bank, Denver.

A banquet at the Brown Palace Hotel was an enjoyable feature of the convention. Next year's convention will be held at Pueblo.

FLORIDA BANKERS' ASSOCIATION.

At the annual convention of the Florida Bankers' Association, June 12, the following officers were chosen : President, J. T. Dismukes, President First National Bank, St. Augustine ; vice-presidents, G. D. Munro, Cashier Quincy State Bank ; J. M. Graham, President First National Bank, Gainesville ; L. M. Fraleigh, Vice-President Madison County Bank, Madison ; secretary and treasurer, J. D. Baker, Assistant Cashier National Bank State of Florida, Jacksonville ; executive committee, E. W. Lane, President Atlantic National Bank, Jacksonville ; H. G. Aird, Cashier State Bank, Jacksonville, and F. W. Hoyt, President First National Bank, Fernandina ; legislative committee, E. S. Crill, L. C. Massey and G. W. Saxon. J. C. L'Engle, President of the State Bank of Florida, Jacksonville, was elected delegate, and W. B. Owen, Vice-President of the Commercial Bank, Jacksonville, alternate to the convention of the American Bankers' Association.

GEORGIA BANKERS' ASSOCIATION.

The twelfth annual convention of the Georgia Bankers' Association was held at Atlanta, June 17 and 18. There was a large attendance, including a number of bankers from other States. President F. D. Bloodworth, in his annual address, briefly reviewed the business progress of the country in the past six years. A notable feature of the convention was the address by Hon. William B. Ridgely, on "Gold Reserve National Bank Notes." This address is printed in full in another part of this issue of the MAGAZINE.

L. P. Hillyer, Cashier of the American National Bank, Macon, read his report as secretary of the association. It showed a membership of 194 banks, an increase of 36 since the date of the last convention.

A very able and instructive paper on the "Dishonesty of Bank Clerks" was read by Andrew J. Hansell, Cashier of the Bank of Randolph, Cuthbert, Ga. In concluding his paper, Mr. Hansell said :

"In closing, I beg to state, in justice to my fellow employes and associates, that the head of the greatest fidelity and bonding company in the whole world, Mr. H. D. Lyman, of New York, assures me that there is less dishonesty among bank clerks, proportionately to their number, than in any other occupation in life. I therefore consider it no mean privilege to count myself one of the most honest class of citizens on the face of the earth.

In the foregoing I have endeavored to show :

- (1) That dishonesty has always existed.
- (2) That it exists to-day without perceptible decrease, and will continue to exist in the future, since it has not decreased in the past.
- (3) That the only cure for it is the improvement of the individual.
- (4) That dishonesty in banks is not the fault of systems, and cannot be prevented thereby.
- (5) That systems, while they cannot prevent dishonesty, deprive the dishonest, in a large measure, of the opportunity they seek.
- (6) That our present remedy lies solely in the selection of employees and the maintenance of proper methods and safeguards."

Other topics discussed were : "Protest Law," by Oscar E. Dooly, Cashier Home Savings Bank, Macon; "A State Auditor," by W. D. Manley, Cashier Farmers and Traders' Bank, Atlanta.

The following officers were elected : President, S. B. Brown, President Albany National Bank; first vice-president, Miller S. Bell, Cashier Milledgeville Banking Co.; second vice-president, Oscar E. Dooly, Cashier Home Savings Bank, Macon; third vice-president, L. R. Farmer, President Davisboro Bank; fourth vice-president, J. E. Dunson, President La Grange Banking and Trust Co.; fifth vice-president, E. C. Smith, Cashier Griffin Banking Co.

Delegates to convention of American Bankers' Association : John H. Reynolds, President First National Bank, Rome; A. J. Hansell, Cashier Bank of Randolph, Cuthbert; C. D. Hurt, Cashier I. C. Plant's Son, Macon.

An entertainment and luncheon were given the visiting bankers at the Piedmont Driving Club and a banquet at the Kimball House. The entertainments were in charge of a local committee, composed of J. T. Orme, Thomas J. Peeples and Frank Hawkins. They were tendered a vote of thanks by the convention for their successful efforts in making the meeting an exceptionally pleasant one.

MAINE BANKERS' ASSOCIATION.

At the annual convention of the Maine Bankers' Association, held June 10, the following officers were elected : President, W. D. Mussenden, Treasurer Bath Trust Company; vice-president, E. G. Wyman, Cashier First National Bank, Bangor; secretary, John R. Gould, Augusta; treasurer, G. A. Safford, Cashier Northern National Bank, Hallowell; executive committee, S. C. Parcher, Cashier York National Bank, Saco; Thomas H. Eaton, Cashier Chapman National Bank, Portland, E. F. Berry, Cashier North National Bank, Rockland; E. L. Smith, Cashier National Shoe and Leather Bank, Auburn; R. D. Woodman, Treasurer Westbrook Trust Co., Westbrook.

MICHIGAN BANKERS' ASSOCIATION.

The fifteenth annual convention of the Michigan Bankers' Association was held at Pointe aux Barques, June 17 and 18. President George D. Morley, in his annual address vigorously attacked the laws of Michigan in regard to bank taxation. He stated that the present law, if enforced, would deprive savings investors of seventy-

five per cent. of their income and would cause heavy withdrawals from the banks. He favored a wise law and its honest enforcement, instead of the present law, some of the provisions of which the taxing authorities were compelled to ignore.

Secretary Fred. E. Farnsworth reported that the association now numbers 279, a gain of twenty-one during the year. The membership is now the largest in its history. There are now 585 banks and banking institutions in Michigan.

Treasurer H. V. C. Hart, of Adrian, reported receipts from the former treasurer and from dues of \$3,017.91. He had paid out \$1,717.53, leaving a balance on hand of \$1,800.38.

The subject of taxation was further discussed by State Tax Commissioner Freeman. He called attention to the fact that the present State Tax Commission has placed \$450,000,000 additional on the tax rolls. He declared that \$300,000,000 more ought to go on the rolls. Opposition hindered the speedy spreading of this amount, he said, but he promised that \$100,000,000 more would be on the roll by October, 1903.

Wm. Livingston, of Detroit, spoke on fidelity bonds and burglary insurance. He strongly urged the adoption of the form of bond recommended by the Michigan Bankers' Association and the American Bankers' Association.

Hon. Charles N. Fowler, Chairman of the Banking and Currency Committee of the House of Representatives, made a strong address in favor of a credit currency.

William Livingston, President of the Dime Savings Bank, Detroit, was elected president for the ensuing year, and Orrin Bump, President of the Old Second National Bank, Bay City, and Scott Field, Cashier of the Merchants' Savings Bank, Battle Creek, vice-presidents. Treasurer Hart and Secretary Farnsworth were re-elected.

The social features were especially enjoyable and Pointe aux Barques was voted by all to be an excellent place to hold conventions. The bankers of Saginaw also extended a hospitable greeting to the visiting bankers. Next year's convention will be held at Detroit.

MINNESOTA BANKERS' ASSOCIATION.

The fourteenth annual convention of the Minnesota Bankers' Association was held at St. Paul, July 7, and 8, an especially interesting programme having been prepared.

A report of this convention will appear in next month's issue of the MAGAZINE.

TENNESSEE BANKERS' ASSOCIATION.

The thirteenth annual convention of the Tennessee Bankers' Association met at Lookout Inn, Chattanooga, June 22.

The convention was called to order by Vice-President T. J. Taylor, Cashier of the Bank of Martin, who presided over the meeting in the absence of President Buckingham, who was detained at his home in Memphis on account of illness.

The convention was opened by prayer by Rev. Dr. J. W. Bachman, after which Mayor Chambliss delivered the address of welcome on behalf of the City of Chattanooga. T. G. Montague, President of the First National Bank, followed Mayor Chambliss, delivering a brief address of welcome on behalf of the Chattanooga Clearing-House. F. O. Watts, President of the First National Bank, Nashville, responded on behalf of the bankers.

The secretary read a telegram from Hon. M. S. Buckingham, regretting his inability to be present at the convention on account of illness. He wished the asso-

ciation a successful meeting and gave assurance of his hearty co-operation in every movement inaugurated by the association.

The association adjourned to allow the State bankers' section the use of the hall.

This section dispatched considerable business and listened to an able discussion of matters pertaining to State banks, by J. Arnold, President of the Bank of Cookeville.

At the afternoon session Secretary W. A. Sadd, President of the Chattanooga Savings Bank, read his report. No meeting was held last year, but at the convention two years ago the membership was but sixty; now there are 184 members.

F. O. Watts, President of the First National Bank, Nashville; Theo. G. Montague, of the First National Bank, Chattanooga, and C. O. Austin, of the National Bank of North America, Chicago, discussed the subject of fidelity insurance for bank employees. Mr. Austin explained the experiences of the bankers of Missouri, and showed how by co-operation many desirable improvements had been secured.

W. O. Jones, Assistant Cashier of the National Park Bank, New York city, made a brief address in which he spoke of the good work done by the Tennessee Bankers' Association.

T. R. Preston, President of the Hamilton Trust and Savings bank, of Chattanooga, read a highly interesting paper on State banks and State bank legislation.

S. H. Orr, general manager of the Nashville Trust Company, discussed the subject of trust companies and the laws relating thereto in the State of Tennessee. He pointed out many instances where the Legislature should take steps to repeal certain laws which were unnecessary and unjust.

At the second day's session Rollin P. Grant, Cashier of the New York National Exchange Bank, New York city, read a paper on bank money orders, and the subject was further discussed by H. E. Jones, President of the Dominion National Bank, of Bristol, and by I. B. Tigrett, Cashier of the Union Bank and Trust Co., Jackson.

On motion I. B. Tigrett, H. E. Jones and W. A. Sadd were appointed a committee to draft and put in immediate service a banker's money order for the State association.

F. A. Pattie, Cashier of the Bank of Winchester, read a paper on "The Country Banker," which was in part as follows:

THE COUNTRY BANKER.—BY F. A. PATTIE.

Mr. Edison once said "the least one knew about electricity the better he understood it."

This cannot be said of the banking business, especially of country banking, as doubtless all present who are or have been country bankers, can testify. As it is not an uncommon thing for the country banker to be Cashier, paying and receiving teller, discount, collection and exchange clerk, it is absolutely essential that he be thoroughly familiar with every detail of his business. He must have a place for everything, keep it there, and then familiarize himself with these places.

A great many customers of country banks, especially out-of-town customers, object to being waited upon by anyone except the Cashier no matter how many efficient clerks he may have. This is perfectly natural, and you should see to it that all callers at your bank, whether customers or not, are given a hearty welcome, and are made to feel perfectly easy and at home. Greet them in a pleasant manner, and with a real warmth of feeling.

The country banker must necessarily put his heart into his business and must, of all men, be faithful to his routine of work. A few days, a week or a month from his desk removes him from the midst of his business, lessens his familiarity with its every detail in which lies his greatest strength. It is also necessary that he surround himself with stockholders and directors whose business ability and financial, as well as social, standing in the community have never been questioned, and who are ready and willing at all times to lend a helping hand in advancing the bank's interests.

The country banker to be successful must use some policy; he must also be a man of tact, and possessed with sufficient ability along this line to apply pressure where needed without giving offence and to say "no" when necessary without losing the customer. In many cases

he must be indulgent and forbearing; while favor and benevolence are not as a rule attributes of sound banking, it cannot be denied that they have been the means of collecting, in full, many a note that could not otherwise have been paid, thereby cementing to the bank a lasting friend and probably a very valuable customer. But in all dealings he must not overlook the fact that he is serving both the bank and the customer.

The most important and most trying of all duties of the country banker is passing on notes offered his bank and granting loans to his customers. When a loan is applied for, especially by an out-of-town customer, the banker is supposed to be sufficiently acquainted with the financial condition of the party to give him an answer immediately. In many cases nothing short of this will suffice; while you are waiting until after dinner to make some inquiry or to refer the matter to your discount committee, he is probably arranging or has arranged with your neighbor for the amount needed, in which instance it will very likely be some time before he calls again. Nevertheless, utmost care should be observed in granting loans. And I do not mean to even intimate that the discount committee should be dispensed with, as it is a reserve that enables you to decline many a loan, retaining your customer who otherwise would become offended. When a loan is refused by a city bank, I understand no explanation is given or expected, further than that the paper was not approved or that their loans were full, and they could not handle it; that explanation is supposed to close the transaction. On the other hand, when an out-of-town customer presents a note to a country bank and one that he knows you know is good, and you hesitate, asking him questions, he thinks you are casting some reflection on his integrity or his ability to meet his obligations; in fact, he is surprised as "everybody knows him," and when you finally tell him that your loans are full, and that you do not care to increase them, the impression is immediately created in his mind that the bank is in a bad way, is entirely out of money and liable to break at any time. He never stops to consider for a moment that it is possible for a bank to have any limit to its loaning capacity, and in many instances doesn't hesitate to circulate in his neighborhood, the report that he applied to your bank for a loan and you actually didn't have the money.

The bank with which I am connected lost at one time deposits aggregating \$3,300 as the direct result of refusing a loan of \$100, on a good note, on the grounds that our loans were full. I presume it is needless to say that they haven't been full since. You will be criticized for making certain loans and also for refusing them. While it is impossible to follow any iron-clad rule along this line, the banker who has the ability to turn down a customer sending him away with the feeling that in failing to secure the loan he has been shown a personal favor, has about solved the problem.

The banker is the only business man on earth who cannot, at times, ask his customers to wait. For him there is no waiting and no mercy. His obligations must be met the moment they are demanded, or his business career must end. His customers, or rather the customers of the country banker, do not meet their obligations promptly; in fact, they are not expected to. Who present has not been appealed to "to hold my note a few days," or gotten a note from an out-of-town customer saying: "I don't want to take the present price for my wheat, so will renew my note when I come to town," or "My hogs are not fat, please hold my note, and I will attend to it next 'first Monday.'" While you all know that "a few days" may mean any period of time from a week to twelve months, the country banker cannot do otherwise than cheerfully comply with such requests.

This is what the country banker must face every day. Accept deposits and determine what per cent. may be loaned and to whom, and still meet every obligation promptly. Determine what maturing loans shall be extended, and what reduced or collected in full. In addition to this he must familiarize himself with all the books and other stationery required by his bank, keep himself posted on prices of same, and make purchases when necessary. He must also see that the work of each clerk is performed in a satisfactory manner, and that strict economy is enforced, as it is unnecessary to use an enclosure blank requiring two-cent postage when a card would answer.

In conclusion, need I say that the country banker holds a most responsible position? With everybody's money in his safe, everybody's papers in his vault, and I might say everybody's secrets in his heart, it is not surprising that all his actions are closely watched and talked about by everybody in his community.

Resolutions were adopted favoring the Aldrich bill, fixing the membership dues at \$5 irrespective of capital, thanking the Chattanooga Clearing-House and others for courtesies, and commending the work done by the officers of the association.

Officers were chosen as follows:

President—W. A. Sadd, President Chattanooga Savings Bank, Chattanooga.

Vice-President for East Tennessee—W. P. Lang, Cashier Cleveland National Bank, Cleveland.

Vice-President for Middle Tennessee—E. A. Lindsey, Cashier Merchants' National Bank, Nashville.

Vice-President for West Tennessee—E. A. Maddux, Cashier Fayette County Bank, Somerville.

Secretary—Samuel H. Orr, General Manager Nashville Trust Company, Nashville.

Treasurer—I. B. Tigrett, Cashier Union Bank and Trust Company, Jackson.

Members Executive Council for Term of Three Years—J. Arnold, President Bank of Cookeville, Cookeville; R. N. Hutton, Cashier Bank of Bellbuckle, Bellbuckle; T. R. Preston, President Hamilton Trust and Savings Bank, Chattanooga.

Members Executive Council for Term of Two Years—J. P. Gaut, President Holston National Bank, Knoxville; L. E. Ward, Cashier Bank of Collinsville, Collinsville, N. P. LeSueur, Cashier American National Bank, Nashville.

Members Executive Council for Term of One Year—J. T. Howell, Cashier Fourth National Bank, Nashville; R. L. Goolsby, Cashier Greenfield Bank, Greenfield; C. W. Schulte, President First National Bank, Memphis.

C. M. Preston, Cashier of the Hamilton Trust and Savings Bank, Chattanooga, and F. O. Watts, President of the First National Bank of Nashville, were elected to represent Tennessee at the next meeting of the American Bankers' Association, which will be held in San Francisco in October.

Upon motion of T. R. Preston the presidents of the association were made ex-officio members of the executive council.

After taking dinner at Lookout Inn the members of the association took a trip to Chickamauga Park as the guests of the Chattanooga Clearing-House. The afternoon was pleasantly spent in viewing the historic battlefield.

VIRGINIA BANKERS' ASSOCIATION.

The tenth annual convention of the Virginia Bankers' Association was held at Lynchburg, June 18 and 19, Oliver J. Sands, President of the American National Bank, Richmond, presiding. Addresses of welcome were made by N. R. Bowman, of Lynchburg, and Hon. John W. Daniel, United States Senator from Virginia, and J. B. McCabe, Vice-President of the People's National Bank, Leesburg, responded on behalf of the bankers.

President Sands then delivered his annual address, which was in part as follows:

PRESIDENT'S ANNUAL ADDRESS.—BY O. J. SANDS.

Generally the past year has been a prosperous one, still the banks have felt more keenly than for some years the inadequacy of our financial system, on account of its lack of flexibility, to meet the demands of our customers at certain seasons. A currency system that contracts when we need more money and expands when additional money is not necessary; a currency system which is controlled almost entirely by the price of Government bonds; a currency system that can only be contracted at the rate of three million dollars per month; a currency system that is not sufficiently profitable to the issuing banks to induce them to issue more than fifty per cent. of what they are permitted to issue; a currency system made to meet a great crisis in the financial affairs of a country emerging about forty years ago from the greatest civil conflict in the history of the world, which country has grown 300 per cent in population since that time, and whose wealth has increased in ten years over twenty-nine billions of dollars, is not the currency system needed to meet the changed conditions of this day. Nor is the Treasury system founded sixty years ago upon the prejudice of Andrew Jackson against the banks, which takes from the people the money and locks it up when it is most needed for the purposes of credit, a system such as this country needs to-day.

We bankers of the South know as well, or better perhaps, than any other people in this land that some system should be devised that will render the currency more elastic and that will give us a basis of credit that will expand and contract as the demands of business may

require. We may have our vaults filled with the best securities of our section and still be unable to supply more credit to the most worthy business man or farmer because we had borrowed or rediscounted all our Eastern friends would let us have, or all that we felt it was prudent for us to borrow. It seems that the time for action has come, some profit gained from the experience of the past and some steps taken that will insure us a continuation of the prosperity which we have enjoyed, and which a kind Providence seems to have destined us, provided we do our part. George Washington said, "We ought not to look back unless it is to derive useful lessons from past errors, and for the purpose of profiting by dear-bought experience."

Our present bond-secured circulation has proved such a sound system that to disregard it and return to any general system of asset currency seems to me to be an experiment that this country is not ready to make. I venture to suggest, that if the present tax on circulation is withdrawn and thereby giving the banks some profit in circulation, that there will be an immense increase in our bond-secured circulation. The Treasury notes or greenbacks should be retired by the issuance of a low-rate bond. These Treasury notes have cost the Government more than the interest on bonds of a like amount at four per cent. and have been the source of much disturbance in times past.

Banks should then be permitted to deposit Government bonds to secure Government deposits without interest, and to be required to pay a small interest to the Government on Government deposits secured by other Government bonds; the Secretary of the Treasury depositing public moneys received from all sources in such depositories as give satisfactory security. The provision for the retirement of only three million dollars per month should be repealed or changed so as to permit a larger amount of circulation to be retired when not needed; and some provision made for the issuing of a small amount of emergency circulation secured by deposits of approved securities with clearing-house boards under governmental authority, which emergency circulation should be taxed so high as to make it available only in times of great need. In my humble judgment if these changes could be made we would, without departing violently from our present system, so improve and enlarge its operation as to make it meet the needs of this great and growing country for a number of years to come.

It has been said that "unfortunately this most vital proposition depends, to a large extent, for its solution upon the action of Congress, and Congress is governed largely by the supposed political effect which such action may produce, that the first consideration of a Congressman is to secure his re-election, and therefore Congressmen want to know what their constituents think," and "as important as it is that our lawmakers shall agree upon a currency reform bill, of even more importance it is that banking men shall get together and agree upon what kind of measure is most desirable and will be acceptable to the banks. Such a measure must meet with the approval of the banking interest as a scientific and practical measure, but must be of such a character as to make its acceptance profitable to the banks. If banks cannot make money out of the transaction they will neither take out circulation nor accept Government deposits."

GROWTH OF BANKING IN VIRGINIA.

I have compiled from the reports made to the Comptroller of the Currency and from the reports made to the Auditor a statement showing the growth of the banking business in our State during the past two years:

April 24, 1901, number of State banks was 107; April 9, 1903, number of State banks was 137; an increase of thirty. April 24, 1901, number of National banks was forty-six; April 9, 1903, number of National banks was sixty-one; an increase of fifteen. April, 1901, banks and trust companies which do not make reports to Auditor or Comptroller, twenty-three; April, 1903, banks and trust companies which do not make reports to Auditor or Comptroller, twenty-eight; an increase of five; or a total increase in number of banks in two years of fifty.

State Banks.

	<i>Capital.</i>	<i>Surplus.</i>	<i>Deposits.</i>
April 9, 1903.....	\$7,333,774.53	\$4,476,236.96	\$30,974,405.87
April 24, 1901.....	6,221,800.40	3,786,775.08	25,935,020.85
Increase.....	\$1,111,974.13	\$789,461.88	\$5,039,385.02

National Banks.

	<i>Capital.</i>	<i>Surplus.</i>	<i>Deposits.</i>
April 9, 1903.....	\$6,597,500.00	\$5,782,632.05	\$39,825,049.71
April 24, 1901.....	5,262,620.00	4,462,804.15	28,737,160.29
Increase.....	\$1,334,880.00	\$1,319,827.90	\$10,087,889.42

Banks and Trust Companies which do not make reports.

	Capital.	Surplus.	Deposits.
April, 1908.....	\$2,564,890.00	\$1,181,596.00	\$4,195,206.00
April, 1901.....	2,380,840.00	537,060.00	2,426,280.00
Increase.....	\$183,990.00	\$644,546.00	\$1,768,926.00

Or a total increase in two years of: capital, \$2,630,844.13; surplus, \$2,708,835.78; deposits, \$16,896,200.44.

Or an increase in capital in two years of about 20 per cent.; or an increase in surplus in two years of about 30 per cent.; or an increase in deposits in two years of about 30 per cent.

The remainder of President Sands' address dealt with the work of the association, State legislation, etc.

N. P. Gatling read his report as secretary, showing a membership of 180, an increase of seventy-six in the past year. Reports of committees dealing with State taxation, bank money orders, and financial legislation were read and ordered received. John M. Miller, Jr., Cashier of the First National Bank, Richmond, read a report as delegate to the New Orleans convention of the American Bankers' Association.

John F. Bruton, President of the First National Bank, Wilson, N. C., read an interesting paper on "The Country Banker," Geo. Bryan, of Richmond, spoke on "Banking Law," and at the second day's session, Geo. J. Seay, Cashier of the Petersburg Savings and Insurance Co., spoke on the Fowler and Aldrich bills, and E. C. Massie, of Richmond, spoke on "The Torrens System of Land Registration."

Resolutions were adopted favoring a uniform system of blanks for letter-heads, check, drafts, etc., and recommending the adoption of the Torrens system of registering real estate titles.

H. L. Schmelz, of Schmelz Bros., Hampton, was chosen president, N. P. Gatling, of Lynchburg, secretary, and H. A. Williams, of Richmond, treasurer.

WASHINGTON STATE BANKERS' ASSOCIATION.

The next annual convention of the Washington State Bankers' Association will be held in the city of Whatcom, Thursday, Friday and Saturday, July 23, 24 and 25, 1908.

The convention promises to be the most successful in the history of the association, and we hope you will arrange to have at least one representative of your bank present. The programme as thus far arranged will include the following addresses: President's address, Hon. Miles C. Moore; "The Theory and Practice of Banking," Geo. S. Brooke, Pres. Fidelity Nat'l Bank, Spokane; "Bank Money Orders," Edwin Goodall, New York city; "Asset Currency," Hon. E. O. Graves, V.-Pres. Washington Nat'l Bank, Seattle; "The Country Banker," Thos. H. Brewer, Cashier Genesee Exchange Bank, Genesee, Idaho; "The Duties of a Banker," A. L. Mills, Pres. First Nat'l Bank, Portland, Oregon; "Clearing-House Emergency Circulation," Theo. Gilman, New York city; "The Trust Company and the Bank," Chas. S. Miller, Washington Trust Company, Seattle; "Where You're At—Fact and Prophecy," Geo. B. Burk, Cash. Henry Andrews & Co., Fairhaven, Wn.; "Bankers as Conservators of Credit," Benj. C. Wright, Editor "Finance and Trade," San Francisco.

The bankers and commercial organizations of the Bellingham Bay cities have arranged a very delightful social programme, the most novel part of which will be a visit by steamer to the great fish-traps and canneries of Puget Sound, affording the visitors an opportunity of seeing salmon caught literally by the tens of thousands.

Special entertainments will be made for the ladies who accompany the delegates, and they are, of course; cordially and urgently invited to attend.

Reduced rates will be extended by the railroads and steamboat lines. Further details will be sent later.

TACOMA, Wash.

P. C. KAUFFMAN, *Secretary*.

WEST VIRGINIA BANKERS' ASSOCIATION.

The tenth annual convention of the West Virginia Bankers' Association was held at the Progress Club, Parkersburg, June 8 and 4. J. B. Finley, Secretary of the Citizens' Trust and Guarantee Co., welcomed the convention to Parkersburg on behalf of the local bankers. Mayor Allan C. Murdoch also made an appropriate speech of welcome. A response in the name of the convention was made by H. R. Warfield, Cashier of the Elkins National Bank. President J. D. Baines then delivered the annual address. He spoke of the progress and prosperity of the banks and other business interests of the State, but cautioned the bankers that such times were apt to beget undue speculation, which must be carefully guarded against.

Robert L. Archer read his report as secretary and treasurer of the association. It showed a membership of 153—the largest ever reported. In number the membership represents four-fifths of all the banks in the State and perhaps nine-tenths of the banking capital. The financial report showed a balance of over \$1,000 on hand. Reports of other committees were presented relating to taxation and other matters.

At the second day's session an address was delivered by John J. Coniff on the "Evils of the National Bankruptcy Law." W. W. Mills, President of the First National Bank, Marietta, Ohio, spoke on "The Twentieth Century Banker," he said in part:

THE TWENTIETH CENTURY BANKER.—ADDRESS OF W. W. MILLS.

During such an era of prosperity and springing up of such a large number of banking institutions, it is natural that competition for new business has been keen. It seemed to me, possibly, that some of my brother bankers on this side of the river had recently formed the idea that their banking institutions were philanthropic enterprises, for I have noticed a disposition to give to the needy depositor a very large percentage of earnings in some instances in the way of interest. Possibly a bank may be a philanthropic institution in some regards, but it occurs to me that primarily a bank is established for the benefit of its stockholders and for the safeguard of its deposits and not for the purpose of giving a pleasant and safe opportunity for investment on the part of depositors. I refer now to commercial banks only. The Savings banks have a field peculiarly their own, and Savings banks are in a sense philanthropic institutions, and should pay to their depositors the very highest interest possible.

I have sometimes wondered, too, as to our methods of soliciting business—for I count myself one of you—in a sense an onlooker, yet I am also a participant in your affairs. For Southeastern Ohio and all of West Virginia are so tied together by a multitude of business bonds that our interests are practically identical; so I have wondered, in the keen competition for business, if we do not sometimes overstep the bounds of courtesy and good business breeding in our anxiety to win for our own institutions the business and clientele of prosperous depositors and business people.

We sometimes, too, are a little jealous of the success of other banks. The world is large; it is big enough for all of us, and West Virginia and Southeastern Ohio are large enough for you and me, and all of the fraternity to do business in and leave a little room for somebody else. So if it happens that somebody has a larger deposit line than we have or seems to be doing a larger business, let us not be jealous of his success, but rather let us glory in it, and advise the depositor, advise the business man, if he doesn't do business in our bank to do it in some other bank in the same community.

While looking over your State and considering such things as these my thoughts run far into the future, and I wonder of what manner of man the banker of the twentieth century is to be. The accomplishment of West Virginia, the building up of its enterprises and the development of its great resources, the construction of these magnificent financial institutions,

have been accomplished practically in the nineteenth century. We are standing on the threshold of the twentieth. Of what manner of man, I say, is the banker of the twentieth century to be? We will all acknowledge at the outset that our business has a certain narrowing tendency. We become absorbed in it; we permit the business hours to overstep the usual hours for opening the bank doors and we toil early and late, intent upon building up our own institution. We are careless about the matter of vacation; we are indifferent about taking journeys into neighboring fields or States or countries, and so we are hemmed about by the four walls of our bank offices; our views are restricted and thus, I say, there is a narrowing tendency in the business. The banker, too, is in a measure an autocrat. He arbitrates, he assumes a great many things as arbitrator, and as an autocrat and as a leader of men, so that after awhile he sits back in his chair somewhat indifferent of all the outside world, anxious only to please himself, his stockholders and his customers. Thus there grows up in time in our bankers a narrow blighted life, unworthy the business, unworthy the high calling in which you and I are engaged. Some of the meanest, some of the most parsimonious, some of the smallest men that I ever met, and I say it with shame, have been men at the head of some of our banks. I think the meanest man I ever met on earth was the President of a National bank. I had business with him. I don't think he deserved a particle. I know our relations were soon closed. Such a man is a disgrace to his office and to his calling. When Shakespeare wanted to depict a mean, close-fisted, hide-bound character, he selected a banker and called him Shylock, and that name is to-day typical of all that is mean, not only in the banking fraternity, but in the whole business world.

The tendency, gentlemen, is to make bankers—to make you and me—men of this type. We are drawn to it every day; we must face it, and we must resist it and overcome it. If we do, we will be worthy to stand among our fellows as men, and worthy to set the pace for the bankers of the twentieth century.

In the first place, I believe that in the coming days education and thorough preparation for the business will be an absolute essential. I think that a study of banks and banking methods and banking law will become necessary to the banker of the twentieth century. He must be a man who shall give thought to the great problems that come before him daily. He must be one who is able to weigh the different propositions that come before him for consideration. He can only do it by a thorough course of training. Many in the business to-day are attracted to it by the money there is in it, or that they fancy there is in it. Such are not properly members of the banking profession. We all have gone into it for that reason, but it seems to me that the banker of the twentieth century must have a loftier idea than the mere money value of the profession he enters. We must study the best ideals of the public.

One hundred years ago Hamilton and Gallatin and Morris were the leading financiers of the country. To-day we have names, equally as eminent, conducting businesses vastly greater, whose lives are worthy of emulation. But it is well for us to study the lives of these ancient giants, and to get out of them that which will be helpful in this, the twentieth century.

BANKERS MUST BE PROGRESSIVE.

The second point: The twentieth century banker must understand—he must be thoroughly up to date. In other words, he must have an immense amount of up-to-dateiveness. He must realize that he is doing business in the present century, and not in the nineteenth century. Unless he does realize this and governs himself accordingly, he will be jolted off the car of progress and ground under its wheels.

Banking methods are undergoing an evolution. There is improvement all along the line, and the twentieth century banker must be in line with his fellows, or he will drop behind the procession. His office should be modern; it should have every equipment that the ingenuity of the architect and of man can devise for the facilitating of business and for the safeguarding of the valuables and securities placed in his hands. His books must be of the latest character; he must have the most improved methods of keeping his loans and discounts and looking after his credits, and of caring for his money, his bonds and the other property that is placed in his keeping. It is absolutely necessary that he be abreast of the times in all these things, and I regard this as one of the essentials of the twentieth century banker.

Another point: If that banker be in charge of the institution with which he is connected, it seems to me he must set his face like flint against overworked and underpaid employees.

I believe that the boys in the office, and the girls, too, for the army of helpers amongst the young women is growing, should be adequately compensated for their labor. I believe that gentlemen doing business in the twentieth century ought not to be entirely satisfied with the meagre salaries that were paid years ago in the nineteenth century. The banks are making money, they are all making money, and let us not be satisfied—I am sure it cannot be true on this side of the Ohio River, but let those living and doing business on the other

side of the Ohio River not be satisfied to have overworked employees being paid too little money.

Another point that the twentieth century banker must realize, and that is the great trust which rests upon him. We are all trustees, trustees for the communities in which we live. Into our hands is placed the keeping of large sums of money, amounting up to millions of dollars in many instances. The sums represent the savings in many instances of the widow and of those who are dependent to a certain degree upon the toll of others. But wherever the money comes from, it is placed into your hands and mine because the people have confidence in us. They make us their trustees, and therefore we should realize the high and noble and responsible trust that we assume in the eyes of the community, and, therefore, the twentieth century banker will be a man of clean hands and of pure heart. No money that comes across the counter belonging to the depositors will stick to his hands. The cleanliness of his hands and the purity of his heart will prevent him from doing that in the management of the business that will militate in the slightest degree against the interests of those who have confidence in him, and who deposit their all in his keeping.

THE VALUE OF POLITENESS.

I would mention in this connection as an important feature of the twentieth century banker an important characteristic, that of courtesy. I wish to read to you the testimony of George G. Williams, the President of the Chemical National, who has recently died. You all know George G. Williams by reputation. He was a giant among men, and he was a man of clean heart and pure hands, and a man of the broadest sympathies, and at the same time deeply interested in all that was best for his community and for the world, and earnestly intent upon building up his bank and of accomplishing everything possible for its aggrandizement. Mr. Williams at one time used this language: "Too often the man who wears a shabby coat is subject to discourtesy, but I have observed that many a tattered garment hides a package of bonds, and that gorgeous clothing does not always cover a millionaire. A grain of politeness saves a ton of correction. No institution is too important to ignore the laws of courtesy. If I could speak twenty languages, I would preach politeness in them all. I speak in praise of politeness out of an experience of fifty-nine years in the banking business."

I place courtesy and politeness in our business as one of the essentials to success, and close to it I would place tact, that peculiar diplomacy which many of us lack, and still I believe that the successful banker would be a successful diplomatist if he should enter the school of politics.

In the fourth place, I believe that the twentieth century banker will have some leisure to give to other things outside of his business. I am glad to notice the greater interest in playing golf. I do not play golf myself, and so I can more properly speak of it; but I admire it and I am glad to see the names of many bankers who indulge in the sport. It is wholesome, it is helpful, it is life-giving. My own recreation goes along a different line, but I believe every banker is entitled to a certain amount of leisure, and particularly country bankers. And we are all of us country bankers.

I know some of our larger communities are ambitious and we expect to become great cities, and I hope we all will be, but I think the twentieth century possibly will not see even Marietta as large as New York or Chicago or Philadelphia. It may be that some of the cities on this side of the river will be so large, but I take it that none of them will be. So we are all of us country bankers. We live near to nature, and we ought to draw from the fountain head of nature the inspiration and help so that when the toll of the day comes, we will be strong enough to meet it manfully and with a brave heart. We should be like the duke wandering in the forest of Arden, who found tongues in trees, books in the running brooks, sermons in stones and good in everything.

The world is getting better in spite of the banking pessimist, for I have heard it stated on the platform that bankers as a class were pessimists. But in spite of that statement, my experience is that bankers are the greatest optimists in the world. I am sure country bankers are, and I attribute it largely because of their mind to get near to nature. If we can get next to mother nature, we will draw from it that help and inspiration that will make us optimists.

Another point: The twentieth century banker must remember that he is more than a banker. I believe that a man who is worthy to be at the head of any bank in West Virginia should realize that he is not only the President of that particular institution, but that he has something more to do than to preside over its councils and endeavor to run its affairs. He should be a man of broad life. He should not only be a man of diligent business. You remember the saying of a certain wise man many years ago: "Seest thou a man diligent in business, he shall not stand before mean men; he shall stand before kings."

The banker who is worthy of the position will not stand before mean men. His position

is one of honor and prominence, responsibility and power, and he will stand up before the community, before the kings of the community, a man, every inch of him.

I adverted a few moments ago to the suggestion that some bankers were disposed to run their institutions as though they were philanthropic affairs. A bank, as I suggested, is established primarily for the benefit of its customers, and secondarily for the safeguard of deposits and the accommodation of business people in the matter of loans. It is established, in other words, for the making of business and the banker when behind his counter must not lose sight of this. He may be a man of deep sympathies, but the importance of questions devolving upon him at times makes it absolutely necessary for him to drown these sympathies for the time being.

BANKERS SHOULD BE IN TOUCH WITH THE PEOPLE.

He must temper his judgment with mercy, it is true, but while a bank is not a philanthropic institution, it does not necessarily follow that a banker may not be a philanthropist. In my opinion, brother bankers of West Virginia, every banker ought to be a philanthropist. A philanthropist is a lover of mankind. His position at the head of the institution should be used for the benefit of mankind. He must be broad-minded; he must be sympathetic; he must be quick to see opportunities to help, for the strong must bear the infirmities of the weak. It is a law that is just as certain as the ancient law of the Persians. The strong must bear the infirmities of the weak. If they will not bear the infirmities in one way, then they must in another.

The infirmities of the weak will tell upon the strong in the way of public hospitals, infirmaries, penitentiaries and all the multitudes of institutions of that character which are sustained by taxation. A banker should be broad-minded enough to see that the help he can extend as a friend of humanity, to the poor and the downtrodden will help to keep the poor and the downtrodden out of these asylums and penitentiaries. If he is not broad-minded enough to see this, he will find the taxes coming back heavier for him to pay. And so the banker should be a true philanthropist, building up in his community those various institutions that have to do for the well-being and uplifting of humanity—hospitals, if you please, churches, libraries—whatever in his judgment he sees will best serve the higher interests of his community. The responsibility rests upon him to help, and I believe that in the aggressive, onward, active interests of the twentieth century banker in the affairs of his institution, he will not neglect these broader interests outside. I believe also he should be interested to a certain degree in the politics of his State and in the civic affairs of his community. I do not mean by that that he should engage in the school, that he should attend the school, of politics, not by any means. But every banker intelligent enough to conduct a banking institution should be intelligent enough to have a comprehension, a broad comprehension, a wise comprehension, of all public affairs, and then act intelligently upon them.

And so, my friends, I have treated thus hastily of some of those features that I think should characterize the banker of this new century.

Banking is an honorable business. In its ranks to-day many of the best, purest minded, most successful business men are engaged. Many of the highest minded, purest Christian men are giving their time to conducting its affairs. Let us endeavor to make this business still more honorable and still more noble. Time was when the learned professions were considered to include only law, medicine and theology. But if we come up to the idea of the banker of the new century, it seems to me that we will have in the banking profession a profession that will be as honorable—it is to-day—but a profession calling for the most careful training and the highest type of culture, education and intelligence.

Officers for the ensuing year were chosen as follows: President, Robert L. Archer, Cashier West Virginia Savings Bank and Trust Co., Huntington; secretary and treasurer, C. T. Hiteshew, Assistant Cashier Farmers and Mechanics' National Bank, Parkersburg; vice-presidents: first districts, J. Lee Harne, Cashier First National Bank, New Martinsville; second district, Upton B. McCandlish, Cashier Davis National Bank, Piedmont; third district, Mason Matthews, Assistant Cashier Bank of Lewisburg; fourth district, I. O. Reynolds, Cashier Pleasants County Bank, St. Marys; fifth district, Edwin Mann, President First National Bank, Bluefields.

NOTICES OF NEW BOOKS.

[All books mentioned in the following notices will be supplied at the publishers' lowest rates on application to BRADFORD RHODES & CO., 87 Maiden Lane, New York.]

THE PRINCIPLES OF MONEY. By J. LAURENCE LAUGHLIN, Professor of Political Economy in the University of Chicago; author of "The History of Bimetallism in the United States," etc.; 8vo., pp. 550; price \$3. New York: Charles Scribner's Sons.

As the dictionary and cyclopædia are frequently consulted to confirm our impressions of a word or a fact, and the thermometer to assure us that the temperature is either high or low, so it is necessary to have a reliable standard to which appeal may be confidently made to resolve our doubts as to the correctness of some monetary hypothesis or the soundness of the conclusions drawn from a particular set of facts.

Of Professor Laughlin's qualifications for preparing a complete and thoroughly scientific treatise on money, there can be no question. He has long ranked high as an authority upon the subject, and is especially equipped for treating of the economic aspects of monetary problems, a knowledge of which is quite indispensable to a correct understanding of the principles involved. It is probable that a thorough comprehension of monetary science will never be widely diffused; only the specialist and the expert can in an ordinary lifetime become conversant with all its abstruse ramifications. This renders all the more valuable the work of a trained economist who has devoted years of inquiry and research to a consideration of the leading phases of the monetary problem, and who has carefully recorded the results of his investigations.

While Professor Laughlin has given us a treatise marked throughout by evidences of ripe scholarship, he has avoided technicalities as much as possible and has sought to convey his message in a form cognizable to the layman. In this endeavor he has succeeded better than most authors who have covered the field of monetary theory and history.

We can not review the work in detail, but must be content with a reference to its general excellence. It will become, unquestionably, one of the most authoritative treatises on the subject ever published in this country.

Professor Laughlin has considered extensively the various sub-divisions of his main theme, such as coinage, the functions of money, credit, the standard, the quantity theory of money, legal tender, etc. The investigation in relation to prices is especially full and will be found one of the valuable features of the work.

We have found the treatment of deposit currency particularly interesting and instructive, and can not forbear quoting, if only a fragment:

"The perfect elasticity of the deposit currency is its most valuable—as it is at the same time its least appreciated—characteristic. A vast amount of discussion and attention has been given to the establishment of an elastic bank-note system: the nineteenth century has put forth libraries of literature on the subject; and yet a medium of exchange based on commercial assets, and therefore perfectly elastic, is here with us, active, efficient, performing a mass of exchanges out of all proportion to the work of bank notes or any other form of money."

But neither quotation nor analysis can give an adequate indication of the scope and character of Professor Laughlin's work. It is an exposition of the principles of monetary science which every student of the subject should be eager to possess.

MONEY AND CREDIT. By WILBUR ALDRICH. New York: F. Tennyson Neely. Cloth, 12mo., pp. 187; price \$1.25.

Although not a pretentious volume, we have rarely found in so small a compass so much interesting and valuable information relating to money, credit and banking. A striking merit of the book is its terseness and the lucidity of the style. Most books that treat of money only add to the mystification of the subject, but Mr. Aldrich has written what he has to say so simply and clearly that it is easily within the comprehension of anyone, whether versed in monetary lore or not. For the average reader who desires to gain a fair knowledge of some of the underlying principles of banking and subjects allied thereto, "Money and Credit" will prove one of the best works thus far published.

Mr. Aldrich occasionally expresses very positive opinions, but as a rule they are sound enough; e. g., "Any ratio between gold and silver as fixed in coinage is really an attempt to fix their prices in terms of each other. If there is any fact plainly taught in history, it is that neither law nor custom can permanently fix the prices of any commodities in progressive communities." And again: "A check circulation based on bank deposits is the ideal rural circulation. It is necessarily handled carefully. It is elastic, created when wanted and retiring when no longer needed." But Mr. Aldrich does not think it possible for us to have an elastic bank-note currency in this country, at least under the present banking system. He says: "The elastic currency idea, as applied to bank notes, is just as fallacious and delusive as any other soft money notion that ever possessed the human mind." While many will regard this as a somewhat radical statement, others will agree with it. Mr. Aldrich shows unmistakably, however, that he realizes fully what is often obscured by agitators for currency reform—that the real currency of the country is composed of checks, drafts and the various forms of credit instruments arising from bank deposits.

TRUST FINANCE—A STUDY OF THE GENESIS, ORGANIZATION AND MANAGEMENT OF INDUSTRIAL COMBINATIONS. By EDWARD SHERWOOD MEADE, Ph. D., Wharton School of Finance and Economy, University of Pennsylvania. New York: D. Appleton & Co. 12mo., pp. 387; price \$1.25 (postage 12 cents).

Dr. Meade has traced the rise and growth of these vast aggregations of capital and has fully explained their financial methods. He shows plainly what a trust is, and how it is promoted and managed. It was highly desirable that a work of this kind should be issued at this time when the trusts are the theme of general discussion, and "Trust Finance" will afford a vast fund of trustworthy information on the topics of which it treats.

We note that Dr. Meade seems to regard over-capitalization as something much less reprehensible than it is commonly held in public estimation, and he does not hesitate to speak of "certain positive benefits which accrue from the practice popularly known as 'watering' securities" (page 304). Applying this generalization to a concrete case, however, it seems to fall to the ground. Commenting on the United States Steel Corporation, the author says (page 384): "The capitalization of the steel trust represents the top wave of prosperity. It is not difficult to forecast the value of that capitalization if the wave should recede."

Dr. Meade points out the great diversity in the corporation laws of the various States and the evils incident to the practice of forming laws so that the State shall receive a maximum of fees and the corporation be subjected to minimum restrictions. He regards national control of corporations essential to a reform in the corporation laws.

This latest addition to the admirable "Business Series" in course of publication by the Messrs. Appleton is a worthy companion of the volumes heretofore issued.

WISCONSIN'S NEW BANKING LAW.

Editor Bankers' Magazine:

SIR: Having read your magazine for some years I did not know but it might be of interest to your readers to have presented to them a synopsis of the banking law passed by the Wisconsin Legislature, and I have given herewith a brief outline of its main features.

The new law is a radical change from the old one, doing away entirely with the private bank and permitting no one to use the word bank in connection with any other business than that carried on under a State or National charter. Following is a synopsis of the law:

Heretofore Wisconsin laws have caused private banks (unincorporated) to be examined by and to make reports to the Bank Examiner of the State, but from the passage of the present law, May 18, 1908, private banks are given until September 1 to incorporate as State or National banks, or cease the banking business; the new law providing that "No person, copartnership or corporation engaged in the business of banking in this State, not subject to examination and the provisions of this act, shall make use of any sign, letter-head, or other blanks indicating that such banking business is transacted, and it shall be unlawful for any such person to use the word 'bank,' 'banking,' or 'banker' with any other business than that of banking as defined and authorized under the provisions of this act."

The capital required is not less than \$5,000 in towns and villages of less than 1,500 population; not less than \$10,000 in towns with from 1,500 to 3,500; not less than \$20,000 in cities having from 3,500 to 5,000 inhabitants; not less than \$30,000 in cities of from 5,000 to 10,000, and not less than \$50,000 in cities of more than 10,000 inhabitants, an exception being made of any incorporated State bank now in existence.

Reports to Examiner shall be not less than five per year, and at such dates as may be called for by the Bank Examiner.

Section 24 provides any bank may place its affairs and assets under the control of the Commissioner of Banking by posting notice on its front door: "This bank is in the hands of the Commissioner of Banking," and immediately on posting such notice all assets and property of such bank passes into possession of the Commissioner and acts as a bar to any attachment proceedings, and for each day the bank remains in the possession of the Commissioner he shall be paid ten dollars. This section is interpreted as a safety provision in case of an unexpected run on a bank, thus giving the officers time to convert securities into cash with which to meet the demands of depositors, the doors being opened at any time when the stockholders and the Commissioner desire to do so.

A reserve is required to be kept at all times, of fifteen per cent. of total deposits; such part of this sum as the directors may desire can be kept with other banks approved by the Examiner as "reserve banks," except that any bank designated as a "reserve bank" shall keep a reserve of twenty-five per cent. of its total deposits, either in cash or in banks, subject to approval by the Examiner.

The amount which may be borrowed by one firm is limited to thirty per cent. of the combined capital and surplus of the bank, with an exception made for bills of exchange and commercial paper actually owned by the borrowing firm, and a further provision that by a two-thirds vote of the directors the liabilities of a firm may be increased to a sum not exceeding the amount of capital and surplus of the bank upon approved securities.

Loans to officers, directors or employees are to be made only by vote of the directors, or upon satisfactory endorsement or security.

Loans upon real estate are confined to Wisconsin and adjoining States, and limited to an aggregate amount not in excess of fifty per cent. of the bank's capital, surplus and deposits.

Rediscounts are permitted, but the amount of collateral security given for money borrowed cannot be more than double the amount borrowed.

A surplus fund must be created by carrying to such fund not less than ten per cent. of the net earnings before any dividend may be declared, such surplus fund to be increased until it shall amount to twenty per cent. of the capital of the bank, at which point it must be maintained, or, in case of loss, reimbursed by taking half of the earnings for such period as may be necessary to reimburse it.

Bank circulation is provided for in case Congress shall hereafter remove the tax on such and sanction the issue of currency by State banks.

The liability of stockholders is limited to an amount equal to the face value of his stock.

The value of a bank's building is limited to twenty-five per cent. of its capital, excepting banks already doing business.

GEO. D. BARTLETT, *Cashier Citizens' State Bank.*

STANLEY, Wis.

AN OLD AND FAITHFUL BANK EMPLOYEE.

[Address made by William H. Parsons in the board room of the Bowery Savings Bank, New York city, May 11, 1903, in presenting, on behalf of the trustees, a gold watch and chain to Henry Brushaber, in recognition of his connection with the bank for fifty years.]

MR. HENRY BRUSHABER: The honor of representing my fellow trustees has been conferred upon me, I assume, because I am, with the exception of the President, the longest in office of any one of the trustees now present.

In 1852 you entered the service of the Bowery Savings Bank, and, as I am informed, a lad of fifteen years of age. Fifty-one years of continued service in an institution in this city or in this great country of ours, demands recognition, and it has seemed to me that it might add to the interest, and possibly profit, of this occasion, if I should briefly recite some facts in the history of this bank.

It was chartered May 1, 1834, and the first meeting of the trustees was held at the Butchers and Drovers' Bank, on the 8th of May, at which Mr. Benjamin M. Brown was elected President.

On the 2d of June of the same year, the bank commenced active business, and received on the opening day, from fifty depositors, the sum of \$2,020.00, and during the first month of its existence, \$15,596.00. It was open a portion of each day; the services rendered by the officers were largely gratuitous, and the staff of employees included three clerks. During the first year of the bank's existence 531 accounts were opened, and the amount paid as interest to depositors for that year was \$2,190.86. The management was and always has been conservative, and yet, year by year, there was steady growth, its influence widened, its depositors increased in numbers and in amount.

The bank was located in a three-story and attic dwelling house at 128 Bowery, being a portion of our present site. It occupied the first floor only, and, if I am not mistaken, Mr. Giles H. Coggeshall, of honored memory and spotless integrity, who served as secretary for about forty-nine years, occupied the premises over it as a dwelling; but, whether I am correct or not in this statement, it is true that for several years after he became Secretary the chest which is now placed upon the President's table as a relic of the past, contained all of the valuable securities of the bank, including the cash. This statement he made to me himself, and with a good deal of pride added, that not one penny of the assets of the bank had ever been lost or unaccounted for during this period.

You have served under eight of the ten Presidents, under three Secretaries, one of whom is now living. During your connection with the bank there have been one hundred and nineteen trustees, twenty-three of whom have resigned; the balance are either serving the bank to-day or their position as trustee has been vacated by reason of their death. Of these trustees the longest in service is our respected ex-President, Mr. John D. Hicks, who was elected more than forty-five years ago. The next longest in service is President William H. S. Wood, who has been a trustee for about thirty-one years.

In 1843 the deposits amounted to \$537,222.00. Ten years later, and one year after your connection with the bank, the deposits were \$3,020,161.00.

In 1868 over \$6,500,000.00; in 1873 more than \$29,000,000.00; in 1883 over \$41,000,000.00, and in 1903 within a few dollars of \$83,000,000.00. The total amount of dividends or interest paid to the depositors since the bank commenced business, inclusive of the amount paid or declared January 1, 1903, has been \$68,092,637.30.

The growth of the Bowery Savings Bank is a forcible illustration of the adage, "Big oaks from little acorns grow;" the acorn was small, the oak has reached magnificent proportions, yet retains the vigor of youth.

I have been influenced in giving these details, in order that we all may realize the character of the institution with which you have been connected and identified. During this period of fifty-one years, under the administration of the several officers, and the large number who have served as trustees, it must be a gratification to you to know that in the estimation of all your record is that of an honorable, faithful and conscientious employee. There is no intimation, suggestion or breath of suspicion indicating that you have ever been derelict or slothful in the performance of your duty, or that the interests of this bank were not your first consideration. On the contrary, your record has been a most commendable one. You have been trusted, and you have not been found unworthy of the trust imposed in you.

In youth, in mature and advanced years, you have given to this bank the best you had, respected alike by officers, trustees, and last, but not least, by your fellow employees. This is a record of which you may be justly proud.

The members of the board of trustees desire that there should be recognition of such faithful service, and they have deputed me to present to you this testimonial of their respect, which they hope you will receive, and that the acceptance of it will give you as much pleasure as the giving of it has been to those who have contributed to its cost, and here let me say that this is not a gift of the bank, for we have no right to use the money which is intrusted to our care for such purposes. It is a gift from the individual members of the board of trustees, and I have no hesitation in saying that if the opportunity had been given to your fellow employees many of them would have availed themselves of the privilege by adding to the fund.

Allow me to express to you on behalf of the officers, on behalf of the trustees and of your fellow employees, the hope and wish that your life may be long spared, and whether or not advancing years and the state of your health will permit you to be as actively employed in the bank in the future as you have been in the past, we bespeak for it the same interest during the remaining years of your life as you have manifested during your active service as an employee, and I am quite sure the officers and the trustees of this bank will continue to manifest their interest in your welfare.

May I not, without impropriety or impiety, apply to you a commendation recorded in the Holy Scriptures, "Well done, good and faithful servant."

Opposed to Asset Currency.

Editor Bankers' Magazine:

SIR: With much trouble and study the undersigned had prepared an article to send to you upon "asset currency," and now cheerfully destroys it after reading your able editorial upon the same subject in your June number. You are entitled to the thanks of all the bankers for your argument against the plan.

The eminent men who favor the scheme have stipulated for "reasonable limitation of volume and proper redemption" but they forget that they are trying to cancel absolute limitation and to substitute therefor some elastic barriers (cobwebs for protection and bulwarks against happiness) which will be greatly stretched or broken in times of emergency by pushing politicians.

Given the change in the law, and Mr. Bryan could enlarge Mr. Fowler's limit to suit the times; we would have more and more paper and less and less gold as wages went down.

Permit me to suggest that bankers shall consider two instruments of exchange which were used quite effectively in the panic of 1893—small checks and rediscounts. One restraint upon the free use of small checks could be removed by a stipulation upon deposit slips to the effect that the depositing of a check in a bank, it being payable at the same bank, would not operate as a payment until after that bank had written up its books the same day.

Perhaps cases occur where a bank has loaned to another bank without security and declines to make a second but secured loan to the same borrower because the new collateral cannot be held to cover the pre-existing debt—thus forcing the borrower to pay all and start afresh elsewhere.

If a depositor demands his balance of \$5,000 and the banker endorses and delivers to him a good note of some merchant for \$5,000, can the depositor hold this rediscount in case the bank goes into the hands of a Receiver?

Are these vital questions of law? If they are, then a little improvement in the law points might be more valuable in the aggregate than the so-called "elastic currency."

SACRAMENTO, Cal., June 15.

FRANK MILLER.

Bank Notes Versus Checks.

LONDON, June 30.—"The Times" to-day refers to the address made by Comptroller of the Currency Ridgely at the Georgia Bankers' Convention, wherein Mr. Ridgely said: "Bank notes are the best possible form of currency for the business of a community if made properly elastic and responsive to demand."

"The Times" says this is true enough if the special position of the United States is above consideration, but as a general proposition it is far from true. The use of bank notes, the article continues, is at best a clumsy way of doing business compared with the system of checks existing in England.—*New York Times*.

CONDITION OF THE NATIONAL BANKS.

Abstract of reports of condition of National banks in the United States on February 6, April 9 and June 9, 1903. Total number of banks: April 9, 1903, 4,845; Feb. 6, 1903, 4,766; June 9, 1903, 4,989.

RESOURCES.	Feb. 6, 1903.	April 9, 1903.	June 9, 1903.
Loans and discounts.....	\$3,350,897,744	\$3,408,217,618	\$3,415,045,751

BANKING AND FINANCIAL NEWS.

This department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—The Irving National Bank has moved into its new quarters in the Irving building at Chambers and Hudson streets.

—On June 24 the directors of the Oriental Bank declared a dividend of five per cent., payable July 1. This is the one-hundredth consecutive semi-annual dividend declared by the bank. The capital stock has been increased by \$150,000, making the total capital \$750,000, and surplus over \$1,000,000.

—At a meeting of the directors of the Seaboard National Bank June 25 C. C. Thompson, Cashier of the bank, was elected a director, and John H. Davis, for many years loan and discount clerk, was elected an Assistant Cashier.

—Negotiations have been practically completed for the merger of the Western National Bank of the United States and the National Bank of Commerce in New York. The substance of the plan is as follows: The board of directors of the National Bank of Commerce in New York, with a view to effecting a merger and consolidation of the Western National Bank of the United States in New York and the National Bank of Commerce in New York, has called a meeting of the shareholders of the Bank of Commerce to authorize the increase of the capital stock of that bank from \$10,000,000 to \$25,000,000, and the use of \$12,500,000 of such increase of \$15,000,000 of capital stock, to acquire the assets and business of the Western National Bank of the United States in New York in such manner as in effect to provide for the exchange of such additional \$12,500,000 of capital stock share for share for the capital stock of the Western National Bank of the United States in New York, provided, however, that this bank shall increase its capital stock to \$12,500,000, and that its net assets shall be approximately equal to \$5,000,000 over and above such increased capital stock.

After the merger is effected the institution will be conducted under the name of the National Bank of Commerce, and its capital will be \$25,000,000 and surplus \$10,000,000.

The Bank of Commerce was organized Jan. 1, 1839, with an authorized capital of \$5,000,000, all of which was duly subscribed. The original articles authorized a subsequent increase in the capital of \$20,000,000—in other words, to \$25,000,000, the current figure—and permitted additional subscriptions beyond this amount "by or on behalf of the United States of America or on behalf of any or either of the separate States," indicating an expectation of the original subscribers that the bank would become an institution of great capital and influence.

The bank became a National institution in 1865, a clause having been introduced into the National Bank Act to fit its case. It was granted a perpetual charter and its directors were made self-perpetuating—that is to say, they elect their successors, the stockholders having no vote for directors; but the stockholders are not liable for double the amount of their stock, as are other banks. The capital was at that time increased to \$10,000,000 and the surplus to \$2,000,000. In 1877 the directors were authorized to take necessary steps to reduce the capital to \$5,000,000, as a result of the excessive and discriminating taxation "levied upon the banks of New York, resulting in injurious competition with them on the part of foreign corporations, and rendering it difficult, if not impossible, for the New York city banks, especially those of large capital, to earn even reasonable dividends for their stockholders."

The Western National Bank was organized in 1887, with former Secretary of the Treasury Daniel Manning as President and Conrad N. Jordan Cashier. Mr. Jordan subsequently became President. In 1897 the United States National Bank was absorbed, and John E. Searles, Jr., became President. The vigorous life of the bank may, however, be said to have commenced when the present President, Valentine P. Snyder, and the present Vice-President, Henry A. Smith, took hold. In December last the capital was increased to \$10,000,000, and arrangements were made to take over the National Bank of the United States (a new name for the Hide and Leather Bank); and the Western National Bank has now a surplus of \$3,267,534 and deposits of \$77,849,962.

—At the annual business dinner and meeting of the Board of Consuls of New York Chapter, American Institute of Bank Clerks, held at Union Square Hotel, Thursday evening, June 18, M. Bauer was elected president and J. C. Martine vice-president; J. F. Flaacke and Robert Hockey being re-elected to the offices of treasurer and secretary respectively. C. C. Dickson was also chosen chief consul and N. D. Alling as consular secretary.

The appreciation of the members present was tendered to S. Ludlow, Jr., the retiring president, for his devotion to the interests of the chapter, and there was a general discussion with a view to the improvement and extension of the educational and social features of the institute work in New York.

—Lewis V. F. Randolph, former President of the Atlantic Trust Company, was recently elected President of the Consolidated Exchange.

—Charles F. Broach, Secretary of the Fidelity Title and Trust Co., Stamford, Conn., was recently chosen Cashier and director of the Equitable National Bank; Chas. A. Nones, treasurer of the Evansville and Terre Haute Railroad Co., was also elected President and a director of the bank. The capital is to be increased from \$200,000 to \$500,000.

—The directors of the Fifth Avenue Bank have, in addition to the regular quarterly dividend of twenty-five per cent., declared a special dividend of 100 per cent. on the \$100,000 capital stock of the bank. The earnings for 1900, 1901 and 1902 were extraordinarily large. The stock sells for close to \$4,000 a share, the last quotation for it being \$3,725 bid, \$4,000 asked.

—On June 17 Charles A. Peabody was elected a director of the National Bank of Commerce, to succeed the late Samuel Babcock.

—Henry W. Gennerloh, President of the United National Bank, resigned that office at a meeting of the directors June 18.

—A special meeting of the shareholders of the Trust Company of the Republic was held June 27, and the capital reduced from \$1,000,000 to \$500,000. It is proposed to apply the reduction of the capital to meet losses incurred, the balance remaining to be turned into surplus account.

—Fred J. Reynolds, Vice-President of the First National Bank, Toledo, Ohio, was a recent guest at the Waldorf-Astoria. This bank is an exceedingly strong institution, having \$500,000 capital and about \$900,000 surplus and profits.

In addition to his prominent identification with banking Mr. Reynolds is interested in a number of other large and successful corporations of which he is either an officer or director. He is energetic in all his undertakings, and the remarkable prosperity of the various enterprises with which he is identified are evidences of his sound business judgment.

—The removal of the banking house of N. W. Harris & Co. to its permanent offices at the northwest corner of Pine and William streets was celebrated on the evening of June 6 by a dinner at Delmonico's. Covers were laid for fifty. Allen B. Forbes, resident partner at the New York office, was toastmaster, and the guests of honor were N. W. Harris, of Chicago, founder of the house, and Isaac Sprague, resident partner of the Boston office. Other partners present were E. E. Black, G. W. Harris and J. W. Edmiston, all of the Chicago office.

NEW ENGLAND STATES.

Boston.—At a meeting of the board of directors of the National Exchange Bank, Boston, held June 15, W. R. Mitchell was appointed an Assistant Cashier of the bank.

—The Massachusetts National Bank, which is among the oldest banks in the country, having been incorporated in 1784, will be merged with the First National Bank.

—Governor Bates in his message vetoing the bill to modify the law of last year, requiring the separation of National and Savings banks, sets forth that the provision of last year's law, requiring the separation of such banks, "was neither hasty nor ill-considered legislation, but was the result of a demand that had been growing for years for a complete separation of banking institutions. This law was placed on the statute books after long agitation, and after it had been recommended for over a period of fifteen years by the Savings Banks Commissioners and its necessity demonstrated by experience."

—The Boston National Bank Cashiers' Association has elected the following officers for the ensuing year: President, Charles H. Ramsay, Cashier Winthrop National Bank; vice-president, Joseph H. Foster, Cashier Atlas National Bank; secretary, Henry F. Smith, Cashier National Shawmut Bank; treasurer, Samuel A. Merrill, Cashier Mechanics' National Bank.

Executive committee: Frederick H. Curtis, Cashier Massachusetts National Bank; Arthur P. Stone, Assistant Cashier National Shawmut Bank, and William F. Edlefson, Cashier Elliot National Bank.

—Directors of the Old Colony Trust Co. have been authorized to issue \$500,000 of new stock.

—A controlling interest in the Mount Vernon National Bank has been acquired by Otis, Wilson & Co., of Chicago.

To Supervise Trust Companies.—The Connecticut General Assembly has passed a bill vesting in the Bank Commissioners supervision over trust companies. The commissioners are directed to make examinations into each department of every trust company of the State. All the reports which trust companies now make to the Insurance Commissioner will, under the new law, be made to the Bank Commissioners, and all the duties imposed by the general statutes upon the Insurance Department with reference to trust companies are transferred to the office of the Bank Commissioners.

Maine Banking Institutions.—On April 25 the fifty-one Savings banks of Maine reported deposits of \$74,509,110, compared with \$73,102,324 on October 25, 1902. In the same time the resources have increased from \$77,853,815 to \$79,673,069. The resources of the trust and banking companies on April 25 were \$17,450,050, a slight increase compared with the figures for October 25, 1902.

Portland, Me.—The Maine Savings Bank, organized in 1859, has had a very substantial and steady growth. Its deposits now amount to \$9,274,000; reserve fund, \$427,500; undivided profits, \$474,041; interest, \$154,958; total number of depositors, 24,909.

The officers and directors at the present time are: President, Eben Corey; Secretary and Treasurer, Alpheus G. Rogers. Trustees: Eben Corey, Charles O. Bancroft, Leander W. Fobes and Alpheus G. Rogers, all of whom have been in full charge, substantially, for many years.

About the first of last December the bank moved into its new fire-proof building. This structure is thoroughly modern and is equipped with the latest and best devices for insuring safety and convenience.

Providence, R. I.—The City Savings Bank has effected an arrangement by which its accounts will be taken over by the Old National Bank, a savings department of the latter institution issuing pass books to the depositors in the City Savings Bank in exchange for the pass books they held when the merger was consummated. The City Savings Bank, under this plan, will go out of business as a separate institution. Its depositors in making the transfer of accounts will not lose any interest.

MIDDLE STATES.

Philadelphia—At a stated meeting of the board of directors of the Union National Bank, June 28, W. H. Carpenter was elected Vice-President. Mr. Carpenter still retains the office of Cashier.

—The Philadelphia National banks and the trust companies hold more than \$505,000,000 deposits, the largest sum on record; and they have a surplus of \$75,294,000. The loans are above \$261,000,000.

There are eight National banks having deposits ranging from \$11,000,000 to \$36,000,000, and the net profits of most of them were very handsome. The largest bank—the Fourth Street—earned \$567,959 on its \$3,000,000 capital stock, or about eighteen and one-half per cent.

The combined capital stock of the thirty-one National banks is \$21,225,000. The Girard and the Farmers and Mechanics' each has \$2,000,000. The Girard's profits for the year were \$404,876, or a little better than twenty per cent. The Central National earned more than thirty per cent., its capital being relatively small—\$750,000.

—William W. Price, manager of the collateral loan department of the Merchants' National Bank, has been elected Cashier of the Kensington National Bank, and entered upon the duties of the new position July 1. Mr. Price has been at the Merchants' since December, 1897. Previous to that time he was paying teller and Acting Cashier of the Chestnut Street Bank, and before that time was with the Philadelphia National. He succeeds to the position made vacant by the death of Henry McConnell.

—Redmond, Kerr & Co. succeed Graham, Kerr & Co., dissolved.

Pittsburg.—Banking matters in this city are undergoing important changes in the direction of the consolidation of a number of large institutions. The banks and companies lately reported as being likely to merge include the following: Farmers' Deposit National Bank, Colonial Trust Co., American Trust Co., Pennsylvania Trust Co., Columbia National Bank, Tradesmen's National Bank, Colonial National Bank, Germania Savings Bank, Freehold Bank, and the Reliance Life Insurance Co. Their combined capital is \$7,650,000; surplus and profits, \$14,062,870; deposits, \$47,294,587, and total resources, \$73,765,112.

Details of the consolidation plan have not been made public; but it is expected that the

Farmers' Deposit National, which is reported to have secured control of the banks and companies named, will place some of them in liquidation—in other words, will absorb them.

—**R. J. Stoney, Jr.**, has compiled a statement showing the remarkable growth of banking in this city in the past year. The ninety National and State banks and trust companies have total resources exceeding \$411,000,000, an increase of nearly \$68,500,000 in the past twelve months.

—Control of the **First National Bank**, of Allegheny, has been acquired by the **Federal National Bank**, of Pittsburg. There is to be no merger, but both banks will be continued, their relations being closely affiliated.

—The capital stock of the **Safe Deposit and Trust Co.** will be increased from \$2,000,000 to \$3,000,000.

—A twenty-story bank and office building will be put up by the **Diamond National Bank**.

Buffalo, N. Y.—**Eben O. McNair** and others have incorporated the **Commonwealth Trust Co.** with \$500,000 capital.

SOUTHERN STATES.

Nashville, Tenn.—On June 9 the National banks of this city reported total resources amounting to \$12,507,266, compared with \$10,203,997 on July 15, 1902.

Richmond, Va.—On account of the steadily increasing business of the **American National Bank**, the directors and stockholders decided to increase the capital stock from \$300,000 to \$400,000, and at a recent meeting of the stockholders they authorized the directors to sell the \$100,000 additional stock at \$125 per share, which will make the surplus \$100,000. The entire amount of the new stock was immediately taken by present stockholders, which is excellent evidence of the popularity of this successful bank.

Lenoir, N. C.—On May 21 the Bank of Lenoir issued the following circular letter:

"Gentlemen: This bank, which has been a private bank since beginning business January 1, 1894, has recently taken out letters of incorporation in compliance with the terms of an act of the recent State Legislature requiring all private banks to incorporate. There being at this time neither the necessity for increasing our capital, nor the desire on the part of the management to evade their former personal liability, this bank has had incorporated into its recently granted charter the following section, which is self-explanatory:

'Sec. 8. For the ample protection of depositors, the stockholders of this corporation, each for himself or herself, voluntarily assume a liability for all obligations of said bank bank equal to ten (10) times the par value of the shares of its capital stock which they respectively hold.'

The bank's present capital is \$10,000; undivided profits, \$15,000; deposits, \$110,000, and loans, \$100,000."

WESTERN STATES.

Chicago.—Tuesday, June 16, closed the first year's business of the **National Bank of North America**, Chicago.

The deposits of the bank at the close of the first day's business amounted to \$3,244,367.51. At the close of business June 16, just one year from the date of opening, the deposits were \$11,721,901.03.

The undivided profits at the close of business June 16, 1903, amounted to \$133,617.49, which represents the net earnings of the bank after paying all expenses of organization and operating expenses of every kind, and after writing off \$16,778 on account of furniture and fixtures and premium on United States bonds. No dividends have as yet been paid, and the policy of the bank will be to carry to undivided profit account the earnings for the first eighteen months of its existence, beginning with January 1, 1904, to accumulate the earnings for dividend purposes.

The total assets of the bank at this time amount to \$14,855,418.52.

—Stockholders of the **Western State Bank** voted on June 18 to increase the capital from \$500,000 to \$1,000,000, and also voted to change the title to the **Western Trust and Savings Bank**, and to absorb the business of **Otis, Wilson & Co.**

—**Wm. Wallace Hill**, formerly Secretary of the **Continental National Bank**, has been appointed Western representative for **Redmond, Kerr & Co.**

Waterloo, Iowa.—The capital of the **Leavitt & Johnson National Bank** will be increased from \$100,000 to \$200,000, the new shares to be sold at a price which, with the present surplus will bring the surplus account up to \$50,000. This enlargement of the capital is made necessary by the large growth in the bank's business. This institution has a successful history, extending over a period of forty-seven years.

Terre Haute, Ind.—The Terre Haute Trust Company is having a very satisfactory growth, its savings deposits having increased from \$12,948 on March 31, 1901, to \$300,000 on May 30, 1903. Net profits for the year were \$5,525 in excess of those for the previous year.

Officers of the company are: President, I. H. C. Royse; Vice-President, John Cook; Secretary, F. C. White; Assistant Secretary, C. M. Connelly. The report of the company for May 31 shows assets amounting to \$576,549.

Minnesota—Maturity of Commercial Paper.—The following law was passed at the recent session of the Minnesota Legislature:

"An act abolishing days of grace and fixing the maturity of negotiable instruments and other evidences of indebtedness.

Be it enacted by the Legislature of the State of Minnesota:

Section 1. No promissory note, draft, 'not drawn at sight,' check, acceptance, bill of exchange or other evidence of indebtedness, shall be entitled to days of grace, but the same shall be payable at the time fixed therein without grace.

Sec. 2. All promissory notes, drafts, checks, acceptances, bills of exchange, or other evidences of indebtedness, falling due or maturing on Sunday or on any legal holiday, shall be deemed due or maturing on the succeeding business day; and when two or more of these days come together, or immediately succeed each other, then such instrument, paper or indebtedness shall be deemed as due or maturing on the day following the last of such days.

Sec. 3. All acts and parts of acts inconsistent herewith are hereby repealed.

Sec. 4. This act shall take effect and be in force from and after June 30, 1903."

Indianapolis, Ind.—The American National Bank, which opened for business on February 4, 1901, reported total deposits \$5,302,216 on June 9 last.

There has been an increase of \$1,221,834 in the bank's resources since April 9.

Cleveland, Ohio.—The consolidation of the Euclid Avenue National Bank and the Park National Bank is announced, the new bank to operate under the name of the Euclid-Park National Bank, with a capital of \$1,500,000, surplus \$500,000.

PACIFIC SLOPE.

Seattle, Wash.—The directors of the Seattle National Bank and the Boston National Bank have voted to consolidate their interests and to form a new institution, with a capital and a surplus of \$400,000, taking the name of the Seattle National Bank. The combined deposits of the two banks, according to their last statement, aggregate \$3,397,000.

Portland, Ore.—Deposits of the National banks of this city on June 9, were \$12,895,929, compared with \$10,517,941 on April 30, 1902.

San Francisco.—At a meeting of the shareholders of the Western National Bank, June 3, it was unanimously voted to increase the capital stock from \$200,000 to \$500,000.

Failures, Suspensions and Liquidations.

Alabama.—On June 11 the Bessemer Savings Bank and the Bank of Commerce, Bessemer, were placed in the hands of Receivers. The President of the Bessemer Savings Bank, T. J. Cornwell, is reported missing, and he is said to have lost a large amount in speculation. The Bank of Commerce is reported to have closed to avoid a sympathetic run and the sacrifice of its assets.

Indiana.—The Citizens' Bank, of Milton, closed June 25, and E. E. Kessler, the managing officer, is said to have disappeared. Depositors will probably lose heavily.

Maryland—BALTIMORE.—The City Trust and Banking Co. closed June 7 and was placed in charge of Receivers. Liabilities are placed at about \$500,000. This company did a commercial and Savings bank business and general warehousing. It was reorganized a few months ago.

Minnesota—ST. PAUL.—At a meeting of the stockholders of the St. Paul Title and Trust Co., June 2, it was decided to place the company in liquidation. The statement of the company showed a surplus of \$65,000 and \$7,000 cash on hand, and it is expected that the assets will be sufficient to meet the \$250,000 of capital stock. Business has not been profitable of late and the stockholders concluded to place the company in liquidation.

Missouri.—The Skidmore Bank, of Skidmore, made an assignment June 9.

New York.—W. J. Shults & Co.'s bank at Cohocton, suspended June 24.

Oklahoma.—Recently the Bank Commissioner closed the banks at Indianoma, Sterling and Hollis, of which R. R. Connella was President.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NATIONAL BANK RETURNS—RESERVE CITIES.

By the courtesy of the Comptroller of the Currency at Washington, the **BANKERS' MAGAZINE** has been favored with the complete returns of the National banks in all the reserve cities, at the date of the call on June 9, 1903. These are published below in conjunction with the two preceding statements of February 6, 1903, and April 9, 1903. In this form the figures become much more valuable by reason of the comparison. The complete returns of National banks in the reserve cities are published in the **BANKERS' MAGAZINE** exclusively.

NEW YORK CITY.

MONEY. TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, July 1, 1908.

A SHARP DECLINE IN THE PRICE OF SECURITIES and an extraordinary rise in the price of cotton were important features of the month just closed. As regards the latter, there is little to be said more than that speculative interests have been operating a "corner," and the advance to more than thirteen cents per pound is considered neither legitimate nor yet beneficial to either producers or manufacturers of cotton. In fact, owing to the high price of cotton, mills have been shutting down rather than manufacture at a loss. The general influence of the cotton "corner" has been anything but favorable upon other markets.

The weather has been an irrepressible factor for several weeks past. First there was a drought of long duration and wide extent. More recently we have had floods which have caused much destruction, and which also have, with the continuous rains which accompanied them, put a portion of our growing crops in doubt. The unseasonable weather in June has unfavorably affected retail business of all kinds, and this is apt to have considerable influence.

The labor question has been more or less prominent throughout the month. At first it looked as though there might be another strike among the anthracite coal workers, but that has happily been averted. The strikes in the building trades in New York, however, are still unsettled, and thousands of workmen are in idleness, while millions of dollars of capital are earning nothing because of the failure of capital and labor to come to an agreement.

More intimately related to the financial situation has been the litigation concerning the United States Shipbuilding Company, which has resulted in the appointment by Judge Andrew Kirkpatrick in the United States Court at Newark, N. J., of a receiver for the company. The controversy before the court developed the fact that the capitalization was largely in excess of the value of the property. In fact, the proposed plan of reorganization, which caused the application for a receiver, provided for reducing the total stock and bond issues from \$69,500,000 to \$48,000,000. The fact that a company organized with so large a capital only about a year ago, on June 17, 1902, and with which very prominent names in the business and financial world were connected, should be alleged to be insolvent, was viewed as very unfortunate. It was not until the last day of the month that the Judge decided to appoint a receiver, and the effect of that is yet to be disclosed.

The change which has taken place in Wall Street has rarely been paralleled in the history of that place of revulsions and revolutions. From transactions of 1,000,000 and even up to 3,000,000 shares a day, the business of the New York Stock Exchange fell to about 200,000 shares. Six years ago it was not unusual for a day's sales to amount to less than 200,000 shares, and there were days when a total of 100,000 shares was not recorded; but the wonderful records made since those days cause the present dullness to seem unprecedented.

Opinions are at wide variance as to the causes of the present stagnation and as to its probable continuance. The professional operators on either side of the market have reasons to give which are as conflicting as their own interests. Impartial observers who at first were inclined to think that only bears had sold stocks and that

they had sold themselves "into a hole," have either changed their views or decided to quit predicting. The smash in prices which occurred on June 10 has not been followed by the buying movement which was anticipated. Nor does there appear to be any present indication of a disposition to pick up the many "bargains" that have been created by the recent decline.

The very dullness of the stock market, taken in connection with the very severe decrease in values which has occurred, suggests that many people who were formerly buying stocks have been hurt or scared so badly that they are either not able or willing to buy now. There must have been tremendous losses on the long side in the last few months. People who bought stock, say in the spring of last year, and held on until June this year, have seen a severe depreciation in their investments. Few stocks show a smaller decline than ten per cent., while a very large number show losses of twenty per cent. and over. The extent of the decline is suggested in the following partial list of stocks which have experienced the heaviest fall. The table shows the total decline, comparing the lower prices of last month with the highest prices this year and last year:

	Decline from highest price in			Decline from highest price in

There has been more or less of late a feeling that, in the matter of new issues of securities, there has been an over-indulgence. That there has been too much of creating capital out of nothing, and while there has been not only a failure to "digest" new issues, there is also a lack of nutrition in many issues, both digested and undigested. As this opinion gained recognition, it was only natural that securities of recognized merit should pass under a cloud. A case in point is the new issue of \$75,000,000 of Pennsylvania Railroad stock. The entire issue was subscribed for last month, and the underwriting syndicate, it is understood, will not have to take any of the stock. Yet concerning this issue there is some interesting financial history.

Last January, when financial skies seemed cloudless and there appeared to be no limit to the resources or confidence of investors, it was announced that the Pennsylvania Railroad would issue \$200,000,000 of new stock from time to time. When this news came out the stock was quoted at 157. In May the price had fallen to 125. It was decided to issue \$75,000,000, and a syndicate of bankers agreed to underwrite the issue at 120, receiving as a commission 2½ per cent. The company will, therefore, realize \$90,000,000 in cash less \$2,500,000 paid to the syndicate.

Only a short time prior to the subscriptions being received the stock was quoted in the market at 123. It was a question whether the stock could be sold, yet the issue was an unqualified success, and was the one strongly favorable influence which improved the financial situation at the end of the month.

It was also announced on the last day of the month that the extension of \$21,-500,000 of Chicago, Burlington and Quincy bonds, maturing on July 1 had been successfully accomplished, and the syndicate which had underwritten that operation would not be called upon to make any payment.

The railroads are still in the enjoyment of an exceptional prosperity, although the gains in earnings and profits cannot be expected to increase as in the last few years. The Interstate Commerce Commission in the report for the year ended June 30, 1902, shows that the gross earnings from the operation of the railways in the United States, embracing 200,154 miles, were \$1,726,380,267, an increase of \$137,-854,290 over those of the previous year. The net earnings, after deducting operating expenses, were \$610,131,520 an increase of \$52,002,753. The amount of dividends declared during the year was \$185,391,655 as compared with \$156,735,784 in the previous year, an increase of nearly \$29,000,000. These are very substantial gains, but the year just closed will hardly equal them, at least as far as profits are concerned.

So great has been the increase in cost of operation caused by higher wages for labor and higher prices for materials that in many cases all the increase in gross earnings has been swallowed up in increased expenditures. The Atchison Railroad reports an increase of more than \$3,000,000 in gross earnings from July 1 to May 31, and a decrease of nearly \$700,000 in net earnings. The Southern Pacific from July 1 to April 30 gained gross nearly \$2,800,000, and lost in net earnings \$2,000,000. The Southern Railway gained \$3,700,000 gross and only \$335,000 net. The Union Pacific gained nearly \$2,500,000 gross and less than \$150,000 net.

The New York Central has just published its earnings for the first half of the current calendar year, those for June being partly estimated, and they show in a striking manner how increased expenses are affecting net earnings. We show first the gross and net earnings of the Lake Shore and the Michigan Central roads for the first half of each of the last five years:

JANUARY 1 TO JUNE 30.	LAKE SHORE.		MICHIGAN CENTRAL.	
	Gross.	Net.	Gross.	Net.
1899.....	\$11,005,132	\$3,440,949	\$7,154,000	\$1,762,000
1900.....	12,728,383	4,624,730	8,208,605	1,749,520
1901.....	13,660,219	4,754,422	8,815,867	1,777,905
1902.....	14,254,140	4,403,729	9,049,574	1,880,326
1903.....	16,878,000	3,897,000	10,729,000	1,821,000

In the case of both these roads, while the gross earnings have increased considerably, the net earnings are smaller than they were last year. Compared with 1899 Lake Shore gained \$5,800,000 gross and only about \$400,000 net and Michigan Central \$3,500,000 gross and only \$60,000 net.

For the New York Central we have the figures for the full year ended June 30, with partial estimates for June. The gross and net earnings and surplus for dividends yearly since 1899 were:

YEAR ENDED JUNE 30.	Gross Earnings	Net Earnings.	Surplus.
1899.....	\$48,124,016	\$17,952,859	\$5,687,875
1900.....	54,582,951	20,511,306	7,977,097
1901.....	66,393,111	23,744,894	7,742,188
1902.....	70,903,868	24,040,379	8,018,717
1903.....	77,538,100	24,187,800	8,714,000

Here a gain of \$6,600,000 in gross earnings over the previous year is shown and a gain in the net earnings of only \$117,000, while the increase in profits is only about \$700,000. The New York Central is not alone in showing such a state of affairs, many other roads finding that they are getting only a small share of the results of prosperity.

There are many evidences that the era of prosperity through which the country has been passing has not yet come to an end, and they give hope that there is still a measure of prosperity yet to be enjoyed. Investors are in many cases receiving large returns in the way of dividends and interest. The "Journal of Commerce" of this city estimates that \$136,800,000 will be disbursed for July payments on stocks and bonds in New York. This represents only the payments of the principal corporations and institutions. They are classified and compared with January, 1903, and July, 1902, as follows:

DIVIDEND PAYMENTS ON STOCKS.

	July, 1903.	January, 1903.	July, 1902.

While the disbursements in July will undoubtedly largely exceed those of the same month in any previous year, the fact is not to be ignored that there has been a very large increase in the capital issues of the corporations, particularly industrial concerns. The "Journal of Commerce" says: "The absence of a larger increase in the amount of dividends on industrial stocks is more significant than the actual increase itself."

The general conditions which make for prosperity are as a rule still favorable. The report of the Government on the condition of the growing crops on July 1, will be awaited with considerable interest because of the weather conditions which prevailed in June. The report for June 1 was very encouraging, and upon it were based estimates of a yield of 483,000,000 bushels of winter wheat and 298,000,000 bushels of spring wheat, making a total of 781,000,000 bushels. This would mean an increase of 111,000,000 bushels over the yield of 1902 and of 83,000,000,000 bushels over the crop of 1901, the largest ever harvested. A large demand for our wheat abroad is practically assured and therein lies a very strong element of prosperity.

The iron trade is still recognized as the barometer of the general business situation, and there have been rumors of a general lowering of prices. Representatives of the United States Steel Corporation have, however, announced that no change is to be made in the prices of finished steel products for the year 1904. The price at mill of steel rails remains at \$28 per ton, which price has ruled for three years. Orders for 250,000 tons have been booked for 1904 by that corporation, and it is said that the full capacity of all the mills for the next seven or eight months has been sold.

The production of pig iron continues to exceed all previous records. In May this country produced 1,758,000 tons and on June 1 the weekly capacity of furnaces in blast was 398,139 tons, an increase of nearly 54,000 tons compared with a year ago. The present rate of production is nearly 21,000,000 tons a year.

While production of iron has been increasing, imports have also grown very rapidly, and will probably amount to \$50,000,000 in the fiscal year just ended. Not since 1891 have these imports reached such a total, and in 1899 they were only about \$12,000,000.

In another industry closely allied to the iron trade there is also a largely increased production. There is promise of a larger output of anthracite coal during the present calendar year than in any previous year. For the first six months of 1903 the production amounted to 81,848,545 tons, while the total for the entire year 1902 was only 31,200,890 tons. The strike last year reduced the production in the last half of 1902 to practically nothing. In June of that year the output was only 92,203 tons, while this year it was 5,400,000 tons. The largest yield in any year was 53,568,601 tons in 1901, and in the absence of further strikes this year's record will probably be 60,000,000 tons.

It is at this time of year that the Government closes up its accounts for the fiscal year, and its finances are in excellent shape. During the year just ended the receipts have exceeded the disbursements by \$52,710,936, and there was in the Treasury on June 30 a cash balance of \$231,545,012, an increase for the year of \$19,357,651. There is \$681,000,000 of gold in the Treasury, of which the Government owns \$252,000,000.

Under the Treasury circular of March 26 last there have been refunded into two per cent. bonds \$74,202,400 of other bonds, reducing the annual interest charge \$1,339,962. The Government purchased during the year \$16,529,600 bonds for the sinking fund, reducing the annual interest charge \$661,437. On June 29 the Secretary of the Treasury announced that refunding would cease on July 31.

There has been a large increase in the volume of circulation during the year, the total now being \$2,375,943,387, an increase of \$126,552,786. There was an increase of \$72,957,780 in gold certificates and of \$55,998,559 in National bank circulation.

The growth of the National bank system has been remarkable. There were 537 new banks organized, while only five National banks failed and seventy-two have gone into voluntary liquidation. The capital stock has increased \$42,000,000, deposits \$132,000,000 and loans \$194,000,000.

THE MONEY MARKET.—Early in the month rates for money were firm, being influenced by gold exports, but there was a gradual decline until near the end of the month when the rates became stiffer in anticipation of the usual large disbursements

on July 1. At the close of the month call money ruled at $4\frac{1}{2}$ @ 10 per cent., the average rate being $5\frac{1}{2}$ per cent. Banks and trust companies loaned at $2\frac{1}{2}$ per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 4 per cent. for 60 to 90 days, $4\frac{3}{4}$ @ 5 per cent. for 4 to 5 months, and 5 @ $5\frac{1}{2}$ per cent. for 6 to 7 months on good mixed collateral. For commercial paper the rates are 5 per cent. for 60 to 90 days' endorsed bills receivable, 5 @ $5\frac{1}{2}$ per cent. for first-class 4 to 6 months' single names, and 6 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The condition of the local banks at the end of June was more favorable than a month ago or even in the middle of the month. The deposits on June 13 showed a decrease of \$34,000,000 during the previous four weeks about one-half of which was recovered in the following two weeks. The deposits now are about \$904,000,000, or nearly \$52,000,000 less than they were a year ago and \$68,000,000 less than on July 1, 1901. Loans show similar changes falling off nearly \$26,000,000 between May 16 and June 13 and increasing more than \$10,000,000 since the latter date. Loans, however, are about \$20,000,000 more than they were a year ago, and \$21,000,000 more than on July 1, 1901. Loans are now larger than they ever were before at the same date although \$36,000,000 less than they were last February. Loans are still in excess of deposits, at the present time about \$10,000,000. The surplus reserve is nearly \$13,000,000, the largest since February 14 last.

MONEY RATES ABROAD.—Rates for money in European centres are a fraction lower. The Imperial Bank of Germany on June 8, however, advanced its rate of discount from $3\frac{1}{2}$ to 4 per cent., and still maintains the higher rate. The Bank of England on June 18 reduced its rate to 3 per cent. from 4 per cent., the rate made on May 21. The Bank of Bombay made three reductions during the month, lowering its rate from 8 per cent. to 5 per cent. Discounts of 60 to 90 day bills in London at the close of the month were $2\frac{5}{8}$ per cent. against $3\frac{1}{4}$ per cent. a month ago. The open market rate at Paris was $2\frac{3}{4}$ per cent. against $2\frac{5}{8}$ per cent. a month ago, and at Berlin and Frankfort $3\frac{1}{4}$ per cent. against $3\frac{3}{8}$ per cent. a month ago.

000 and Russia the same. Germany gained \$5,000,000. Compared with a year ago France has lost \$11,000,000 and Germany \$21,000,000, while Russia gained \$16,000,000.

FOREIGN EXCHANGE.—The sterling exchange market was lower and under the influence of foreign buying of American securities tended downward late in the month. The high price of cotton has made the supply of bills for that staple short, and corn exports have also been light. About \$10,000,000 of gold was exported.

Fine gold bars on the first of this month were at par to ¹/₄ per cent. premium on the Mint value. Bar silver in London, 24¹/₄d. per ounce. New York market for large commercial silver bars, 52¹/₂ @ 53¹/₂c. Fine silver (Government assay), 53 @ 54¹/₂c. The official price was 52¹/₂c.

UNITED STATES FOREIGN TRADE.—The exports of merchandise in May did not go much above \$100,000,000 and they make the lowest record for that month since 1897 with the single exception of 1899. The exports were \$9,000,000 less than in April and \$32,000,000 less than in March. Imports of merchandise continue to show gains over the records of previous years, but they were nearly \$9,000,000 less than in April and \$17,000,000 less than in March. Their total value was nearly \$79,000,000, leaving an excess in exports of \$21,000,000. The total exports for the eleven months ended May 31 are \$1,824,000,000, the largest except in 1901; the total imports are nearly \$943,000,000, the largest recorded, and the net exports are nearly \$881,000,000, the smallest balance since 1897. We have a favorable gold balance of nearly \$8,000,000 up to May 31 but June exports will probably extinguish it.

GOLD AND SILVER COINAGE.—During June the mints coined \$610 of gold, \$3,-840,222 of silver and \$111,534.89 of minor coin, beside 11,500,000 pieces for the Philippines. The coinage for the fiscal year ended June 30 aggregated \$74,203,000.43, of which \$45,721,773 was gold, \$25,996,536.25 silver, and \$2,484,691.18 minor coin. The coinage of silver dollars amounted to \$17,972,785.

NATIONAL BANK CIRCULATION.—There was an increase in the amount of National bank notes outstanding last month of \$7,227,445, making for the year an increase of \$56,998,559. The bonds deposited to secure circulation increased in June \$7,500,000, the total now being \$375,847,270 of which \$367,400,950 are two per cent. bonds. The National banks have on deposit with the United States Treasurer \$152,832,020 bonds to secure public deposits, of which \$103,833,200 are two per cent. bonds, \$17,290,000 State and city bonds and \$2,971,000 Philippine Island certificates.

Total.....	\$342,160,770	\$352,096,120	\$367,827,920	\$375,347,370

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, \$5,324,700; 5 per cents. of 1894, \$4,223,450; 4 per cents. of 1895, \$10,494,750; 3 per cents. of 1896, \$7,015,020; 2 per cents. of 1900, \$108,833,200; District of Columbia 3.65's, 1924, \$1,699,000; State and city bonds, \$17,290,900; Philippine Island certificates, \$2,971,000, a total of \$153,832,020.

UNITED STATES PUBLIC DEBT.—The public debt statement of June 30 shows that the interest-bearing debt was unchanged in amount in June, but about \$5,000,000 of three and four per cent. bonds were exchanged for two per cents. About fifty-eight per cent. of the total is now carrying only two per cent. interest. The aggregate debt is about \$2,000,000 less than a month ago, and the cash balance in the Treasury was increased \$9,000,000. The net debt less cash in the Treasury was reduced \$10,600,000 and is now \$925,000,000 or only \$10,500,000 more than the amount of bonds outstanding.

BANKERS' OBITUARY RECORD.

Adams.—H. E. Adams, Cashier of the First National Bank, Hooper, Neb., died May 29, aged forty-four years. Mr. Adams was a native of Wisconsin, but was for many years a resident of Nebraska, where he had been connected with banking for a long period.

Arnold.—Cyrus Arnold, prominently identified with banking and business and political affairs, at Woonsocket, R. I., died May 29. He was for about twenty-five years Vice-President of the Citizens' National Bank, resigning last January on account of failing health. He had been a member of the General Assembly and had held a number of local offices.

Barnes.—Charles D. Barnes, President of the Southington (Ct.) National Bank and Vice-President of the Southington Savings Bank, died May 31, aged sixty-nine years. He was a native of Southington, and was prominently connected with business enterprises there. He had also held many local offices and served several terms in the State Legislature.

Church.—Col. George Church, President of the Great Barrington (Mass.) Savings Bank, died June 27, aged nearly seventy-seven years. He was well known throughout Western Massachusetts, where he had been successfully engaged in manufacturing for a long period.

Hart.—Lemuel H. Hart, Secretary of the Harlem Savings Bank, New York city, died May 28, aged seventy-two years.

Hubbard.—Samuel B. Hubbard, President of the Mercantile Exchange Bank, Jacksonville, Fla., died June 21. He was a native of North Carolina, but was a resident of Jacksonville for many years, and was connected with a number of large and successful business undertakings in that city.

Hutchinson.—Pemberton S. Hutchinson, President of the Philadelphia Saving Fund Society, died June 26. Mr. Hutchinson was also director of a number of Philadelphia banks and other corporations. He was born at Lisbon, Portugal, where his father was the American consul.

Hyde.—Dana W. Hyde, President of the Cambridgeport Savings Bank, Cambridge, Mass., died June 15. He was born at Brattleboro, Vt., in 1839, and went to Cambridge while a boy. After engaging in business for a time in the West, he returned to Cambridge and embarked in merchandising, and also became president of the Cambridge Mutual Life Insurance Co., President of the Cambridgeport Savings Bank, and a director of the First National Bank.

Locke.—Frederick A. Locke, who was for fifty years Cashier of the Mechanics and Traders' Bank, New York city, died June 20, aged ninety-four years.

Rise.—Adam Rise, President of the Valley National Bank, Lebanon, Pa., died June 3, aged eighty-five years.

Smith.—Major Samuel W. Smith, President of the Bank of Malvern, Ark., died June 5. He was a native of North Carolina, but had long been a resident of Arkansas.

Sprague.—Col. Nathan T. Sprague, founder and President of the Sprague National Bank, Brooklyn, N. Y., died May 24 in his seventy-fifth year. He was a native of Vermont and in early life was engaged in banking at Brandon and Rutland, and also interested in other business enterprises. In 1883 Col. Sprague removed to Brooklyn and established the Sprague National Bank, which he has successfully managed ever since. He was also one of the organizers of the City Savings Bank, of Brooklyn, and was active in the promotion of other business and benevolent organizations.

Winchell.—Cyrus Winchell, Vice-President of the People's Savings Bank, Rockville, Ct., and acting President for some time, and also a director of the Rockville National Bank, died June 18, aged seventy-four years.

THE BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SEVENTH YEAR.

AUGUST, 1903.

VOLUME LXVII, No. 2.

THE TREASURY SURPLUS for the fiscal year 1903 turns out to have been \$52,000,000. Of this bond redemptions have absorbed \$24,000,000 and the balance has nearly all been placed with depository banks. The Treasury therefore has drawn practically no cash from circulation.

The estimates of the Secretary of the Treasury for the fiscal year 1904 expect an increase in the combined customs and internal revenue and a small increase in expenditures. He estimated the surplus for the fiscal year 1904 at \$51,800,000. His estimate for 1903 was exceeded by \$10,000,000. The indications now seem to point to the surplus for 1904 being also in excess of the estimate. There is, however, the prospective expenditure for the Panama Canal if Colombia ever allows the bargain to be closed. The general outlook therefore is good that for at least a year to come the Treasury surplus will not be a disturbing element in our money market to any serious extent. It is, however, risky to venture any very positive prophecy on a subject that may be affected by so many unforeseen contingencies.

The freedom with which the banks are now used as depositories of the public money will go far to obviate bad consequences even should the revenues be considerably swollen beyond what is now anticipated. The public is beginning to understand that keeping public moneys in the banks does not mean any special favor to these institutions, and that the business men are the ones who benefit the most by this departure from the custom of keeping the Government cash in its own vaults. In view of this better understanding of the matter that now prevails, and also because both parties have used this method of lessening the evils of the Treasury surplus, it has become impossible to raise any political issue, as Mr. BLAINE attempted to do during Mr. CLEVELAND'S Administration. Bank favoritism cannot readily be charged so long as the banks receiving the public moneys are obliged to furnish bonded security.

Governmental influence upon the future of the money market seems therefore to be reduced to a minimum for a year at least. All that remains is to see that the demands of business are met as they arise. If any pinch should come the banks cannot very well look to the Treasury, practically without any locked-up surplus, for assistance, as they have done so often heretofore. They will have the opportunity to figure out the needs of business as they arise, without any danger of Treasury interference.

THE RECENT UTTERANCES OF MR. CANNON, the prospective Speaker of the next House of Representatives, appear hostile to the success of any financial legislation at the next session of Congress, and seem to settle adversely in advance the fate of measures like the ALDRICH and FOWLER bills. Too much importance may, however, be attached to such manifestos, inasmuch as no one can predict what may happen in the money market before Congress meets. Financial legislation in the United States has, as a rule, been forced upon Congress by the immediate pressure of current events, and it is this custom of waiting for an emergency to materialize, before Congress takes action, that has impressed on the monetary laws of the country their piecemeal character.

It is vain to urge that the time to make wise changes in these laws, so as to impart a well-balanced and uniform character to the monetary system, is when the country is prosperous, so that the advent of harder times may find the business world better prepared to prevent disaster. As long as no one feels the imperfections which only show themselves under strain, every one is lulled by that soothing sapience of letting well enough alone. Congress, in its habits of legislation, reflects popular thought and feeling, and the happy optimism of the American people, confident from the good luck they have had in the past, of coming right side up and comparatively unharmed through difficulties at the time pronounced most appalling and even insuperable, leads them to believe that whatever difficulties, whether foreseen or unforeseen, arise Providence or good luck or the unsurpassed wisdom of our legislators, will provide an adequate means of overcoming them. Do not cross the bridge till you come to it, is a very convincing maxim, but often applied and used as a source of comfort where there are grave doubts whether the bridge when reached will support the weight put upon it or whether the bridge has yet to be constructed. But because of this habit of mind, and the impossibility of foretelling the future, Congress has often been called upon most unexpectedly to provide the means of escape from financial disaster, and until next December little confidence can

be placed in prophecies, even by so high an authority as the prospective Speaker of the House, that financial legislation can be avoided.

Despite their happy faith in the future when prosperity prevails, the American people call very strenuously on their legislators when business troubles begin. The critical time of the year has yet to be passed through. The fall season, with the movement of the crops and the gathering up of the profits of the season's enterprises, is what brings the strain on the money market. The same inconveniences which have manifested themselves in previous years under the present monetary laws may again threaten. The condition of the banks, with their great extension of loans and decrease of reserves, does not point to any greater ability to meet sudden new demands than heretofore. The Treasury may be forced by increased revenues to withdraw funds from the money market. This fall may again see the old devices—bonds purchased, interest advanced, public deposits placed with the banks, etc.—which have so imperfectly met the demands of the moment, resorted to. These old devices depend for success on the public security market, and the decreasing debt of the United States, and the continually diminishing proportion which this debt bears to the wealth of the country render these means of relief of the money market less and less effective. No one can say positively that the next Congress may not be forced to consider some measure of a financial character. Pressure in the money market the coming fall, from the necessity of moving abundant crops, or a condition of uncertainty and distrust caused by crop failure, may cause such a demand for more money that it will be impossible for Congress not to respond.

The danger of past neglect in not providing some means by which the banks can relieve unexpected or unusual pressure for money, is that opportunity will be afforded for the growth of a new crop of financial heresies. Foreign observers have prophesied that under sufficient stress of business and industrial disaster even the silver heresy might again recover strength. This is very improbable; the greater danger now is that under such stress, and controlled by other powerful influences, Congress might authorize a bank currency which might inflict all the evils of fiat money or depreciated silver on the suffering public. It is hoped that all conditions will continue favorable, that crops will be abundant, and that there may be no difficulty in the money market consequent on the absorption of funds by the foreign and domestic markets. It is, however, too soon to say that Congress, however adverse to financial legislation, may yet be moved by popular demand to some action at its next session which will remove some of the defects of the present monetary laws of the country.

THE DEPRESSION IN INDUSTRIAL STOCKS and to some extent in railway securities is the result of the overcapitalization which has been going on during the past two years. Promoters have taken advantage of the confidence of the public in the unprecedented prosperity of the country to put out, through syndicates and otherwise, stocks to an extent, it is stated, in many cases ten times what would really have been required by the actual necessities of the business. The same policy has been pursued in the case of many railroads. It cannot be expected that the earning capacity of the concerns so capitalized will pay dividends on all this watered capital. In so far as these securities have been purchased by the public with actual money, there must be great losses incurred. It is no wonder that this reckless overcapitalization arouses suspicion in the minds of foreign capitalists as to the solidity of the financial situation in the United States. They are at a distance, and these fireworks of finance blaze up conspicuously. Still, the general business of the country, the solid, every-day enterprise, has been little affected by the exploits of the promoters. Those who have put money into the speculative stocks could probably afford to lose it. But whether they could or not, the money so put in has not been lost; it has merely changed from one owner to another, and has probably been placed in more solid investments or in enterprises really remunerative.

The record of failures in ordinary business during the current year shows improvement over the year preceding rather than otherwise, and the probability is that only a small minority of the people of the country have been unfavorably affected. The industries of the United States go on as before, and productive power is not affected by this rage for speculation, which has now to a certain extent proved its own futility. The watered stocks will soon find their proper level, and those in whose hands they finally rest will have to pocket their losses and say no more about it. There has been no destruction of real wealth. Gambling operations never have any permanent effect on the productive resources. But this speculation on so immense a scale has been an object lesson which the American public will not soon forget. Although history repeats itself and crazes of speculation will doubtless again occur in the future as they have in the past, yet it is doubtful whether the investing public who have been bitten so severely will be so deceived again for many years to come. Moreover, it is almost too soon to determine the real value of a large part of these undigested securities. The business plants and opportunities for profit which these securities represent have not yet had a chance of demonstrating their earning power. Even the investor who now thinks himself the most unfortunate stands a chance of being favorably disappointed. Great as

the amounts involved in many of these schemes seem to be, they bear a small proportion to the whole wealth of the country. If it were not so, the outlook would be gloomy. On the contrary business still manifests the greatest hope and confidence. Prices are maintained and consumption of products does not seem to have diminished.

With reasonable success in agriculture the country will enter the year of the presidential election on a better financial footing than ever before during the past decade.

BANKING METHODS appear to be keeping up with these hustling times. It is now the custom for some institutions to make a house-to-house canvass, soliciting accounts and offering conveniences in banking facilities. This seeking of business must be somewhat expensive, but that it pays in the end, if it does, proves that bankers' profits are not yet altogether discouraging. The day was when banking was an extremely mysterious and dignified business, surrounded by secrecy and reticence. The banker favored low, cobwebby banking rooms, with as little sign of business extant as was possible. A banking room was much like a wine-cellar—all its wealth down in the vaults. Each bank was also a mystery to every other similar institution, and such human nature as was not entirely dried out of the banker was expended in discreet though none the less malicious gossip about competitors. The banker used to awe by his personal austerity. Nowadays the banker is apt to be a whole-souled, fresh-looking fellow, just like any one else in fact, and the only mystery about him is how so generous and humane an appearing person can manage to say no when asked for a loan without collateral. In fact, there is now little difference, in appearance at least, between a philanthropist and a banker.

The banking-houses of to-day are magnificent palaces fitted with every convenience for the handling of the wealth that pours into their doors. The customer of to day can undergo very little personal hardship when he has money to count or coupons to cut off. The magnificence of the surroundings appeals to the spirit of reverence, just as did the artistic embellishments of Solomon's Temple to the true worshipper. And if the dollar is the deity now sincerely worshipped by all, and in whom no one as yet appears to have lost faith, why should not his temples be splendidly appointed?

Some of the old spirit still survives among the older bankers. In every branch of human employment there are some old fogies. These older bankers are like the old doctors and lawyers. They feel that modern hustling methods injure their dignity and the dignity of the

cult to which they belong. Advertisement was once considered bad enough, drumming for accounts was worse, and yet they had to accommodate themselves more or less to these methods. The advertising and drumming were still conducted with a certain dignity. Now this house-to-house drumming, just like the work of the weekly payment installment insurance companies, cannot fail to make the gorge of the old-school bankers rise. But the Savings banks have shown there is the basis of great things in small accounts. Little drops of water make the mighty ocean. Why should not the enterprising banker enlarge his coffers and fill them with these crumbs despised by the dignitaries of the profession? The comforting influence of success consoles the hustler for the supposed loss of his dignity, and this loss is further compensated by the thought that he is really serving a public which the other banks do not reach. DANIEL WEBSTER'S "There is always room at the top," seems in this case just as true when changed to read, "there is always room at the bottom." Below the lowest deep, there is still a lower. But after all, there is no reason for any banker to be disgruntled by this raking of the depths. It increases the use of banks by the people, and doubtless brings into and keeps in circulation large sums in the aggregate which would otherwise be locked up in secret hiding-places.

The ideal limit of banking will never be reached until every person who has an income keeps a bank account. There should be banks therefore for small accounts as well as for large. If such a limit were attained there would be little room left for middlemen, for the money-sharks who thrive between the great banks and the poor men whose accounts are too small for the existing banks. The banks with the large accounts would not suffer. They would, on the other hand, benefit greatly though indirectly. Every movement in banking toward a greater accommodation of the public increases the mobility and availability of the wealth of the country. Probably the progress of the world has been retarded by ideas of greatness and dignity indulged by bankers, leading them to refuse to bother with the man of small means or only deal with him through the sordid fingers of the middleman. The system of independent small banks in the United States, gathering up all the business, large or small, in their immediate localities, has almost abolished the individual money-lender in the country districts. In the cities he still exists because the city banks have been usually of too large a calibre to thoroughly exhaust the small accounts.

This house to house work in the cities will, if successfully carried out, sound his doom there. He will have to retire to some country where a monopoly in banking fosters only large and dignified institutions.

PREDICTING A FINANCIAL CRISIS is sometimes an easy way of gaining a reputation as a prophet, for with such events it is frequently the expected that happens. If only enough people could be made to believe that the signs of the times portend a financial crash, it would probably arrive at the time announced. But people are so busy and the evidences of prosperity are so numerous as to cause more or less indifference to these evil prophecies. Perhaps the expression of such pessimistic opinions has some good effect in checking the otherwise too buoyant disposition of traders and speculators, and induces that degree of caution necessary to sound and healthful business conditions. On the other hand, it is possible that these gloomy forebodings may go too far and unfavorably influence the legitimate business of the country. Intemperate speech is becoming altogether too common for the public security. For although such injudicious utterances are largely discounted by most people, they are liable to inflame the minds and excite the fears of the unthinking. Under the present conditions the public mind does not readily succumb to vague and unreasoning fear. But a slight change of circumstances might quickly create the atmosphere favorable to the spread of the germ or miasma that breeds commercial and financial disaster. A financial panic, like a prairie fire, is easily started, but extinguished with difficulty.

An instance of lack of careful statement is afforded by an address on "The Editor and the Banker," by JOHN A. SLEICHER, editor of "Leslie's Weekly," delivered before the National Editorial Association of the United States at its eighteenth annual convention at Omaha, July 9. In the course of his address Mr. SLEICHER said: "If conservative measures are not adopted soon, a financial crisis will arise that will lead in the near future to revolutionary legislation, and this should always be avoided as a public calamity. * * * Not in this generation have our finances been in a more critical condition."

This is certainly an exaggerated statement, and of a kind calculated to aggravate the ills it seeks to remedy. It is only fair to Mr. SLEICHER to say that his address did not abound in such alarmist expressions, but was on the whole an earnest and well-considered plea for financial legislation. But it might be expected that those engaged in a vocation having for its aim the moulding of public opinion would refrain altogether from utterances tending to excite needless alarm. Expressions not unlike those quoted above have also been heard at recent bankers' conventions, and with as little justification in fact. For there is nothing in the present financial situation to cause distrust nor to superinduce a greater degree of caution than the prudent banker will observe at all times. Moreover, while some

financial reforms are desirable, it is exceedingly doubtful if any law that Congress would or could enact would greatly palliate or afford any permanent cure for those ills about which there is so much complaint. The camels, weasels and whales which the POLONIUSES of the press and others affect to see in the financial sky are in many cases merely the results of an attempt to follow those regarded as experts in monetary lore. Some of those considered experts are theorists and doctrinaires who must have a financial system made exactly to fit their views, regardless of the conditions under which it is to operate. They can not conceive of any variations in the laws which they see at work in the most highly-civilized States, and would therefore impose the same monetary system on the inhabitants of Terra del Fuego or the Fiji Islands as has been found to work well in France or Germany. They fail to realize that circumstances alter cases.

While it is believed that it would be better if the greenbacks were retired or gradually converted into gold certificates, and that the Sub-Treasury laws should be modified so as to permit greater freedom in the deposit of public funds in the banks, and that it would also be beneficial to devise some means of issuing bank notes other than on the basis at present required, none of these provisions nor all of them together if embodied into law would prevent financial crises, nor would a failure to pass them necessarily produce a catastrophe.

Except the silver, which is largely absorbed by the retail trade of the country, and which is practically a subsidiary form of currency, our financial system is not unlike that of England. Paper currency, here as there, can be issued only against gold and the public debt. Whatever defects such a system may have, it is hardly deficient in security, and the state of our finances can not be so critical as claimed while the paper currency is as safe and as adequate in volume as now.

The strong and weak points in our financial system are well known, as there has been no substantial change, except in the direction of improvement, for about forty years—unless the silver situation be considered; but the silver situation is slowly improving by reason of the increase in the gold currency and the natural growth of the country. Whatever weakness there may be in other respects bankers can not be ignorant of it, and from long experience they should be prepared to counteract its ill effects whenever and wherever they may be manifested. In the present high development of banking, it would be childish for the skilled financiers at the great centres to attribute a financial crisis, should one occur, to bad monetary laws.

Such apprehensions as exist are attributed to the expected demand for money to move the crops, but it would be a strong indictment of

the capacity of American bankers if they failed to make adequate preparation for meeting demands which they knew far in advance would be made upon them at a certain time. It would indicate an equal lack of foresight if it should develop that the great banks have permanently locked up their funds in attempting to float unmarketable securities to an extent that renders it impossible for them to afford the required aid for the crop moving period.

The probable fact is that the banks will make all necessary provision to respond to the fall outflow of money, and if their own cash resources should prove inadequate to meet the demand it will be supplied, nevertheless, by the use of their credit in drawing gold from the world's markets.

The crops are the basis of the country's commercial prosperity, and the fact that the banks are to be called on this year to move an unusually large volume of products is rather a matter for rejoicing than for alarm. If there were no crops to move the prophets of ill-omen might be listened to with closer attention.

PUBLICITY OF THE CONDITION and general business of financial institutions is a comparatively modern development. Before the National Currency Act, as the National Banking Law was then styled, was passed in 1863, there was no systematic method of obtaining information as to the real status of the banks of the country. The State banking laws required reports to be made to certain State officials, at intervals varying in each State, and the provisions as to dates and the penalties for failure in accuracy of the reports were on an extremely vague basis.

The interests of the public are supposed to be guarded by the opportunity given by reports periodically published to know about the real condition of the banks. But unless reports are really accurate and representative of true conditions, they are worse than useless. Dishonest bankers use them as a cover under which they carry on their schemes.

The National Banking Law provided at first for quarterly reports of condition. It was found, however, that the day when the public were to be admitted to inspect the properties of the bank, being known in advance, every preparation was made for a dress parade. The show windows were put in order. These quarterly dressing-up days had a bad effect on business; customers were disappointed because they could not get loans, or because they were called upon to liquidate for no other reason than to enable the bank to make a good showing. The quarterly report once made, the bank feeling secure for three months to come, felt the trammels of the law fall off and

paid little attention to reserve provisions until within a week or two of the next quarter day. There were thus artificial alternations of freedom and restriction in the money market very detrimental to business. Congress changed all this by requiring the banks to respond to the call of the Comptroller of the Currency for reports of condition on some day past, five times during the year at least. The only one who could know the days is the Comptroller of the Currency.

The statistics derived from the reports of the banks made in answer to these calls of the Comptroller are as accurate representations of banking business flowing in a normal manner as can be obtained. The only question that remains is to what extent, if any, does the knowledge on the part of the bank officers that at five unknown periods during each year the banks must show up their business proceedings affect the business community which depends on the National banks for facilities. In calling for five reports within the year as year succeeds year there comes a certain regularity, which enables the banks to guess very close to the actual date on which the report will be called for. There is undoubtedly some degree of precaution taken to make a good showing within a few days each way of what has come to be a reasonably regular date.

The general effect of publicity such as is required of the National banks is undoubtedly good, but there are ways in which it might be used as a cover for operations that might work injustice both to the stockholders and the customers of the bank. The reports made to the Comptroller are supposed to show up all that the bank possesses at its true value. The general public is on the alert to detect a bank that tries to make its condition better than it is. They seldom suspect that sometimes the reports of a bank do not in reality show all that it really possesses. It is the ambition of a bank to show what is called a clean balance-sheet; that is, all its entries representing items readily convertible into cash. Real estate and other slow items are often charged to profit and loss and surplus, when there is really no loss about it. It is the same with premiums paid. The object of this charging off is fair enough, and the intent is to charge back to cash when the slow items shall have been liquidated. In reality, in the case of many old banks, there are valuable properties which do not appear in the balance-sheet at all. It is thus that the laudable desire to show a clean balance-sheet vitiates to some extent the law that the reports shall be a perfect showing of the condition of the banks.

When once a secret hoard outside of the balance-sheet is established, it is hard to break the directors of the habit. It is so pleasant to nod mysteriously and intimate that the true richness of the bank

is not dreamed of by the public. The unknown, moreover, generally passes for the magnificent, and the secret hoards of the bank may enlarge its credit.

It may be said that no harm can come of a fault which, if it is a fault, is on the right side of the account. But it is this private knowledge of resources hidden from the general run of stockholders that gives the opportunity of purchasing shares below their real value, often changing the control of the bank and bringing in a different character of management. Temptation is also thus spread before dishonest officers. It is not believed that the advantages of what is called a clean balance-sheet are a compensation for the evils that may evolve from a balance-sheet which does not represent the true value of the bank's stock.

The publication of reports of financial and industrial institutions is a benefit when such reports show the truth. Unless due precautions are legally taken to enforce true reports, publication is really a delusion and a snare, being as easily used to mislead and defraud as it is to protect. When the public has once learned to rely on reports as they have upon those of the National banks made to the Comptroller, it is of the greatest importance that this confidence should not be betrayed.

THE WORKING CAPITAL OF THE INDUSTRIAL TRUSTS seems to have been put to a severe test during the present summer. Many of them are said to be somewhat straitened for means to carry on their operations. It has been found that these concerns, made up as they are by the combination of a number of corporations formerly doing the same business on an independent basis, have not a borrowing ability equal to that possessed in the aggregate by the separate corporations.

An advantage of the trusts was said to be greater economy of management and production, and from this it would naturally follow that their results would be accomplished with less working capital than was required in the aggregate had the corporations of which they are composed been working each by itself. This certainly was an advantage. But it is evident that a number of distinct corporations each with its own supporting banks would be likely to have altogether a greater borrowing power than one single great trust, with only one system of supporting banks. As far as miscalculation of the working capital is concerned, this might easily have been made in the case of such comparatively new organizations. It might easily require some years to know exactly what the demands of business on new lines would amount to.

The great demand for money during the present season has drawn heavily on the resources of the banks, and when the large loans

which a great trust requires are demanded of a lessening circle of banks, even those of the greatest resources feel that they are falling into the bad banking habit of placing all their eggs in one basket by complying too readily.

It has been remarked before that in this era of combinations and consolidations the banks have been left behind. Notwithstanding the mergers and consolidations of banks which have already taken place, this dilemma of the industrial trusts would appear to indicate that there are still too few banks of sufficient resources to furnish the banking facilities these institutions require.

BORROWING ABROAD has been resorted to frequently in the past few years to supply the inadequacy in the supply of the home currency. The credit of the great international bankers enables them to obtain supplies from abroad which, if they do not bring gold here, at least reduce the amounts which would otherwise be exported. As our paper currency has now no efficient element of elasticity the increase and decrease of the general mass of money is dependent almost entirely on the gain or loss of gold. Therefore the credit of our great banks and bankers abroad is of the utmost importance.

It can hardly be disputed, with the tendency to over speculation induced by the confidence in the prosperity of the country, that the strain on the money supply is now very great, and that any great export of gold might have the tendency to lower the present confidence and cause the locking up of money and the tightening of the money markets. The rates for money abroad in London, Berlin and Paris become, therefore, of much more importance than they were in former years, inasmuch as they are influenced, and also have a much greater influence on financial operations in this country than they had formerly. The reduction of the bank rate in London and the raising of it by the Imperial Bank of Germany attracted much attention in the latter part of June. The lowering of the Bank of England rate was explained by the gradual cheapening of the open market rate there. One theory of the raising of the rate by the German bank at the same time was that it was done as a sort of protection from American borrowers, who are supposed to already owe considerable to Germany, and indirectly to prevent an outflow of gold to this country.

Despite all the doubts which have been expressed as to the condition of American credit abroad, if the theory mentioned has any real foundation, the action of the German bank would indicate that bankers in that country are all too willing to lend here, perhaps to the detriment to German business interests. These foreign rates,

moreover, indicate the operations of the cosmopolitan bankers and throw a light on the varying shades of opinion as to the credit of our bankers abroad, which has become of so much importance as was mentioned above because of its importance in maintaining the elasticity of our currency. Paris is the great recipient of such gold as has been exported from here, and this would seem to indicate that the French bankers were those who were the least optimistic as to the situation in the United States. France has, perhaps, the largest capital of any European nation in proportion to her own legitimate business enterprise, and for this reason is the chief money-lender. The return of the gold to France is also held to mean that loans to the German and English money markets were being called in or repaid.

It is somewhat startling to arrive at the conclusion that at the present time our money market is dependent not only on the condition of our own banks and the Treasury of the United States, but also on the condition of foreign money markets. The successful movement of the crops this fall and the prosperity of the general business of that period depend on the ability to add to the supplies of money by foreign borrowings. Banking has become so cosmopolitan that the reliance on the ability to obtain capital from all quarters when needed is well founded as long as the enterprise and industry of the people of the United States are successfully exerted. It remains, however, that should other conditions arise the difficulty of borrowing money when needed would be increased, and in that event the imperfection of our currency system might be severely felt.

THE PROGRESS OF BANKING REFORM IN THE year 1903 has been slow. Two points have, however, been gained obvious to every one. The National banks can now issue currency to the par value of the United States bonds deposited, and there is a freer use of the banks as depositories of public money. But, although not so obvious, other gains than these have been made. The question of improving our methods of banking so as to render them more useful to the business of the country has been looked at from many points of view. At first the plan-makers had it all their own way, and their favorite scheme was an asset currency. These plans, though they had the sanction of great brains and great names, have been slowly disintegrating under the force of the intelligent criticism of practical men. They have served their purpose in arousing discussion which has not only demonstrated the utter unfitness of the plans, but has also to some extent thrown light on what the real plan should perhaps be. The reports and bills of the Monetary Commission and the so-called

Fowler bill, with its accompanying explanations, are monuments of the indefatigable industry and sheer force of intellect of the originators. But they were crude and rough in their construction, and the bright light of criticism has shown that they are about as well adapted to the purpose in view as the Druids' Temple at Stonehenge would be adapted to the purposes of Madison Square Garden. Neither of the plans referred to, nor other plans of like character, appears to bear, either in the bills proposed or in the reports and explanations accompanying those bills, any internal evidence that the authors ever clearly understood the problem which they attacked. Nowhere do they seem to elucidate the real principles of banking, or the resemblances and differences between banking as carried on in the United States and as conducted in other countries. No doubt they have ransacked banking history, and have studied contemporary banking, but they do not appear to have really sensed the true application of the information they have acquired. The principle that banking is the great factor of modern times in the transfer and distribution of wealth, while it may have been recognized, has not been properly applied. The transfer of accounts, and the means by which it is or may be done, has nowhere been completely elucidated. The study of the methods prevailing in the United States and the distinctions between these methods and those of foreign bankers have been far from exhaustive. The different classes of banks and financial institutions doing a banking business, their competitions, rivalries and prejudices, both in politics and business, have not been worked out. These plans were calculated to aggravate rather than to heal the sore spots in the existing banking system.

Notwithstanding the obvious failure of the Congressional and other experts to meet the necessary requirements, they have, by affording the critical minds of the public a mark for the exercise of their wits, served a very useful purpose. Nor is this failure any disgrace. The problem was too great a one to be attacked successfully offhand. Constructive minds are rare, while those competent to point out faults and that take an exquisite pleasure in so doing are abundant. Whether the plan-makers possessed the constructive faculty in any great degree may be in doubt, but they had it in sufficiency to afford an object of criticism, and all propositions for banking improvement have so far been criticized to a standstill.

It is now to be hoped that out of all this bank currency agitation the business public will begin to see just what is wanted. The American Bankers' Association has appointed a committee to try to formulate some plan for banking improvement. These failures of the past ought to teach them at least to avoid the errors of those who have gone before them, and study deeper into the real principles involved.

BANK CHECKS AS AN ELASTIC CURRENCY.

The associated banks of New York have apparently adhered rigidly to the adopted rates charged by them for the collection of so-called country checks. It is said, however, that some of the trust companies and, perhaps, some of the banks outside of the clearing-house, are collecting these checks without charge.

It is asserted, and probably with truth from one point of view at least, that the free collection of these checks entails a loss to the banks. The point of view referred to is the narrow one of the observer who looks merely at the check itself considered as an asset, and who eliminates the possible advantage to the bank which the free accommodation of customers in this respect may bring in the way of new accounts and greater deposits. Advertising is a loss viewed in this way, and perhaps it is this tendency to narrowness of view that prevents many conservative bankers from advertising.

The New York associated banks are the strongest in the country and are in the most favorable position to enforce their regulations, wise or unwise. That their situation is of peculiar strength is indicated by the fact that there has as yet been no apparent breach of the rules for check collection charges on the part of clearing-house members. In other cities the banks in the clearing-houses have found it difficult or impossible to enforce similar charges. The exception in New York city, and perhaps a few other cities, only proves the rule that the banks of the country find it better business to collect country checks without charge than otherwise.

Employment of the check has indisputably increased the deposit lines of all the banks. This increase of the deposit lines means that forms of wealth which were formerly immobile and temporarily impossible of liquidation, are now made the basis of bank credits, and thus the whole business of the country is quickened and extended. The profits the banks derive from imparting circulation to the more immobile forms of wealth exceed a million-fold the petty expense of aiding a free collection of checks. In fact, a bank might as well complain of the expense of printing a bank note, as preventing its use, as to complain of the expense of collecting country checks, which is returned to the bank in the great increase of the deposit line. Of course, if a bank or a number of banks are so fortunately situated that they have forced upon them all the business they can handle, then it is not surprising that they seek to eliminate the less desirable business that is offered to them. But the great banks of New York city depend for their resources and power upon the banks of the whole country. They are looked up to by the latter as leaders and advisers. If the use of checks and the efforts of the banks to make this use as convenient as possible for their customers has increased deposit lines throughout the country, then it is easy to see that the New York banks owe much to the circulation of the despised and abused country checks.

An eminent authority has adverted in a pleasant way to the skinflintedness of the country bankers as one of the rocks on which the prosperity of

the country is founded. But in making a tariff of charges for the collection of country checks the great bankers of New York have shown that they exercise the art of disrobing petrifications with less wisdom than that ascribed to their country cousins.

It is surprising that the banks have so long failed to perceive the great and indispensable service which has been rendered by the check, and more especially the country check. With Thackeray, they should recognize the advisability of cherishing a rich uncle.

In the last number of the *MAGAZINE* some suggestions were made as to the possible superiority of the check as a method of transferring bank credits to bank notes. On June 30 the London "*Times*," commenting on the remark of the Comptroller of the Currency at the Georgia Bankers' convention that "bank notes are the best possible form of currency for the business of a community, if made properly elastic and responsive to demand," says that "this is true enough, if the special position of the United States is above consideration, but as a general proposition it is far from true. The use of bank notes is at best a clumsy way of doing business compared with the system of checks existing in England." The remark of the "*Times*" about the special position of the United States being above consideration is a little blind. Presumably the London "*Times*" thinks that banking and business in this country are still in an inchoate and barbaric state, not up to using the more modern system of checks, and therefore still condemned to the clumsy and inefficient bank note. The truth is that banking in the United States is better adapted to the use of the check than to the use of the bank note. The exact method of using checks in England, which the "*Times*" characterizes as superior to the clumsy bank note, might not be adaptable here. The banks of the United States have already adopted and used the check to a greater extent than any country in the world. They were forced to do this by the laws which restricted the use of other methods of transferring bank accounts.

Two things prevent a wider development of the check; one is the laws forbidding checks to be circulated as money in regular denominations, either by State or National banks. This cuts off the banks from the use of forms of checks used to-day in England. The other obstacle is the blind hostility of many of the banks to the country check, because it causes a little expense in the collection. It may confidently be predicted that were an asset currency issued with any degree of freedom by the banks of the United States, the banks would be put to a much larger expense in securing the redemption of many of the notes. It is believed that the expenses of the redemption of a free asset currency, that is if rapid redemption was insisted on, would far exceed the expense now incurred in the collection of country checks.

WELL WORTH THE MONEY.—H. H. Bru, Cashier of the Miners and Merchants' Bank of Globe, Arizona, writes under date of May 5: "I am here with enclosing a draft for five dollars in payment for *PATTEN'S PRACTICAL BANKING*, as per your bill of April 28. The book is well worth the money, and we are pleased with it."

INJURIOUS SPECULATIONS.

The history of corners in cotton, in grain, and in other objects of speculation, has teemed with instances of disaster to the manipulator of this oppressive device, but the speculator, as a rule, will never be convinced, any more than the gambler, but that he, notwithstanding the ill success of previous gamblers, has discovered the only true and effective martingale with which to break the bank and attain unlimited wealth and glory.

There is little use in pointing out that these cornering operations, carried out to the logical conclusion, do harm not only to the operator but to the whole producing community. The doctrine of limits, which is the bane of the gambler's martingale, applies with even more force to the operations of the man who attempts to raise the price of any given product of necessity to the manufacturing and industrial world, or for the supply of food to the masses of the people. No one product is of so vital importance that its price can be forced beyond a certain point. The ordinary consumer will not use a product that is forced beyond a certain price. Substitutes will be used, and with the discovery and introduction of substitutes, the price of the cornered product falls back below what it would have been were it not for the artificial force which has been applied to raise the price. Substitutes may be the same or different in kind. With the cotton corner, if the price of the staple raised in the United States is forced beyond the limit, the consumers look to other countries and encourage production there. Or they may use more largely of other fibrous staples.

It may be said that the reason why this favorite operation of the ambitious operator so often proves disastrous is because of his lack of moderation. He should know the limit which is sure to defeat him and not approach it too nearly. There might be something in this were the cornering of any staple article as easy a matter as buying up, say, for instance, all the eggs on hand in a country store. But a corner of a great staple is not managed so readily. As the buyer advances his operations prices increase on him progressively, and to profit on his latest purchases he must still continue to raise the price. He is in a position where hesitation is fatal, and where to go on is almost sure destruction. The sale to realize profits is the more difficult as the price is forced to the higher limits. But no man of moderation would ever undertake to corner a great staple. It is the very opposite of this quality that constitutes the stock in trade of the great speculator. There are no doubt some men who are mostly guided by a moderate spirit who are occasionally seized with the desire to outstrip the efforts of their competitors. They are like those gamblers who play for their own amusement and excitement regardless whether they win or lose, or rather thinking they can afford to lose a certain amount for the mere pleasure of the thing. To them to win is the greatest pleasure, to lose the next greatest. But even such men are often led by the excitement of the game into excesses they never intended at the commencement. The moral effect of success or failure on the community is equally

bad. Even in the failure of a great corner there is danger to those who possess the speculative spirit. They reason that it would have been successful had such and such contingencies been foreseen and provided for, and think that they now surely see the straight and perfect road to success.

The value of exchanges and the accompanying appliances for obtaining the widest information as to the supplies of the great staples are generally admitted. It is not the conveniences for trading or the information that is collected that is at fault. These aid the trader, the producer and the consumer to form a fair estimate of what markets there are and what prices should be. Speculation of the more reckless type thrives on the imperfection of information and other trading appliances. It is the guesses as to the weather, as to the future supply and demand, which can never be anywhere near accurate, together with the burning desire to get rich quick, that encourage these injurious speculative operations. The cotton grower may delight to hear that the price of his staple is rising, but he owes nothing to the man who makes the corner. The latter does not think of the producer. In fact, he is very careful to avoid building his corner walls when the new crops which interest the producer are ready to market. The time usually selected is when the new crop is still growing, and the old supply supposed to be diminished. By thus forcing the price of the present supply the speculator keeps it back from normal consumption, and when the new crop begins to arrive, it finds the storehouses still blocked with the old. Every farmer is better pleased to find his barns empty when the new crop comes in. But the injury done by corners is more permanent. Often the markets relied on are lost in whole or in part, and periods of severe depression in price are apt to follow these temporary spasms of abnormal quotations.

From the earliest periods the evils of speculation in the great staples of food and clothing have been felt and regretted. Under the form of monopoly fostered by despotic governments they were the cause of great misery and often revolution. The freedom of modern forms of government has not exempted populations from evils of the same nature. The ancient Pharaoh could make a corner in grain, without any immediate serious consequence to himself or his dynasty. The modern Pharaoh often brings about his own doom. What happens to the speculator, ancient or modern, matters little. The consequences to the country at large of such operations is the important point. If our markets are to be destroyed and our future products depressed in price by reckless operations of selfish speculators, bringing periods of depression of business and more or less suffering to the whole people, it were high time that some restriction should be placed by law upon the use of modern financial facilities for forcing abnormal prices. It may be difficult to draw the line between legitimate trade and speculation, and speculation of this ruinous sort, but it is believed that something might be done to check these more violent manifestations of the speculative spirit.

THE SUPPLY OF MONEY —For more than fifty years I have been a careful observer of the course of trade and the general range of prices in the United States, and of the causes which have affected the market value of our agricultural and manufacturing productions. I have known prices to be advanced by foreign demand, or by temporary deficiency of supply, but more frequently by speculation, induced and fostered by redundant currency. I have known prices to decline by the reaction of speculation, and by diminution of the home or foreign demands; but I have never known our farm products or manufactured goods to fail to bring what they were worth, at home or abroad, by reason of insufficient supply of money or its representatives.—Hugh McCulloch, "Men and Measures of Half a Century."

GOLD-RESERVE BANK NOTES.

The Comptroller of the Currency has apparently been overcome by the objections to an asset bank-note currency, for he has lately, before the Georgia bankers, advocated issuing bank notes on the security of a gold reserve, in analogy to the deposit currency. He argued that there is little or no difference between the deposit currency and a bank-note currency.

Viewed from the standpoint of the banker, there is no difference whether he issues bank notes or floats a currency made up of checks on deposit. The profits arise on the loans made in each case, not on the form of paper that circulates.

The reserve which the banking experience of the world has indicated, and the law in more countries than the United States has dictated, for the great deposit or check currency, is about four to one ; four dollars of deposits to one of reserve being very generally allowed and maintained over the deposit banking area. In England the deposits bear a much larger ratio to the reserve, but conditions there favor a wider ratio ; and the ratio maintained is probably too wide for safety.

Under this system, the banker makes loans about equal to his deposits. In other words, under the deposit system, the banker secures profits on at least four times the amount of the reserves he keeps.

But just as wide an experience has dictated that the reserve for a bank-note currency shall be entirely different. Not even the weakest note-issuing bank in Europe, with all the patronage and power of a government behind it, ventures to issue notes to anything like four times the amount of its specie reserve. The Bank of France voluntarily keeps specie to an amount approximating the whole amount of its issues (£143,900,000 in coin to £172,300,000 in circulation, eighty-three per cent.). And the other Government banks of issue evidently strive to do the same. The Bank of Belgium adopts the expedient of keeping foreign gold exchange in a certain proportion to supplement its specie. The uncovered note issues, good, bad and indifferent, in Europe, are not equal to half of the whole of the issues.

The Bank of England under the celebrated Peel Act practically adopts the "currency principle" of one of gold to one of notes. Notes are allowed against about £18,000,000 Government securities included in the capital of the bank, but all further issues are simply notes for gold deposited ; the result being that Bank of England notes are covered in about the same proportion as the notes of the Bank of France.

When the Germans established their Imperial Bank thirty years ago in an age of financial enlightenment, and after the experience which had definitely formed the banking system, they copied the Peel Act and established practically a second Bank of England.

A banking development, which is about as conclusive as that which has established the gold standard, has dictated that bank notes shall practically be covered by their gold security. If this principle is followed by the privi-

leged and pampered government banks of Europe, much more must it be respected by the comparatively small independent, unassisted banks in this country.

It may be said in passing that the experience which has established the currency principle for bank notes is largely that of the United States and England. Whenever banking in England was free, bank-note issues were abused. Panic after panic was caused by over-issues of notes in conservative England until the Peel Act was made necessary. In the American colonies of England and among the States, abuse of bank-note issues, in all forms, was continual and almost universal from the earliest times of the infant colonies until 1865. It is a dark and disgraceful history. The memories of our fathers are clouded with the enormities of the wilcat currency of the early nineteenth century, which followed the continental currency of unsavory reputation, and hundreds of earlier issues of unspeakable character.

One thing the makers of our National banks did well, or as well as they could. They provided that the National bank notes should at least be more than covered by the best securities patriotism could devise in the deadly struggle of the Civil War. They could only be issued to ninety per cent. of deposited National bonds. And even now we have been reluctant to allow the issue of notes to an amount equal to the underlying bonds now become the best paper in the world, valued at a substantial premium over gold. The goodness of the security has made the National bank notes successful, though the principle of their issue is wrong. But in the face of the redemption of the bonds bank notes must eventually be placed upon a different footing.

It may be laid down flatly that the currency principle of notes for gold, equally, with no uncovered issues, is the total and final result of the financial evolution of the world respecting bank notes for circulation.

There is logical reason for this currency principle. Bank notes are intended to be used as money. If they are not used for money without hesitation and without question, they do not accomplish their purpose. If they are practically money, as good as gold, they must be representative of gold, which has become the universal and exclusive money. If bank notes could be provided as money as good as gold and more cheaply, why should gold be used? But gold, and not bank notes, has become money, and the notes cannot usurp the place won by gold. There is no juggle by which we can have gold for money and save three-fourths or even one-fourth of its cost, with safety. If we can economize on gold as money why not follow Mr. Bryan? Sixteen to one would provide us a money that would have nearly half the intrinsic value of gold. Our sound currency friends seem to be trying to find a method of making money not so much better than Mr. Bryan's.

But let us see further about the likeness between a deposit currency and a bank-note currency. The deposit currency of the English-speaking communities grows out of dealings in bills of exchange. Such bills now everywhere constitute a large and typical part of the deposit currency. A bill of exchange is drawn on an actual consignment of goods with which the bill is intimately connected, even if it cannot be said the goods are security for the bill. Bills are founded upon and supported by the goods concerned. The bill circulation is then secured by full value in goods, the ability of the indorsers and of the banks handling the bills.

An accommodation bill substitutes the general security of a business name for the security of the goods. Promissory notes are likewise based on more general security than bills, but they, as well as all forms of credit currency, are based each one on a security peculiar to each transaction. Such instruments are doubly fortified at every point. Every scrap of such currency is based on specially investigated property or security. Moreover the instruments composing the deposit currency are all of definite and short duration. They are constantly being paid off and renewed. In other words, the deposit currency is constantly, from its very nature, being redeemed.

With bank notes the case is entirely different. They are put out on the general credit of the bank. They pass, if at all, without investigation in any of the transactions in which they are used. They are not redeemed by the issuing bank as long as it can be avoided. They stay out indefinitely in good times when they could be redeemed and come back all together when times are troubled and they cannot be redeemed. Compulsory redemption discredits them. There is no tried method of automatic redemption of bank notes applicable to the conditions in the United States. The Suffolk Bank scheme in New England wore itself out, was of no profit to the Suffolk Bank, and could not be operated in the larger sphere of the whole country.

It is reported that the Comptroller, before the Georgia bankers, did not frankly advocate the issue of bank notes at the ratio of 4 to 1, in real analogy to the deposit currency; but that he said he would leave only twenty-five or fifty per cent. of the new bank notes uncovered. This proposition follows more nearly the practice of the minor government banks of Europe. But there is no reason for following their example. And the modification of the proposal simply indicates a confusion of mind and implies a confession that there is no historical precedent for the Comptroller's proposition.

On this point we may remind the reader that we have seen that even with a note issue of 4 to 1 of reserve, there would be no more profit than on a regular deposit currency. What banker will impound gold for the sake of issuing notes at a paltry increase of a quarter to a half when he can use his gold as the foundation of a deposit currency at least three times greater than his reserve?

To further discredit the proposal, it is provided that each bank shall pay five per cent. of its uncovered notes into a safety fund which fund shall be maintained by a tax on such circulation.

It is enough to say that banks in the United States will not generally do business except for the greatest profit, and will not put out any taxed issues. In fact they do not now find profit in issues founded upon bonds themselves bearing interest to be added to the profits of the notes issued. American bankers could not follow the example of the Imperial Bank of Germany in issuing notes subject to tax. The situation is different. The Imperial Bank has a monopoly of note issues and in fact is obliged by the conditions to make issues as a part of the Government scheme of currency.

To cap the climax the Comptroller hints at a compulsory redemption of these new notes by making every bank, receiving the notes of other banks, send them for redemption.

Again we say there would be no profits to pay the banks for the expense and trouble of this continual consignment of notes for redemption. Any method which should involve the forced consignment by every bank in the

United States of the issues of every other bank in the country, as soon as received by it, is wildly impracticable. It would keep the notes on the road to redemption rather than in circulation. In fact it would be a circulation of dead matter rather than of life-blood of commerce. Such stuff would clog up the circulation of the country and be the reverse of elastic.

Furthermore there are quite enough different kinds of money circulating in this country. It has been quite hard enough to get our people to believe the different currencies we use are really of uniform value. The issue of bank notes under restrictions as to redemption and subject to taxation would immediately put them under suspicion. They would not serve to give elasticity but would deaden the currents of circulation.

Of course, all that has been said against gold-reserve bank notes applies with greater vigor to any form of "asset currency." Gold as a reserve for bank notes is certainly better than general assets, and in that particular the Comptroller has improved on the scheme of other "sound currency" men. The proposition of the Comptroller furnishes a point from which to get a good view of the fallacies of the new soft money advocates. As to bank notes issued upon general assets it may be remarked that there is more experience recorded against any such scheme than against any financial heresy except bimetallism.

The technical and official details of the management of such a circulation as the Comptroller advocates would be very troublesome. Judged by the delays and red tape connected with the simple issue of the present National bank notes, most emergencies would be past before the notes necessary to relieve the situation could be gotten to the thousands of banks of the country. With constant redemptions and reissues it would be beyond ordinary official competence to prevent excessive issues and to insure that taxes were paid on the real amount of the circulation.

Bank notes are a kind of financial fetish. They have never been used to any really great extent that was profitable, except in the course of unsound and dishonest schemes which have soon run their course and ruined everybody concerned in them at their dissolution. The bank-note system in Europe is rapidly giving way to the deposit system as far as the real banking interest is concerned.

In a more general way, in the writer's book on "Money and Credit," p. 187, it is said:

"As to bank notes we have concluded that the banks have no interest in their continued issue. The issue of notes with modern safeguards has little of the elements of credit, none of the possibilities of profit afforded by all creations of credit, and has no part in the desired business of the progressive dealer in credit. He prefers to keep his gold as reserved capital for the issue of deposit currency, where it will give him four times as much banking power."

In this connection it may be said that the elasticity, to obtain which these schemes are devised, does not, and cannot, inhere in money of complete functions. Money has been developed as a medium of exchange, which is, at the same time, a denominator of prices and a storehouse of value and standard of deferred payments. It is plain that elasticity is logically impossible to all these qualities, except that of medium of exchange. Any instrument, therefore, which should perforce perform complete monetary

functions should not be made elastic, even if it were possible. Bank notes, if successful, must be complete money, used in retail trade and as a direct substitute for gold, the price denominator.

But the deposit currency composed of checks, bills, notes and other credit instruments, is only used as a medium of exchange; and it is only through it that elasticity can rightly be obtained. In fact the deposit currency is a perfectly elastic circulation. This currency is under the control of the banks, and can be made to fit the emergencies of all times. It is the duty and function of bankers to control the currency in the matter of elasticity. It is not a government function.

While elasticity is practically automatic in the deposit circulation, it cannot be imparted as a quality to any other form of currency to operate independently of a controlling intelligence. Indeed, that quality in the deposit currency, for its perfect work, needs the aid of constant intelligent financial control. The bank notes of the government banks of Europe are not automatic in operation. If the banks in the United States will use control equal to that used by the European banks in connection with their note circulation, our deposit circulation will answer all purposes of elasticity.

If the farmers want money for their crops rather than checks, it is a matter to be attended to by the bankers. The farmers want a regular form of money. Any special money provided for them would be looked upon with just suspicion. They will learn the use of checks as easy as they can be persuaded to use any new and unusual kind of currency. Farmers are using checks more and more, and the question of moving the crops is solving itself and attaining the right solution.

Stringency in crop-moving time is, no doubt, largely caused by the speculation that flourishes at that period. Materials for speculation are then coming into sight. Speculative farmers and country speculators, no mean factors in the financial markets, are then receiving the means of speculation.

One reason why the currency is not more elastic through the deposit system, is that speculation tends to push the capacity of the currency to the limit at all times and under all circumstances. When times are good speculation flourishes. When times are dull and discount rates are low speculation is encouraged by the easy loans upon which to carry its stocks or other material of speculation. But the banks can and must control speculation when necessary.

Finally, it is now an inopportune time to push currency schemes. The height of our period of prosperity has passed. Depression, in the natural order of things, must soon come. Many things point to a speedy turn in the tide. Too much permanent improvement, undigested securities, unduly high wages, unwholesome speculation in staples like cotton, wheat and corn, will bring on a period in which the banking interest will be fully occupied in the necessary contraction of credit, which will release plenty of money for all legitimate business.

No scheme has yet been devised for the automatic control of crises in industry. It is another problem for bankers. The banking interest has for many years been particularly successful in guarding against all sorts of crises and panics, whether in money, stocks or in general industry. It does not want any extra loads in the nature of wildcat bank notes when its next time of trial comes.

The sooner we come right down to the fact that the banking interest must exercise vigilant and intelligent supervision of such matters as the elasticity of the currency as well as the management of the credit system, the better it will be for everybody. The bankers, as the builders and owners of the credit structure, are alone capable of making it secure. In the management of credit is involved the elasticity of the currency as a minor incident. The whole thing, elasticity, crises, and all, is a matter for the banking interest. The Government and monetary enactments have no power in the matter, except for mischief.

WILBUR ALDRICH.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

FRAUD PRACTICED BY BANK CASHIER IN BORROWING MONEY FOR USE OF BANK—WHEN BANK LIABLE.

United States Circuit Court, District of Vermont, March 17, 1903.

HALLETT vs. FISH.

The Cashier of a bank borrowed money for his bank from a woman to whom he was engaged to be married, stating to her that the bank was in trouble, but not disclosing to her the true situation, which was that the capital was gone, and that the condition was caused by a defalcation.

Held, that whatever advantage the Cashier took of his relations to the lender was imputable to the bank, and that it was chargeable with his fraud.

WHEELER, D. J.: D. Henry Lewis was a director and the Cashier of this bank, which, partly through his mismanagement, had become insolvent and embarrassed, and this condition became known to the other officers, and an examination was being had April 9, 1901. The shortage was then supposed by them to be about \$35,000. The plaintiff was engaged to marry Lewis, was temporarily at Vergennes, and had stocks and bonds in a Savings bank at Concord, N. H. The shortage was principally at the National Bank of Redemption at Boston. A director provided \$10,000. Lewis applied to the plaintiff for \$25,000. She hesitated, but soon consented to furnish securities for that amount, to be pledged at the Bank of Redemption. She got them from the Savings bank, took them to Boston, and let Lewis take them to the Bank of Redemption, where a note of Lewis to that bank for \$25,000 was prepared, with a consent by her that he might pledge her securities for payment of the note, which she went and signed on April 11, and the amount of the note was credited to the Farmers' Bank. The shortage of the Farmers' Bank was found to be, by greater misapplications of Lewis than were supposed, and those of others, much larger than was expected, showing it to be hopelessly insolvent; and it was closed by the Comptroller of the Currency and put into liquidation on the 13th. The plaintiff paid the note of Lewis to the Bank of Redemption to save her securities, and has brought this suit to have the amount so paid decreed to her out of the assets. The defense is that the plaintiff dealt with Lewis solely, and has no just claim, or none but that of a common creditor, against the assets of the bank.

The plaintiff's securities have swelled the assets of the bank to the extent of \$25,000, without any advantage to her or loss to the bank; still, if she aided Lewis solely, and he the bank, she must look to him for her property,

and the bank was held only to him, however disastrous that may be to her

interests. This makes it necessary to see carefully how and on what inducements she parted with her securities. No one saw her about making the arrangement but Lewis, and no one else about carrying it out, but the Cashier of the Bank of Redemption; and what it was is to be ascertained from their testimony, and the circumstances shown by the testimony of others. Her testimony is consistent throughout, and does not differ materially from Lewis' as to the facts. That he has stated differently and that the securities were furnished to him, and by him to the bank, does not prove that the facts were as he is shown to have stated, but only affects the weight of his testimony in comparison between theirs as to the facts, and the evidence, if any, the other way. Their testimony is that he told her the bank was in trouble and must have immediate help, and there is no testimony that he told her that he was in distress and needed help, or that he was interested in procuring help, otherwise than through the bank. His testimony, although impeached by these contrary statements, for what value is left to it, corroborates hers, and there is nothing but the form of the papers taken by the Bank of Redemption to qualify hers. The paper required of her by that Cashier was this:

Boston, April 11, 1901.

"E. A. Presbrey, Esq., Cashier National Bank of Redemption, Boston, Mass.—Dear Sir: Whereas, D. H. Lewis, of Vergennes, Vermont, has given me stocks and securities satisfactory to me in exchange for the following-described stocks and bonds, to wit [Here follows an enumeration of the securities].

I hereby authorize the said Lewis to pledge all of the above-named securities as collateral to his note given this day to the National Bank of Redemption for the sum of \$25,000, dated April 11, 1901, payable on demand after thirty days' notice.

FRANCES PEARSON HALLETT."

The plan for using her securities was made, Lewis' note was executed, and this was prepared for her to sign after Lewis had taken her securities to the Bank of Redemption, and before she came; and, while it shows that she was dealing with Lewis, it does not show but that she was dealing with the Farmers' Bank through him, and authorizing the pledge of her securities for the benefit of that bank by him. The Cashier testifies that Lewis' note was of no importance in the transaction, and that it was discounted for the purpose only of having the proceeds go to the credit of the Farmers' Bank. This all shows that the loan of the securities was made to Lewis as Cashier (which was the office she understood he held) of the Farmers' Bank, and that it was induced by regard for Lewis, because help to the bank in its trouble would, as understood by her, be a favor to him. And she was not informed of the true situation of the bank, nor of its condition as the officers understood it, and she could not act on an equality with them. She was told that the bank was in trouble and needed money or securities immediately, but this did not mean to her what it would to experienced bankmen or trained financiers. She was not told that the capital was gone, and more, nor that the disaster was the result of defalcation and crime, which might reach much further. And she was peculiarly exposed to deception by her engagement to Lewis. But for that, she would not have been applied to for the loan, nor have complied.

In *Gilmore vs. Burch*, 7 Or. 374, the Court says:

"The influence of a man over a woman to whom he is engaged to be married is presumed to be so great that in transactions between them the court

will look with great vigilance at the circumstances and situation of the parties, and will not only consider the influence which the intended husband, either by soothing or violence, may have used, but require satisfactory evidence that it has not been used."

And Kerr on Injunctions, at page 47, says:

"The principle applies equally to the case of third persons who make themselves parties to transactions between persons filling a fiduciary position, and those towards whom they stand in such relation, or who take securities with notice that they have been obtained by a person filling a position of a fiduciary character, from a person towards whom he stood in such relation."

These are not new doctrines or principles in respect to dealings between those standing in confidential or overpowering relations to one another. They are as old as jurisprudence, as universal as equity, and as salutary now as ever.

Whatever advantage Lewis took of his relation to the plaintiff, the bank assumed in adopting his transaction. If the bank had used its assets to secure important creditors, or taken the money of depositors at the time and under the circumstances of taking the plaintiff's securities, without disclosing more than was made known to her, the assets taken out would have to be returned, to make all equal, and the deposits would not be drawn into the general wreck. It could no more bring assets of others, without full and fair disclosure, into, than it could save others already in from, the impending disaster, to shift the burden of losses. (*Roberts vs. Hill* [C. C.] 24 Fed. Rep. 571; *Wasson vs. Hawkins* [C. C.] 59 Fed. Rep. 233; 3 Am. and Eng. Encycl. of Law, "Banks and Banking" V [2d Ed.], 847.)

There was no inducement of others to act differently from what they would by what she did. It is a question of making her stand losses of others, already fixed, for nothing. It does not seem lawful or just that she should.

Decree for plaintiff for \$25,000 of the assets.

RIVAL CLAIMS TO DEPOSIT—ACTION REQUIRED OF BANK.

Court of Appeals at Kansas City, Missouri, May 25, 1908.

ARNOLD vs. SEDALIA NATIONAL BANK.

Where a bank with which money has been deposited is sued by another than the depositor for the funds, it should take some appropriate means to protect itself, such as depositing the money in court, and asking a decision as to the ownership.

A deposit of money in a bank does not create a bailment, but creates the relation of debtor and creditor.

Where money is deposited in a bank, and there is no contract to pay interest, and payment to the depositor is refused on demand, but subsequently the depositor withdraws the money deposited without interest, no interest can be afterwards recovered.

BROADBUSH, J.: This case originated before a justice of the peace, and on appeal to the circuit court, a trial by jury being waived, the Court found for the defendant, and plaintiff appealed.

The facts are as follows: On April 14, 1897, plaintiff deposited with defendant, a National bank, \$117 in the usual manner. Five days later plaintiff presented his check for the same amount, and demanded payment, which defendant refused. The ground upon which defendant withheld the fund from appellant was that a suit in equity had been instituted in the Pettis county

circuit court by one Barbara Ann Gard against plaintiff and defendant, in which suit it was alleged that the said \$117 was money borrowed by plaintiff, Arnold, and secured by deed of trust on certain real estate, and that Arnold had by fraud, duress, and undue influence obtained a deed from said Barbara Ann Gard to said real estate; and upon these allegations it was sought to set aside said deed and reinvest said Barbara Ann Gard with title to said real estate, and further prayed that defendant bank be ordered to bring into court all money in its hands received by Arnold as the proceeds of said loan. There was no order made during the pendency of said suit upon defendant to bring said money into court.

In October, 1897, said suit was tried, and the issues were found for plaintiff herein, Arnold. On appeal to the Supreme Court said judgment in said cause was affirmed. On July 12, 1900, said check, which had been transferred by plaintiff to H. T. Williams, plaintiff's then attorney, was presented to the defendant bank, and paid. This suit is for the sum of \$22.70, the amount of 6 per cent interest on said deposit of \$117 from date of such deposit. It was shown that at the time said Williams presented said check last mentioned he made no demand for interest, but that in a short time thereafter he returned to defendant bank, and made demand of it for damages for withholding the money.

The question presented by the case is whether the act of defendant in refusing to pay the money on deposit at plaintiff's order, under the circumstances, amounted to a conversion; and, if so, did the subsequent act of the plaintiff, through his attorney, Williams, in receiving the amount of the original deposit without demanding interest, operate to extinguish not only the original indebtedness, but interest also? The plaintiff has cited authority to show that a bailee who refuses to deliver the money on demand of the bailor is guilty of conversion, and the interest thereon for the time it is withheld is the measure of damages. (*Allgear vs. Walsh*, 24 Mo. App. 134; *Swallow vs. Duncan*, 18 Mo. App. 622.) Such is admitted by the respondent to be the law, but it denies that it has any application to this case. And appellant further insists that, if respondent was not estopped to question appellant's right to the money, it became liable by holding the money itself. Its only protection from damages would have been by depositing the money in court and obtaining an order upon both claimants to litigate for it.

In *Hathaway vs. Foy*, 40 Mo. 540, it was held that: "One of two parties claiming property in the hands of a third party cannot bring a suit in equity against the other claimant and the holder to have the rights of the parties determined as upon a bill of interpleader. A bill of interpleader lies only when the party holding the property asserts no interest therein, and is threatened with suits by different persons claiming the same property." (See, also, *Arn vs. Arn*, 81 Mo. App. 133.)

It was the duty of defendant, when it ascertained that there were rival claimants for the funds, and after it had been in fact sued for the amount, to have taken some appropriate means to protect itself. It could have deposited the money in court, and asked the court to say to which one it belonged. But this it did not do, but kept the money presumably for its own use; and it should not be allowed to escape a responsibility which it assumed by holding the fund.

We have considered this case upon the theory of the plaintiff that the transaction was a bailment. In our opinion, when plaintiff deposited the \$117 with the defendant bank, the transaction became one of debtor and creditor, and not a bailment. (*State vs. Reid*, 125 Mo. 43, 28 S. W. 172; *McKee vs. Bank*, 74 Mo. App. 281.) But, in any view of the case, the judgment will have to be affirmed under the rule of law that, where there is no contract to pay interest, interest is strictly incidental to the debt, and cannot exist after the debt is discharged. (*Stone vs. Bennett*, 8 Mo. 42; *Graves vs. Saline County*, 104 Fed. 61, 43 C. C. A. 414; *Sedgwick on Dam.* § 338; 1 *Sutherland on Dam.* 677.)

Affirmed. All concur.

MONEY DEPOSITED BY ATTORNEY—BANK NOT CHARGED WITH TRUST.

Court of Appeals at St. Louis, Missouri, March 17, 1903.

RHEINHARDT vs. NEW MADRID BANKING CO.

Where an attorney who has collected money for his client deposits it in bank, the trust relationship does not pass over to or charge the bank as trustee for the client in respect to the money so deposited.

Robert Rutledge, an attorney-at-law, prosecuted a suit for the plaintiff, and recovered a judgment in her favor for \$2,142.35, which amount he collected and deposited in the defendant bank to his individual credit. Afterwards he gave a check to plaintiff against the deposit for \$1,792.35, which plaintiff presented to the bank, and had cashed. At the time she cashed the check she notified the Cashier that there was yet \$117 of the money deposited by Rutledge due to her, and that Rutledge had overcharged her that amount as attorney's fee. The \$350, the balance of the judgment collected by Rutledge and remaining to his credit in the bank, he claimed for fee for his services, and to reimburse him for money he had paid out as expenses in prosecuting the plaintiff's lawsuit.

This suit was brought against both the bank and Rutledge. A demurrer was interposed to the petition by defendants on the ground that the petition failed to state any cause of action and that there was a misjoinder of parties defendant. Plaintiff thereupon dismissed her suit as to Rutledge, and the demurrer was overruled as to the bank. The bank filed an answer denying generally the allegations of the petition. The issues were submitted to the court, who gave plaintiff judgment, whereupon defendant appealed.

BLAND, P.J.: An attorney of record who prosecutes a suit to judgment for his client has authority to receive the money due on the judgment. (*Acoc's Adm'r vs. McBroom*, 38 Mo. 342; *Carroll County vs. Cheatham, et al.* 48 Mo. 385.) The depositing of the money by Rutledge in the bank created the relation of debtor and creditor between him and the bank (*Paul vs. Draper*, 73 Mo. App. 566), and it was no concern of the bank's that Rutledge had collected the money as attorney to plaintiff. His trust relation to the plaintiff did not pass over to nor charge the bank as trustee of the plaintiff in respect to the money deposited by Rutledge. Plaintiff, by a proper suit in equity, might have stopped the money in the hands of the bank, and subjected it to her claim, and recovered the fund itself. But there was no contractual relation, in respect to the money, between her and the bank, and she was not entitled to a money judgment in her suit at law against the bank.

The judgment is reversed. All concur.

EFFECT OF INDORSEMENT—WARRANTY OF PRIOR INDORSEMENT.

Supreme Court of Ohio, March 2, 1903.

FIRST NATIONAL BANK OF MT. VERNON, OHIO vs. FIRST NATIONAL BANK OF LINCOLN, ILLINOIS.

One who indorses and delivers a negotiable promissory note in the usual course of business, thereby undertakes that the signatures of all prior indorser are genuine.

In an action brought upon that undertaking by an indorsee to recover the amount which he has been adjudged to pay in consequence of the forgery of the signature of a prior indorser, the plaintiff having given to the defendant timely notice of the pendency of the suit in which such judgment was recovered, and an opportunity to defend, such former judgment is conclusive with respect to the forgery.

(Syllabus by the Court.)

On March 1, 1897, one Frank Frorer executed his negotiable promissory note of that date for the sum of \$2,056, payable to the order of Mrs. C. A. Rowley and F. S. Rowley, her husband, at the First National Bank of Lincoln, Ill. The note came into the possession of the Lincoln bank indorsed: "C. A. Rowley," "F. S. Rowley," "Jerome Rowley," "Pay First National Bank, Lincoln, Illinois, or order. First National Bank Mt. Vernon, Ohio. Fred. E. Sturges, Pres." The signature of Mrs. C. A. Rowley as an indorser of the note was forged.

The Lincoln bank received the note in the due course of business, and, relying upon the genuineness of all the signatures appearing upon the note, presented the same to the maker for payment, and the amount of the note was paid to it by the maker, and by it to the Mt. Vernon bank. Mrs. Rowley thereupon brought suit in the circuit court of Logan county, Ill., against the maker of said note, to compel him to pay to her one-half of said note, she alleging that her signature as indorser of the note was forged, and that she had never received any part of the one-half of the proceeds of said note which belonged to her. She recovered a judgment for the amount claimed. Thereupon the maker of said note, relying upon the warranty of the Lincoln bank that Mrs. Rowley's signature as indorser was genuine, notified it in writing of the said forgery, and demanded that it repay to him the amount of Mrs. Rowley's judgment.

The Lincoln bank thereupon notified the Mt. Vernon bank of that demand, and notified it further that it would require the Mt. Vernon bank to protect the plaintiff, and make good any sum that it might have to pay the maker of said note upon his said demand. The Mt. Vernon bank refused to pay the amount demanded either to the plaintiff or to the maker of the note, and the Lincoln bank refused to pay to the maker the sum demanded by him, and thereupon the maker, Frorer, brought suit against the Lincoln bank to recover the amount which he had been adjudged to pay to Mrs. Rowley.

The Lincoln bank gave notice to the Mt. Vernon bank of the bringing of said suit, furnishing it a copy of the declaration therein, and requesting it to appear and make such defense as it might desire in view of its liability to the Lincoln bank by reason of its warranty that the signatures were genuine; and afterward the Lincoln bank gave to the Mt. Vernon bank timely notice of the day upon which said cause was set for trial; but the Mt. Vernon bank made no defense to said action, nor did it render any assistance in the defense. A judgment against the Lincoln bank was recovered by the

maker of the note for the sum of \$1,166.81 and costs of suit, and the prayer of the present petition is that the Lincoln bank may recover that amount from the Mt. Vernon bank.

The Mt. Vernon bank answered the petition of the plaintiff, the material portion of its answer being: "The defendant denies that the indorsement of the name of C. A. Rowley on the back of said note was a forgery. On the contrary, it avers that said indorsement was the true and genuine signature of said C. A. Rowley." To this answer the Lincoln bank demurred. The demurrer was sustained, and the defendant not desiring to answer over, a judgment was rendered in favor of the Lincoln bank for the amount which it claimed.

SHAUCK, J.: Counsel for the plaintiff in error urge two propositions, either of which, if sound, would require a reversal of the judgment of the circuit court. The first is that the indorsement of the Mt. Vernon bank, though unconditional and unrestricted, did not import a warranty of the genuineness of the signature of the prior indorser, Mrs. Rowley. It is elementary that one who, even by mere delivery, transfers a note payable to bearer thereby undertakes that all signatures upon the note are genuine, and that all whose names appear had legal capacity to enter into the contract indicated. Certainly, the legal import of a transfer by indorsement and delivery cannot be less. (*Dumont vs. Williamson*, 18 Ohio St. 515; *Bank vs. Bank*, 58 Ohio St. 207.)

The second proposition of counsel for the plaintiff in error is that it is not precluded by *Frorer's* judgment against the Lincoln bank from asserting any defense which might have been originally interposed against the claim founded upon the alleged forgery of Mrs. Rowley's signature. The pertinency of this proposition is manifest in view of the allegation in the answer that Mrs. Rowley's signature is genuine. The view urged in support of the judgment of the circuit court is that, although the Mt. Vernon bank was not in fact a party to the record in which *Frorer* recovered judgment against the Lincoln bank, nevertheless, because of the notice given to it by that bank informing it of the bringing of said suit, and requiring it, as the party liable over to the defendant therein, to appear and interpose such defense as it might have, it is precluded from asserting such defense now.

In *Commissioners of Brown Co. vs. Butt*, 2 Ohio, 348, it was decided that a sheriff against whom a liability had been adjudged for permitting the escape of a prisoner might have an action over against the commissioners of the county for failing to provide a jail wherein the prisoner could be securely kept, and that in an action brought by him against the commissioners of the county the measure of damages should be the amount of the judgment which had been recovered against him. In a dissenting opinion the correctness of the judgment was denied upon the ground that under the statute then in force the county was not liable over to the sheriff. The case was overruled in the *Commissioners vs. Mighels*, 7 Ohio St. 109, upon the ground taken in the dissenting opinion, but the doctrine of the case as to the effect of a former suit in an action against one liable over does not appear to have been questioned.

In *Miller vs. Rhoades*, 20 Ohio St. 494, an action upon a bond given by a creditor to indemnify an officer for the sale of property held by him upon execution, but claimed by another—a judgment having been recovered

against the officer, it was held that "the creditor having due notice of the action, and an opportunity to defend against it, the judgment is conclusive evidence against the obligor of the amount of damages sustained." We have become familiar with the application of this doctrine to one who is liable over to another on a warranty of title to land, it being accepted as the established law that the warrantee may charge the warrantor with the consequences of an action to evict by giving him timely notice of the suit, with an offer of opportunity to defend. It is an extension of the doctrine that all who are parties to a judicial record are bound by the judgment, and it rests upon the same foundation—the necessity that there be an end of litigation. It was placed upon that ground in *Robbins vs. City of Chicago*, 4 Wall. 657, where it was decided that a municipality which had been adjudged liable to one injured in consequence of the dangerous condition of its street might recover the amount of the judgment from the owner of abutting property by whom the dangerous condition had been created, such owner having had actual, though informal, notice of the pendency of the suit against it. The reason for the doctrine does not suggest that there should be any limit to its application because of the nature of the obligation over of the person notified.

Upon examination of numerous decisions in other States and in the Federal courts, it appears that the doctrine is of general application, without regard to the nature of the liability over of the person notified, whether it arises out of contract or by operation of law. Many cases illustrative of the varied application of the doctrine are collected in *Black on Judgments*, § 574, and *Bigelow on Estoppel*, p. 131. They seem to recognize no exception to the rule that in an action to recover from one liable over on account of a demand upon which there has been a judgment against the plaintiff, the defendant is bound by such judgment if he had due notice of the suit in which it was rendered, and an opportunity to defend.

Some differences of opinion appear with respect to the character of the notice which should be given to the person liable over, but none of the cases casts any doubt upon the sufficiency of such full notice and opportunity to defend as are set out in the untraversed allegations of the original petition in the present case.

Judgment affirmed.

Burket, C. J., and Spear, Davis, Price, and Crew, JJ., concur.

ACCOMMODATION NOTE—BONA FIDE HOLDER—DISCOUNT.

Court of Appeals of Maryland, January 22, 1903.

BLACK vs. FIRST NATIONAL BANK OF WESTMINSTER.

To constitute notice of an infirmity in the instrument or defect in the title of the person negotiating the same, the person to whom it is negotiated must have had actual knowledge of the infirmity or defect, or knowledge of such facts that his action in taking the instrument amounted to bad faith.

In a suit upon a promissory note it is no defense that the note was known to be an accommodation note between the maker and the payee, provided the holder took it for value, *bona fide*, before it was due.

To "discount paper," as understood in the business of banking, is only a mode of loaning money, by taking the interest in advance.

This suit was brought by the First National Bank, of Westminster, to recover from Levi Black the amount due upon two negotiable promissory

notes, for \$100 each, made by him, and payable to the order of the United Milk Producers' Association.

PEARCE, J. (omitting part of the opinion): The first question is presented by the ruling of the demurrer. As to the eighth and ninth pleas, there is no averment in either that the plaintiff took the notes with knowledge of the fraud charged in one, or of the breach of faith charged in the other, and there was therefore no error in the ruling as to these pleas. (*Banks vs. McCosker*, 82 Md. 518, Code, Art. 13, § 75.)

The tenth plea does not aver that the agreement set out therein was in writing. In *McSherry vs. Brooks*, 46 Md. 118, prayers were rejected which sought to defeat recovery by an indorsee upon promissory notes because of an alleged parol promise by the payee to keep the notes in his possession and not pass them away; the Court saying, "This would seem to be contrary to all principle and authority," and that it was not competent "to destroy their legal import and operation by the introduction of parol evidence that the notes were not to be negotiated, notwithstanding the negotiable terms employed on their face."

But it is not necessary, as was contended by the appellee, to allege in the declaration that the promise is in writing. If it appear in proof at the trial to be in writing, it is sufficient for its admission. (*Ecker vs. Bohn*, 45 Md. 285; *Horner vs. Frazier*, 65 Md. 1.)

But if in writing, that could not avail in this case, since this plea expressly alleges the execution and delivery of the notes by the defendant to the association, and section 43 of article 13 of the Code provides that every negotiable instrument is deemed, *prima facie*, to have been issued for a valuable consideration, and every person whose signature appears thereon to have become a party for value; and section 45 provides that, where value has at any time been given for the instrument, the holder is deemed a holder for value in respect to all parties who become such prior to that time. But apart from these considerations, the plea states a case which does not disentitle the plaintiff to recover, since it alleges that the notes were delivered by the association to the Old Town Bank "as collateral security for advances to be made by it to the association"; and in *Maitland vs. The Citizens' Bank*, 40 Md. 562, it is said that "every person is within the rule, and entitled to the protection of a *bona fide* holder for value, who has received the note in payment of a precedent debt, or has taken it as collateral security for a precedent debt, or for future as well as past advances."

The Old Town Bank, therefore, as well as the plaintiff, is presumed to be a holder for value; and in *Cover vs. Myers*, 75 Md. 419, the Court said: "Where a negotiable instrument is originally infected with fraud, invalidity, or illegality, the title of the original holder being destroyed, the title of every subsequent holder which reposes on that foundation, and no other, falls with it. But if any subsequent holder takes the instrument, in good faith and for value, before maturity, he is entitled to recover on it, and so any person taking title under him may recover, notwithstanding such latter holder may have knowledge of the infirmities of the instrument; and all that is required of the holder in such case is that it be proved that he, or some preceding holder or indorsee, under whom he claims, acquired title to the paper before maturity, *bona fide*, and for value." And this view of the law has since been formulated in section 77 of article 13.

We find no error, therefore, in the ruling as to this plea. The only difference between the tenth and eleventh pleas is that the latter alleges these notes were given to the association for its accommodation, and that this fact was known to the plaintiff. But this does not alter the case, nor destroy the negotiability, in fact, of paper which was made negotiable in form for the accommodation of the party receiving it, for, as was said in *Maitland vs. Citizens' Bank*, *supra*: "The result of all the well-considered cases upon the subject is that it is no defense that the note sued on was known to be an accommodation note between the maker and the payee, provided the plaintiff took the note for value, *bona fide*, before it was due. The reason is, as stated by Mr. Justice Story, that the very object of any accommodation note is to enable the party accommodated, by sale or negotiation, to obtain a free credit and circulation of the note; and this object would be wholly frustrated unless the purchaser, or other holder for value, could hold such a note by as firm and valid a title as if it were founded in a real business transaction." And section 48 of article 13 of the Code declares that: "An accommodation party is one who has signed the instrument as maker, drawer, acceptor or indorser, without receiving value therefor, and for the purpose of lending his name to some other person. Such a party is liable on the instrument to a holder for value, notwithstanding such holder, at the time of taking the instrument, knew him to be only an accommodation party."

It is obvious from the above language of the Code, and from that of *Maitland's Case*, that an accommodation note, taken for value and before maturity, is taken *bona fide*; and what we have said respecting the tenth plea is equally applicable to the eleventh plea. The twelfth plea is based upon the alleged executory agreement between the defendant and the association, which is sufficiently stated in the earlier part of this opinion. The plea avers knowledge by the plaintiff of the terms of this agreement when the notes were taken, but containing no averment of breach and notice of breach before the plaintiff took the notes, and parted with its money on their faith and credit.

Upon principle, it would seem that this must constitute a fatal defect in the plea, and the authorities sustain this view. The rule is stated thus in *U. S. Nat. Bank vs. Floss* (Or.) 62 Pac. 751: "The breach of an executory agreement which forms the consideration of a negotiable note is not a defense in whole or in part, against an indorsee who took the note for value, before maturity, even if he had notice of the contract, unless he was also informed of the breach before its purchase."

In *Davis vs. McCready*, 17 N. Y. 233, the reasons upon which this rule rests are well stated in an opinion by Judge Denio. In that case the consideration for the acceptance of a bill of exchange was the sale of a brig, accompanied by an executory agreement of the vendor to make such repairs as would render her seaworthy. The defense was that this agreement had not been performed, but the Court said: "The plaintiffs were not bound to follow up the transactions between the original parties to the bill. To hold otherwise would attach an inconvenient and repugnant condition to such an acceptance. By accepting, simply and unconditionally, a negotiable bill, the defendants are to be held as intending to give it all the qualities of commercial paper, one of which is that it shall circulate freely for the pur-

poses of business, and be available in the hands of any holder for value. To decide that one who proposed to purchase it, and who had a knowledge of the transaction upon which it was given, must await the consummation of that transaction, would essentially impair its character and legal effect." So in *Arthurs vs. Hart*, 17 How. 6, the Supreme Court of the United States said: "It is true, the plaintiffs knew at the time they took the paper that it was given as part of the price of a sugar-mill, and that the mill had been defectively constructed; but they also knew that the defendant, upon the promise of the builders to make the necessary repairs, had agreed to accept the bill unconditionally, and had accepted it accordingly. They knew, therefore, that he looked to this undertaking for indemnity, and not to any conditional liability upon the acceptance; and the transaction which is brought home to the plaintiff lays no foundation, in law or equity, to impeach the paper in their hands." We are of opinion, therefore, that the demurrer was correctly overruled, as to all the pleas to which it was addressed.

* * * * *

The defendant's second, third, fourth and fifth prayers are all based upon the theory that there was evidence proper to be submitted to the jury to show that the \$5,000 note and the two notes sued on were sold to, and were not discounted by, the plaintiff; that such purchase was not within the corporate powers of the plaintiff; and that such defense was open to defendant, and precluded recovery by the plaintiff. But we do not find that there is any legally sufficient evidence that the transaction was a sale, and the plaintiff specially excepted to all these prayers on that ground.

In *Lazear vs. Union Bank*, 52 Md. 78, there was such evidence. The Court says on page 124, 52 Md.: "The evidence shows that Winchester & Son, note and bill brokers, were employed by Lazear Bros. to sell the note of June 22, 1872, to any purchasers willing to buy, and that it was sold to the appellee, over the counter of its banking-house, at nine per cent. discount, for Lazear Bros., the drawers, who received the proceeds of sale." Here the evidence of the plaintiff's Cashier, Gehr, who was put upon the stand by the defendant, is that the \$5,000 note was discounted (the note sued on being shown to be among the collateral given therefor), and that the amount of the discount was the legal rate for ninety-one days—the time that the note ran. "To 'discount paper,' as understood in the business of banking, is only a mode of loaning money, with the right of taking the interest allowed by law in advance." (Vol. 2 [2d Ed.] *Amer. & Eng. Enc. of Law*, p. 469.)

This term has been defined by this court, in almost the same exact language, in *Weckler vs. First Nat. Bank*, 42 Md. 592, where Judge Miller says: "The ordinary meaning of the term 'to discount' is to take interest in advance, and, in banking, is a mode of loaning money. It is the advance of money not due till some future period, less the interest which would be due thereon when payable." Only the legal rate of interest would be due on the principal when payable, and thus Judge Miller's definition of the term is shown to be the same as that given above. If the legal rate were exceeded, a presumption might arise that the parties intended or the law implied a sale, rather than a discount, because a sale (between ordinary parties, at least) would be legal at any rate of deduction agreed on; but, where a bank dis-

counts paper at a rate exceeding that allowed by law, the transaction would be within the usury law.

Being of opinion that there is in this case no legally sufficient evidence to show a purchase of these notes, or of the \$5,000 note, we have no occasion to consider the conflict between the decision in Lazear's Case and those decisions of the United States Supreme Court, upon section 5136 of the National Banking Act (U. S. Comp. St. 1901, p. 3456), in *Nat. Bank vs. Matthews*, 98 U. S. 626, and *Nat. Bank vs. Whitney*, 103 U. S. 99, cited with apparent approval in *Heironimus vs. Sweeney*, 83 Md. 160, in an opinion concurred in by the full bench, as well as the later case of *Nat. Gloversville Bank vs. Johnson*, 104 U. S. 271.

In the still more recent case of *Danforth vs. The Nat. State Bank*, 1 C. C. A. 62, 48 Fed. 271, it was held that cases could not be distinguished, where the title to the paper is transferred by an indorsement imposing the ordinary liability upon the indorser, from those where it is transferred by indorsement without recourse, or by mere delivery.

In *United German Bank vs. Katz*, 57 Md. 141, this court reviewed the case of *Lazear vs. Nat. Union Bank*, *supra*, and distinguished it from the case before them; holding that the doctrine of *ultra vires* is not applicable to executed contracts, which the Court said, "by the plainest rule of good faith, should be permitted to stand." In that case it was held that the United German Bank had no authority to discount promissory notes, but the Court said: "It does not follow, as a consequence of this view, that, because the appellant exceeded its legitimate powers in procuring this note by discounting the same, recovery cannot be had. If he received the plaintiff's money, or was the knowing instrument of some one else doing so, he ought not to escape liability to pay on that ground. * * * Whether he received the money personally, or not, is immaterial, if by his procurement some one else did get the money upon the faith of what he did. It was all one transaction." So in the case before us the First National Bank of Westminster is supposed to have parted with its money upon the faith not only of the principal note of \$5,000, but also of the other notes put up as collateral. "The two, as elements of the consideration, are inseparable. The courts will not inquire whether the holder parted with value because of the original or collateral paper. They consider such value given for both." (*Bank of State of N. Y. vs. Vanderhorst*, 32 N. Y. 553; *Norton on Bills and Notes* [3d Ed.] 314, 315.) Being thus an executed contract, even if the transaction were a sale, and not a discount, recovery could be had under the *Katz Case*, *supra*, which was held not to be in conflict with *Lazear's Case*.

*COLLATERALS PLEDGED WITH NATIONAL BANK—WHEN ULTRA VIRES
NO DEFENCE.*

Supreme Court of Nebraska, May 22, 1901.*

UNION NATIONAL BANK OF CHICAGO vs. TOUZALIN IMP. CO., *et al.*

Where a borrower has deposited collateral securities with a National bank, he cannot set up as a defence that the bank had no power to take the same.

The defendant Reynolds borrowed money of the plaintiff in Chicago, Ill., upon his notes, and pledged shares of the capital stock of the Touzalin

* This case was withheld from publication by order of the court.

Improvement Company as collateral security. The contract was in writing, and gave the bank, in event of default in payment, power "to sell said collateral securities, or any portion thereof, at public or private sale, at the discretion of said bank, without advertising the same or otherwise giving notice; and the said bank may become the purchaser at any public sale, and the said bank shall apply the proceeds," etc. Afterwards, the notes being long past due, the bank proceeded under the above power, and foreclosed the pledge by advertisement and public sale. The stock was bought in for the bank, and afterwards assigned to the bank under a power of attorney given by Reynolds at the time of pledging the stock.

A demand was duly made for a transfer of the stock on the books of the company, which was refused; whereupon this action was brought to compel a transfer of the stock, and to enjoin the defendant Reynolds from voting the stock at stockholders' meeting.

SEDGWICK, C. (omitting part of the opinion): It is next insisted that the plaintiff, being a National bank, could not, under its charter, take such securities; but we are not aware of any provisions of the National Banking Law that are violated by taking such securities as these. At all events, the Government is not complaining, and appellants cannot avoid their contract upon such grounds.

*PARTNERSHIP ACCOUNT—INDIVIDUAL DEBT OF ONE OF THE PARTNERS—
SMT OFF.*

Supreme Court of California, May 22, 1903.

WILLEY vs. CROCKER-WOOLWORTH NATIONAL BANK OF SAN FRANCISCO.

A bank may not charge against the deposit of a firm the past-due note of one of the partners held by it.

A bank which has received a deposit for a firm account cannot set up that one of the members of the firm (in this case a corporation) had no power to become such.

A. B. Perry & Co., a copartnership composed of Alvan B. Perry and W. P. Fuller & Co., a corporation, did their banking business with defendant, a banking corporation, and had a deposit with the defendant. On February 14, 1899, the copartnership had on deposit with the defendant the sum of \$1,720.64. On February 16, 1899, Alvan B. Perry died, leaving W. P. Fuller & Co. as the sole surviving partner. After the death of Perry, W. P. Fuller & Co. presented a check, properly drawn, to the defendant, and demanded payment, but payment was refused. Defendant attempted to justify its refusal to pay upon the following facts: A. B. Perry & Co. had their account and did their banking business with the Tallant Banking Company from August 4, 1897, up to November 28, 1898, but Alvan B. Perry had no personal account with the banking company.

On August 4, 1897, Alvan B. Perry, individually, borrowed from the Tallant Banking Company the sum of \$1,600, giving his personal note therefor, payable ninety days after that date, which transaction was entered in their books and carried forward in a separate account of Alvan B. Perry under and as bills receivable. On November 12, 1898, the Tallant Banking Company transferred to defendant certain of its assets, including this note, and thereupon defendant assumed certain liabilities of the Tallant Banking Company, including the liability for the deposit to the credit of A. B. Perry &

Co. The deposit account was thereafter kept by defendant with A. B. Perry & Co., but Alvan B. Perry had no individual deposit account with defendant at any time. After the transfer by the Tallant Banking Company to defendant, it sent notices of interest due on the note to Alvan B. Perry, and the interest was paid by Perry from time to time. After the transfer of the account to defendants, it gave to A. B. Perry & Co. a passbook inscribed "A. B. Perry & Co.," and the account was so kept on defendant's books, and it dealt with the copartnership as such—received its deposits and honored its checks—without prosecuting any inquiry as to who were the members constituting such copartnership.

On February 16, 1899, the day of Alvan B. Perry's death, and without any authority or request from Alvan B. Perry or from A. B. Perry & Co., defendant charged up to the account of A. B. Perry & Co. the sum of \$1,604.96, being the amount due upon the note. Defendant claimed that it had the right to pay the note from the amount due on the account of A. B. Perry & Co., for the reason that it did not know that any one other than Alvan B. Perry was a member of or interested in the firm, and for the further reason that the corporation of W. P. Fuller & Co. could not legally enter into a copartnership with an individual, and that for this reason there was no copartnership.

PER CURIAM (omitting part of the opinion): If the money on deposit in the name of A. B. Perry & Co. belonged to a copartnership doing business under the name and style of A. B. Perry & Co., it is clear that defendant had no right to appropriate the deposit for the purpose of paying the individual indebtedness of A. B. Perry. It had made the loan to Perry individually, and had taken his unsecured note for the amount. It knew that it had two different names on its books, and that one, at least apparently, was that of a firm or association of individuals. The words "A. B. Perry & Co." were sufficient, upon their face, to put defendant upon inquiry. And that the defendant knew it was dealing with a different person from Alvan B. Perry further appears from the fact that in November, 1898, it loaned the sum of \$3,000 to and took the note of A. B. Perry & Co. for the amount. This note was paid by A. B. Perry & Co., and not by Alvan B. Perry. Defendant had no agreement whereby it had any lien or claim on the funds of A. B. Perry & Co. It received the deposit under that name. It cannot, of its own volition, repudiate the obligation by showing that the name was that of something having no legal existence. It is not necessary to decide the question as to whether or not a corporation can legally enter into a copartnership. It will be sufficient to decide that question when it is properly raised by some one who is interested and who has the right to raise it. There is no doubt, in case this suit had been brought by the copartnership during the lifetime of Perry, the defendant would have been estopped from denying that it was a copartnership. Defendant, having voluntarily treated it as such for the purpose of receiving its deposits and business, will be compelled to treat it as such for purpose of repaying such deposits. Defendant's attorneys, in their closing brief, very frankly and fairly admit this proposition, and say: "If Perry were alive, and had joined with W. P. Fuller & Co. as plaintiff, or had joined in an assignment of this claim, we frankly and fully admit that the question as to the power of this corporation to enter into a copartnership would not be before the court." And such was the ruling of this court in

Yancy vs. Morton, 94 Cal. 561, where it was held that the owner of a building was estopped from setting up the illegality of the formation of a partnership by two corporations which furnished materials for the building, in an action to foreclose a lien therefor by an assignee of the partnership.

The defendant was therefore estopped during the lifetime of Perry from making any such defense as it is attempting to make here. It was so estopped at the time it made the transfer of the partnership account to the payment of the note of Alvan B. Perry. Then the question arises as to whether or not such estoppel continued after the death of Perry, and as to his surviving partner. The heirs and administrators of Perry succeed to his rights, and therefore are in privity with him. (*Bigelow on Estoppel* [5th Ed.] pp. 148, 347.) In such case the estoppel applies to the privies in estate. (*Id.* pp. 142, 143.) The corporation of W. P. Fuller & Co. was in fact a copartner, whether it was so in a legal sense or not. It had acted as such. Perry, in his lifetime, by express agreement, had made it such. He was estopped by his agreement from denying that it was such. Defendant had, by its conduct, treated it as such. Therefore when Perry died the corporation was a surviving partner in fact. Whether it was so legally or otherwise, it certainly was so as a matter of fact. As such surviving partner, Code Civ. Proc. § 1585, gave it the right "to continue in possession of the partnership, and to settle its business * * * and account with the executor or administrator, and pay over such balances as may from time to time be payable to him in right of the decedent." The estoppel continued after the death of Perry as to his heirs and legal representatives, as to the condition of affairs that had been brought about by the surviving partner, and to any balance that might be due deceased from the assets of the copartnership.

UNSTAMPED NOTE—WHEN NOT VOID.

Supreme Judicial Court of Massachusetts, June 17, 1903.

ROWE vs. BOWMAN.

The provisions of the War Revenue Law forbidding unstamped instruments to be received in evidence applied only to the Federal courts.

The provision of such law declaring unstamped instruments to be invalid applied only to cases where the stamp had been fraudulently omitted.

This was an action upon a promissory note signed by the defendant and another.

LORING, J. (omitting part of the opinion): The other two exceptions relate to the fact that there was no revenue stamp on the note in suit when it was delivered to the plaintiff, as required by act June 13, 1898, c. 448, § 6, Schedule A, 30 Stat. 448, 451 (U. S. Comp. St. 1901, p. 2291), and that the plaintiff subsequently affixed the proper stamp to the note, and canceled it in the defendant's name. His request was that the judge should rule, as matter of law, that this constituted a material alteration of the note, and that the note should be ruled out, as inadmissible evidence.

The second of these two exceptions is covered by the previous decisions of this court in *Carpenter vs. Snelling*, 97 Mass. 452; *Green vs. Holway*, 101 Mass. 243. Under those decisions, act June 13, 1898, c. 448, §§ 7, 14, 30 Stat. 452, 455 (U. S. Comp. St. 1901, pp. 2292, 2297), forbidding unstamped instru-

ments from being admitted in evidence, must be confined to courts of the United States.

The first of these two exceptions must also be overruled. The note was not invalid before the stamp was annexed. It was decided by this court, after great deliberation, that act July 13, 1866, c. 184, § 9, 14 Stat. 101, declaring unstamped instruments to be invalid, applied only to instruments where the stamp had been fraudulently omitted. (*Green vs. Holway*, 101 Mass. 243; *Moore vs. Quirk*, 105 Mass. 49, 7 Am. Rep. 499.) And the Supreme Court of the United States reached the same conclusion. (*Campbell vs. Wilcox*, 10 Wall. 421, 19 L. Ed. 973.) The act in question, act June 13, 1898, c. 448, § 13 (30 Stat. 454 [U. S. Comp. St. 1901, p. 2294]), so far as the question of the validity of unstamped instruments is concerned, is the same as act July 13, 1866, c. 184, § 9; and the decision in *Green vs. Holway*, 101 Mass. 243, and the reasons given for it, are applicable here.

It was held in *Green vs. Holway*, 101 Mass. 243, 251, that the burden of proving a fraudulent intent is on the person who asserts it. As there was no evidence in the case at bar that the note was originally left unstamped with intent to defraud, the note here in question must be taken to be a valid note.

In our opinion, the question whether there was or was not a material alteration of this note, which was made in Massachusetts, and apparently was to be paid in Massachusetts, must be determined by the laws administered in the courts of Massachusetts. (*Fuller vs. Green*, 64 Wis. 159.) As the note was admissible in Massachusetts courts without a stamp, annexing a stamp was not a material alteration of the note, within Rev. Laws, c. 73, § 142.

Exceptions overruled.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B.; Barrister, Toronto.]

PRINCIPAL AND AGENT—BANK OF ENGLAND—TRANSFER OF STOCK—POWER OF ATTORNEY—IMPERIAL WARRANTY OF AUTHORITY—INNOCENT MISREPRESENTATION—FORGED POWER—LIABILITY OF AGENT.

STARKY vs. BANK OF ENGLAND (1903 Appeal Cases, P. 114).

The principle of *Collen vs. Wright* (1857) 8 E. & B. 647, 657, is not confined to cases where the transaction with the person representing himself to be an agent results in a contract.

A broker applied to the Bank of England for a power of attorney for the sale of consols, believing himself to be instructed by the stockholder, and *bona fide* induced the bank to transfer the consols to a purchaser upon a power of attorney to which the stockholder's signature was forged.

Held, that the broker must be taken to have given an implied warranty that he had authority, and that he was, therefore, liable to indemnify the bank against the claim of the stockholder for restitution.

Decisions of *Kekewich, J.* (1901) 1 Ch. 652, and the Court of Appeal reported as *Oliver vs. Bank of England* (1902) 1 Ch. 610, affirmed.

STATEMENT OF FACTS: In December, 1897, a sum of consols was standing in the joint names of F. W. Oliver and his brother Edgar in trust for others. F. W. Oliver wrote to a firm of stock brokers, of which the appel-

lant was a member, inclosing an application to the Bank of England to issue a power of attorney from F. W. and Edgar Oliver to the appellant and his partner to transfer the consols, and requesting the brokers to lodge the application with the bank. The appellant having lodged it, the bank issued to the brokers a power of attorney to sell and transfer, and sent notices to F. W. and Edgar Oliver at the addresses given in the application that a power had been applied for. No notice reached Edgar Oliver. The brokers forwarded the power to F. W. Oliver, who returned it to the brokers, executed by him, and purporting to be executed by Edgar. The brokers, believing that all was right, sold the consols, and the power was lodged at the bank by the appellant, who afterwards signed the "demand to act" indorsed on the power and executed the transfer to the purchaser. A similar transaction afterwards took place with regard to a transfer of bank stock. After F. W. Oliver's death, in 1899, it was discovered that the signatures of Edgar Oliver to the powers of attorney were forgeries, and that he knew nothing of the transactions. Edgar Oliver having brought an action against the bank for restitution, the appellant was made a third party upon a claim of indemnity by the bank. The action was tried before Kekewich, J., whose judgment declared that the transfers were invalid, and ordered the bank to place equivalent amounts of consols and bank stock in the name of Edgar Oliver in the bank books and to pay him a sum equal to the dividends which had accrued since the transfers, and also ordered the appellant to indemnify the bank by similar transfers and payment to the bank. This decision was affirmed by the Court of Appeal.

JUDGMENT (EARL OF HALSBURY, *L. C.*): My Lords, I confess I have been puzzled to think how I should have argued this case on the part of the appellant if I had had the duty of doing it. The two learned counsel have very ingeniously occupied a considerable time in endeavoring to solve the difficulty I should have had. I entertain no doubt upon the question; it seems to me that there never has really been any doubt.

Taking the original judgment in *Collen vs. Wright*, I will just read three passages from it. Lord Campbell says: "There can be no doubt that the testator asserted that he had authority to let the property on the terms to which he agreed. That is a promise and a warranty. Might he not then have been sued on the warranty, although he believed it to be true? If he induced the plaintiff to act upon it, he was bound. It is broken, since the testator had not authority." Wightman, J., says: "If a man makes a contract as agent he does promise that he is what he represents himself to be, and he must answer for any damage which directly results from confidence being given to the representation." Crompton, J., says: "I am of the same opinion. The first question is, Whether an action lies on the contract of a person representing himself to have authority, there being good consideration for such contract." Those three statements seem to me to cover the whole ground. And those statements are corroborated by the full Court of Exchequer. The whole number, therefore, of the judges who held both of those principles to be part of the law of England was nine judges, and it was nearly fifty years ago. That seems to me to render this case free from doubt.

Here is a formal document intended to be acted upon, which, upon the face of it, purports to be a representation of authority by the persons whose

signatures purport to be appended thereto. Upon the facts, I should have thought it was impossible to doubt that that was a representation of authority on the part of those two persons whose signatures purport to be to it, and the person who presents the authority and demands to act upon it is himself asserting that he has authority to do the thing he is doing. He had no such authority. The result is that the bank has transferred a quantity of consols standing in the names of two persons when only one person gave the authority.

This appears to me to come within the decision to which I have referred, and I do not think it is necessary to go through the *catena* of cases on that subject.

It is said that this case is extending the principle of *Collen vs. Wright*. I do not think it is. It seems to me as a matter of principle to fall exactly within *Collen vs. Wright*. I am not able, and I never have been able, from the beginning to the end of the argument, to understand what is meant by saying that there is a distinction which makes it an extension of *Collen vs. Wright*, because the consequence in *Collen vs. Wright* was a contract, but here no such consequence follows. The argument arises from a confusion as to whether the facts made a contract between the plaintiff and the defendants, and the difference of whether or not a contract follows in consequence of the representation made; that seems to me an absolutely illogical and unintelligible distinction. That which does enforce the liability is this—that under the circumstances of this document being presented to the bank for the purpose of being acted upon, and being acted upon on the representation that the agent had the authority of the principal, which he had not, that does import an obligation—the contract being for good consideration—an undertaking on the part of the agent that the thing which he represented to be genuine was genuine. That contains every element of warranty.

The result is, I think, that this appeal should be dismissed with costs, and I move your Lordships accordingly.

BANK IN LIQUIDATION—WINDING-UP ACT, 1886, SECTIONS 15 AND 31—RESTRICTED POWERS OF LIQUIDATORS OF BANK TO SUE IN THEIR OWN NAME—POWER TO AMEND BY ADDING BANK AS PLAINTIFFS.

KENT AND OTHERS, LIQUIDATORS OF LA BANQUE VILLE-MARIE vs. LA COMMUNAUTE DES SOEURS DE CHARITE DE LA PROVIDENCE, *et al.* (1903, Appeal Cases, page 220).

Under the Canadian Winding-up Act, 1886, §§ 15 and 31, a company in liquidation retains its corporate powers, including the power to sue, although such powers must be exercised through the liquidator under the authority of the court. The liquidator must sue in his own name or in that of the company, according to the nature of the action: in his own name where he acts as representative of creditors and contributories; in that of the company to recover either its debts or its property.

Where liquidators sued in their own name to recover a debt due to the company:

Held, that the error was one of form, which the court had power to give leave to amend under §§ 516 and 521 of the Code of Civil Procedure. The defendant having admitted the debt and pleaded set off, and not having excepted to the form of the action, leave to amend should have been given in the sound exercise of judicial discretion.

STATEMENT OF FACTS: The judgment of the Quebec Court of the King's Bench in this case was given on page 649 of *THE BANKERS' MAGA-*

ZINE for May, 1903, where the facts are fully stated. An appeal was taken to the Privy Council, the judgment of which was delivered by Lord Davey.

JUDGMENT: The Privy Council held, affirming the judgment below, that the liquidators had not in themselves a status to sue in this case. The office of the liquidator has, in fact, a double aspect. On the one hand he wields the powers of the company, and on the other hand he is the representative for some purposes of the creditors and contributories. There are, therefore, many cases in which he may sue in his own name; as, *e.g.*, to impeach some act or deed of the company before winding up, which is made voidable in the interest of the creditors and contributories. But their Lordships think that wherever the object of the action is to recover a debt, or to recover or protect property, the title to which is in the company, the action should be brought in the name of the company.

As to the question of allowing an amendment adding the bank as parties plaintiffs, the learned judge proceeds as follows: The powers of amending pleadings are contained in Chapter XXIII of the Civil Procedure Code. The learned judges in the Court of the King's Bench seem to have thought that the language of the sections contained in this chapter was insufficient to authorize the amendment sought by the appellants. But it was not denied by learned counsel for the respondents at their Lordships' bar that the power was sufficient for the purpose, and it was argued only that it was a discretionary power, and their Lordships should not overrule the discretion exercised by the court below. In the opinion of their Lordships the powers of amendment given by the Code are full and ample, and the court had power under section 516 to give leave to amend the summons or declaration in any way the court might think proper. Indeed, it may be doubted whether the defect in the present case was really more than an irregularity of form which might have been cured by an amendment by the judge *mero motu* under section 518. The substance of the action was to recover a debt alleged to be due to the company in liquidation which the liquidators were the only proper persons to receive and give a discharge for.

No defence was available against the company which was not equally available against the liquidators, and the parties were content to fight the case out with the liquidators who were their real opponents, and the case was in fact fought out with the liquidators without any exception to their right to sue, and was ripe for judgment. It is impossible to say that the proposed amendment changes the nature of the demand or can in any way cause a prejudice to the respondents. In short, the liquidators are *domini litis*, and it was not improper to make them plaintiffs, but they ought to have joined with themselves the company; or, in other words, the liquidators had the right to sue, but sued in the wrong form. It would seem, therefore, that Art. 521 of the Code is applicable to the case. Their Lordships would always hesitate before interfering with the exercise of a discretion by the court below, but in the present case the learned judges seem to have proceeded on an erroneous construction of the Code. Their Lordships will only add that their decision will not be a precedent for substituting one plaintiff for another in other circumstances, and no such injustice as the Chief Justice apprehended need be feared. All they decide is that the proposed amendment could, and in the particular circumstances of this case ought to, have been allowed in the sound exercise of a judicial discretion.

PROMISSORY NOTE—PLEA THAT NOTICE OF PROTEST WAS NOT REGULARLY GIVEN TO ENDORSER—PLEA NOT SUPPORTED BY AFFIDAVIT (ART. 208 C. C. P.)

THE WESTERN LOAN AND TRUST COMPANY vs. ROSS (Quebec reports, 12 King's Bench, page 226).

A plea to an action against the endorser of a promissory note, alleging that notice of protest was not regularly given, should set out specially the irregularity complained of; and, further, such plea must be supported by affidavit establishing the facts alleged. (Art. 208 C. C. P.).

STATEMENT OF FACTS: The action was on a promissory note for \$22,000, signed by Hibbert, and payable to the order of W. B. Stephens, who endorsed it to the order of the Western Loan and Trust Company. Stephens was the manager of the plaintiff company and he endorsed the note and delivered it for value to the plaintiff, and subsequently died. His heirs renounced his succession and the defendant, Ross, was duly appointed and acts as curator to the vacant succession of Stephens.

About the time of the maturity of the note it was handed to the Montreal Branch of the Canadian Bank of Commerce for collection. The note was presented to Hibbert on its maturity, and as he had not funds to meet the note it was protested by the notary of the bank and notice of dishonor sent by him through the post by a letter addressed to the endorser, W. B. Stephens (then dead) and the Western Loan and Trust Company. At the trial judgment was given condemning Hibbert and Ross jointly to pay the amount of the note. An appeal was taken to the Court of Review, where it was strongly contended on behalf of the defendant, Ross, that protest was not properly given to him as the representative of the said W. B. Stephens in accordance with Sec. 49, sub-sec. 1 of the Bills of Exchange Act. This sub-section is as follows: "Where the drawer or endorser is dead and the party giving notice knows that, the notice must be given to a personal representative if such there is and with the exercise of reasonable diligence he can be found." The Court of Review upheld this contention and dismissed the action against the defendant, Ross. Further appeal was taken to the Court of Appeal whose judgment was given by Mr. Justice Hall.

JUDGMENT: We are all of opinion that the evidence established conclusively that the note was an accommodation note for Stephens, and that if this allegation had appeared in the pleadings, the defect, if any, in connection with the protest and notice would have had no effect in so far as Stephens or his estate were concerned, but the absence of such an allegation in the pleadings necessitates a careful consideration of the other grounds submitted to us.

As to the first ground, there can be no doubt that the notice was not properly addressed. Stephens was appellants' manager. At the maturity of the note he had been dead over six months, and his death disclosed the embarrassed position in which his management had so involved the appellants' company that a liquidation had been found necessary, and had been in operation for over four months before this note was handed over to the bank for protest.

There can be no moral doubt, therefore, that the appellants were fully aware of Stephens' death, and the most ordinary prudence would, therefore, have required them to convey this information to the bank when asking it to

perform the *pro forma* function of making the usual demand of payment upon the note and advising the endorser of its dishonor. On the other hand, the respondent, Ross, when called upon to plead to the action, knew as well as we know now all these details, and as he made no specific denial of plaintiffs' allegation that "payment of said note at maturity was duly required and demanded of defendant at the place stipulated for its payment, and payment refused and said note was duly protested for non-payment and notice thereof given to the indorser Stephens" (I quote the words of the declaration), he was, to say the least, equally negligent with plaintiffs. It is true that by a general (No. 3) of his plea he denies No. 7 and No. 8 of plaintiffs' declaration, No. 7 being the one above quoted, and, of course, he contends that this was sufficient to put this allegation in issue, and to entitle him to the benefit of any irregularity in regard to said notice and protest. This brings us naturally to the consideration of appellants' second ground, that defendant forfeited all benefit from the denial contained in section 3 of his plea, through failure to support it by the affidavit required by article 208 C. P.:

"Every denial, in the case of a promissory note, that the necessary protest, notice and service have been regularly made must be accompanied with an affidavit of the party making the denial, stating in what respect the irregularity consists."

The origin of this provision in the Judicature Act, and its retention in our Code of Procedure, rather than in connection with the Bills of Exchange Act, show that it was enacted and is preserved to ensure good faith in pleading, to inform the opposing party what is the nature of the defence intended to be urged, and in this respect the form of defendant's plea and the absence of the stipulated affidavit, seem to the majority of the court to be fatally defective. The omission, by the defendant, of any specific denial of his having received notice of protest, by reason of its improper address to Stephens himself after his death, and the absence of any affidavit in support even of the general denial of the validity of the service, were, if not an invitation, at all events an excuse, in our opinion, to the plaintiffs to refrain from any special answer to that portion of the plea; a special answer to the effect that neither the actual representative of the appellants' company—the official liquidator—at the maturity of the note, nor the bank under whose directions the protest was made, did, as a matter of fact, know that Stephens was dead. By the absence of such specific plea and affidavit the plaintiffs may also have been put off their guard as to the necessity of invoking—either by special answer, or amendment to their declaration—the principle upon which they now rely; that the note was given for Stephens' accommodation, and, therefore, that he was not entitled to notice of protest. Concurring as we all do in the position that this principle, had it been invoked, would have been an effectual answer to the objection upon which the judgment in review is based, a majority of the court are of opinion that respondent's own neglect in particularity in pleading the specific defect in the service of notice of protest, and his failure to support his plea by the affidavit required by article 208 C. P., deprive him of the right to succeed under that portion of his defence, and concurring as we do in the judgment of the Superior Court upon the other issues raised by the defendant, the present appeal is maintained and the original judgment restored.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in banking law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail.

DRAFT PAID TO WRONGFUL HOLDER.

Editor Bankers' Magazine:

CASCADE, IOWA, July 15, 1908.

SIR: A party wishing to pay the interest on a mortgage held by a party in another city, goes to the bank and instructs the Cashier to issue a draft payable to John L. Doe and to mail it to John L. Doe, and pays for same, including exchange and postage. About six months after he learns that the party holding the mortgage never received the draft, and on investigation finds that the Cashier by mistake made the draft payable to John J. Doe, and that a party who was properly identified as John J. Doe presented the draft to the bank on which it was drawn and got the money on it. It has since been found out that this party was a tramp and cannot now be found. Who, in your opinion, should be out this money, the purchaser, the bank that issued the draft, or the bank that cashed the draft? Has there ever been a decision on a case of this kind?

SUBSCRIBER.

Answer.—It is plain that the loss cannot fall on the person depositing the money with the bank. He left the money there with an express direction that it should be applied to payment for a draft to be issued to John L. Doe, and to be mailed to that person. The bank can discharge itself from liability to him only by showing that it complied with his directions. But this it cannot do, and it cannot set up its own mistake as an excuse for doing something else. But whether the loss must fall upon the bank issuing the draft or the bank cashing the same, must depend upon all the circumstances of the case. If the proximate cause of the loss was the mistake of the issuing bank, then that bank is the one liable; but if the loss is more directly attributable to negligence on the part of the other bank, the latter must bear the same.

DIRECTOR'S RIGHT TO INSPECT BANK'S BOOK.

Editor Bankers' Magazine:

PITTSBURG, Pa., July 12, 1903.

SIR: At your convenience, kindly give me your views on the lawful right of a director of a banking institution to make a personal examination, at his own instance, of accounts on the individual ledger of the bank. The impropriety is not questioned, but the legality of a personal inspection, as being in line with a proper performance of the duty of a director is upheld. The power of the board appointing an auditing committee to examine the accounts of the bank is not disputed, the contention being on the power and duty of a director to make, at his good will and pleasure, the inspection, without explaining to the executive officers the motive, or securing the consent of the board to do so.

PRESIDENT.

Answer.—It would seem to be the legal right of each director to inspect all the books and records of the bank. In *People ex rel. Muir vs. Throop* (12 Wend. [N. Y.] 183), it was decided that the board of directors of a bank have no right to pass a resolution excluding one of its members from an inspection of its books, although they believe him to be hostile to the interests of the institution; and it was accordingly held that where the Cashier of a bank had refused to permit a director to inspect the discount book, that a mandamus lay commanding the Cashier to submit the book to his inspection; although the conduct of the Cashier had been approved by the board. The Court said: "The thirteen directors were elected by the same stockholders, at the same election, to hold for the same term, clothed with the same powers, invested with the same trusts—each to exercise his best judg-

ment in the management of the affairs of the company. Suppose a difference of opinion exists among the directors, a majority must control; but if they are divided, say six against seven, is it competent for the majority to turn the minority out of the directors' room, and refuse them any information of the business transactions of the bank? Surely such an outrage could not be defended; nor can I conceive of any plausible apology for it. The directors, thus virtually ejected from office, might be the principal stockholders in the bank, and the majority might have very little interest therein, or might be hostile to the best interests of the institution. These are possibilities, but have little or nothing to do with the question of right. Every director has an equal right in regard to this matter." If a director misuses his right of access to the books, the only remedy is for the stockholders to remove him from office.

NEW YORK STATE BANKERS' ASSOCIATION.

TENTH ANNUAL CONVENTION TO BE HELD AT SARATOGA SPRINGS SEPTEMBER 9 AND 10.

The Council of Administration of the New York State Bankers' Association, which is composed of the officers of the association and the chairmen of each of the eight groups of banks in the State, met at the Montauk Club, Brooklyn, Wednesday evening, July 29, and discussed matters pertaining to the banking interests of the State.

The meeting was presided over by former Senator Stephen M. Griswold, of Brooklyn, who is president of the State association.

Among the matters discussed and which will be considered at the State convention, to be held at Saratoga on September 9 and 10, were: The question of admitting trust companies to membership; of paying interest on daily balances; the passage of a law by Congress for a more elastic currency, and the money order business, which is being done now by the express companies and the Post Office Department, and should be done by the banks.

The committee of arrangements for the Saratoga convention also met with the council of administration, and will issue in due time notices of reduced railroad fares, hotel accommodations for the convention, etc., which will be sent out to all the banks in the State.

The following gentlemen were present: Hon. Stephen M. Griswold, President Union Bank, Brooklyn; Charles H. Sabin, Vice-President National Commercial Bank, Albany; E. T. Johnson, Cashier First National Bank, Glens Falls; T. Ellwood Carpenter, President Mt. Kisco National Bank, Mt. Kisco; Frank E. Johnson, Cashier Bank of Suspension Bridge, Niagara Falls; Henry C. Brewster, President Traders' National Bank, Rochester; E. O. Eldredge, Cashier Owego National Bank, Owego; Willis G. Nash, Cashier New York State National Bank, Albany; Edward Elsworth, President Poughkeepsie Savings Bank, Poughkeepsie; Hiram R. Smith, President Bank of Rockville Center, Rockville Center; J. Edward Simmons, President Fourth National Bank, New York; J. H. De Ridder, Cashier Citizens' National Bank, Saratoga Springs; Lewis E. Pierson, Vice-President New York National Exchange Bank, New York; Elliott C. McDougal, President Bank of Buffalo, Buffalo; E. S. Tefft, Cashier First National Bank, Syracuse.

THE FOWLER AND ALDRICH BILLS.

[Address of Geo. J. Seay before the convention of the Virginia Bankers' Association, at Lynchburg, Va., June 19, 1908.]

Mr. President and Gentlemen of the Virginia Bankers' Association: It is possible that all of you may be familiar with the terms of the Aldrich and Fowler bills, which are now the most prominent measures for the reform of the currency and banking system before the country, and they may be said to be rival measures in many respects.

Having been in the banking business for more than twenty years, however, I am aware that the daily labors of a banker are, in most cases, too taxing to leave much time or inclination for the study of economic problems, especially such an abstruse problem as the currency, therefore it may be that many of you know the bills only in a general way, and possibly some of you here may not have read them. Since I am to discuss these bills it will be necessary to give you a brief synopsis of each.

The Aldrich bill, which was before the last session of Congress and which failed of passage, provided that all National banking associations, designated for the purpose by the Secretary of the Treasury, should be depositaries of public money under such regulations as might be prescribed, and that the Secretary might deposit in such banks money received from all sources, upon the giving of satisfactory security—and it provided that the Secretary might accept as security, besides Government bonds, the bonds of any State; the bonds of any city or county in the United States which has been in existence as a city or county for twenty-five years, and which, for a period of ten years previous to the deposit, has not defaulted in the payment of principal or interest, and which has a population of more than fifty thousand and whose net indebtedness does not exceed ten per cent. of the value of the taxable property; and also that the first mortgage bonds of any steam railroad company, which has paid dividends of not less than four per centum per annum on its entire capital stock for a continuous period of ten years, might be received as security. These are practically the conditions under which many of the Savings banks of the North are permitted to invest in railroad bonds; whether the Secretary should deposit to the amount of the par value of the bonds was left to his discretion. And in addition to all this the bill provided that the United States should have a lien on the current assets of the banks in which public money might be deposited, and probably one of the most far-reaching provisions of the bill was that banks might act as financial agents of the Government. The bill provided that the banks should pay interest on all their deposits by the Government at not less than $1\frac{1}{2}$ per cent.—the rate to be fixed from time to time by the Secretary. It also provided that bonds to be issued for the building of the Isthmian Canal should be available for circulation upon the basis of the present two per cent. bonds.

The bill further provided, by an amendment to the present National Bank Act, that the Secretary, in his discretion, might retain in the general fund of the Treasury National bank notes received in the ordinary course of business or presented to the Treasurer for redemption, and pay out such as might be fit for circulation for any of the obligations of the Government, excepting principal and interest of the public debt. I have not seen this provision commented upon. The effect of this would simply be, as I take it, to postpone the final redemption of such notes by the banks of issue, and while not a matter of any particular consequence, so far as I can

see, it is in my opinion an interference with one of the principles underlying the operations of a sound currency. This bill had very strong advocates in the last session of Congress. It was presented at a time when the Treasury was withdrawing currency in large sums from the channels of trade—at a time when trade was most active and currency most needed, and many people were then willing to vote for it, as they would have been willing to vote for any reasonable measure of relief, who did not wholly approve the bill. The bill was prevented from coming to a vote in the Senate. Very careful inquiry was made into the reasons for opposition. The objections which have been urged against it are somewhat along these lines :

The advocates of a credit currency were opposed to it upon principle, believing that it could not possibly effect any cure for the evils which are believed to be inherent in the present bank-note currency, but that it would tend to perpetuate them. It would stop the locking up of money in the Treasury, of course, but it would permit the substitution of State, city, county and railroad bonds for bonds now acting as security for Government deposits and would render the Government bonds available as security for additional circulation, and since they believe that a bond-secured circulation can never be adequate for trade purposes, additional circulation under the present system could not do more than give temporary relief, which would obscure the vital principles at issue. Western banks as a rule, and many banks in other parts of the country, were opposed to this bill because the payment of interest on Government deposits would render such deposits secured by Government bonds unprofitable, and would, therefore, cause a heavy loss in the market value of the bonds. They thought that the passage of the bill would tend to the concentration of Government deposits in New York and the East where the banks could probably borrow the State, city and railroad bonds to be used as security without the necessity of investing their capital in them. The effect of the passage of this bill would have been this :

The payment of $1\frac{1}{2}$ per cent. on deposits secured by Government bonds yielding only 1.60 to 1.75 at prevailing prices, while banks were compelled to keep twenty-five per cent. or even 15 per cent. reserve on their deposits, would have resulted in actual loss on such deposits. The deposits would have been surrendered in such cases, and probably would have gone to New York or other large Eastern cities. It is probably true that any act on the part of the Government which would seriously affect the value of Government bonds, which had been sold by the Government itself at a value which it could not otherwise have obtained for them but for the uses which the Government itself created for the bonds, would be an unjust act. It has been, therefore, suggested since the Aldrich bill failed to pass, that the Government, if it should exact interest on deposits, should exact it only upon the deposits secured by other than Government bonds.

Calculations will show, however, that such deposits are likely to be unprofitable to such banks as would have to become the holders of such bonds by purchase.

I have prepared a table showing what would be the probable profit or loss on Government deposits at $1\frac{1}{2}$ and two per cent. secured by three per cent. or four per cent bonds of such a character as the Government would receive, based upon the supposition that the Government would deposit say only three fourths of the value of the bonds, and setting aside fifteen per cent. reserve against the deposits. I have supposed that the three per cent. bonds could be purchased at par and the four per cent. bonds at 105. As a matter of fact, however, the market prices would very likely be higher on the average. The annual profit on the three per cent. bond transaction, paying the Government two per cent. would, on a deposit of \$100,000, be \$50, with money at four per cent., and a loss of \$675, with money at six per cent. Paying the Government $1\frac{1}{2}$ per cent. the profit, with money at four per cent., would be \$425, and a loss of \$300 with money at six per cent.

The result of the four per cent. bond transaction, paying the Government two per cent., would be a profit of \$850 annually, with money at four per cent. and \$25 with money at six per cent. Paying the Government $1\frac{1}{2}$ per cent. the profit, with money at four per cent., would be \$1,225, and with money at six per cent. \$400, a maximum profit of about 1.5 per cent. and a possible loss of $\frac{5}{8}$ of one per cent. The market variation in the price of the bonds would not justify the venture, if made for the purpose of securing Government deposits for profit.

There are other objections to be urged against the Government requiring interest on deposits—and against the terms of the Aldrich bill. The minimum rate in that bill was fixed at $1\frac{1}{2}$ per cent. In the report of the Banking and Currency Committee accompanying the Fowler bill, the criticism of this point expresses the opinion that making the rate variable, "To be increased or decreased at the pleasure of the Secretary, must necessarily result in intense rivalry, bitter criticism, and constantly subject the Treasury to endless scandal."

It is believed that this would result in competition for deposits, and it would certainly, in my opinion, tend to excite the desire for interest on deposits in quarters where interest has not heretofore been paid. It would also tend to keep the interest rate for loans on a higher level, and while this, from the standpoint of a lender, is not an unmitigated evil, if it should result in making banks pay more interest on deposits generally, there would be no benefit to them, and in any event it is, in my opinion, injurious to the interests of the people and a hindrance to commerce, in that it would, as I have said, tend to keep interest on a higher level.

Government deposits, under such conditions, would be most profitable, like the present bank note circulation, when and where money might be cheapest. Of course, if the Government were to deposit to the amount of the par value of the bonds received, the results given would be modified. The maximum annual profit, under the conditions given, on a deposit of \$100,000 would then be \$1,700, or 1.7 per cent. and the minimum profit \$100. This would, however, not alter the fact that the deposits would be most profitable when and where money might be cheapest. The results given, it is to be understood, would apply only in cases where the bonds would be purchased for the purpose of securing deposits. In cases where banks would in any event hold as investments bonds of the character specified, the illustration would not apply. It must be observed, however, that banks in such cases would be likely to hold the bonds not only as investments but as a kind of second reserve, to be sold in emergencies and applied to the payment of deposits when demanded, and that in such an event the bonds would not, of course, be available if held as security for deposits.

The Fowler bill provides that any National bank may issue twenty-five per cent. of its capital in circulating notes without depositing United States bonds, or any other security—credit currency based upon its own assets in its own hands—but that it shall maintain a reserve against these obligations just as it is required to do against deposits, the nature of the obligation being in no material respect different from a deposit obligation.

It also provides that the bank shall deposit with the Treasurer a five per cent. fund, as at present, which fund may consist of United States bonds, gold coin, or United States notes, and shall be counted as a part of the reserve required to be maintained. The fund is not to be used for current redemption of the notes, however, but is to be held as a guaranty of final payment. A tax of one-half per cent. per annum is to be paid on the circulation and added to this five per cent. guaranty fund. It is further provided, that the notes shall be a paramount lien upon the assets of the issuing banks. It has been objected that this paramount lien would be unjust to depositors, but surely such objectors do not fairly take into account the fact that, under the present bank-note system, an amount equal to the notes issued is taken

out of the assets at the beginning and invested in United States bonds and set aside and held by the Government. The most that can logically be said is that in the case of any bank, at least that amount of its assets would thus be securely invested, whereas, if all of its assets had remained in its own hands, the whole might have been lost. As against depositors however, this argument, which is hardly a practical one, would not apply, for in that case they would be bound to lose in any event. It is the note holder who would then also be drawn into the loss. It is proposed, however, to protect the note holder by a guaranty fund and the levy of a tax which the experience of forty years of National banking has proved would produce four times the amount necessary to protect him. The present Secretary of the Treasury in his last annual report gives it as his opinion that it would not be necessary to make such currency a first lien upon assets in order to assure absolute safety to the note holders. He states that for one-eighth per cent. "premium on insurance" the Government could afford to guarantee such notes, and would make a profit.

The present Comptroller says in his annual report that "the period covering the whole history of the National banks is long enough to have established reliable averages, which can be as safely counted upon as the average upon which the vast insurance business of the world is done."

The Fowler bill does not, however, make the Government a guarantor of the notes, but it does make the notes a first lien upon the assets of the banks, which, as I have stated, both the Secretary and Comptroller believe to be unnecessary to insure safety. The bill provides that all banks located outside of certain redemption cities, which are designated as New York, Chicago and San Francisco, shall redeem their notes over their counters in lawful money, but that banks in the redemption cities named shall redeem all of such notes in gold coin or United States notes, and that banks outside of these cities shall select some bank in them as a redemption agent. This is a practical and wise provision, in my opinion. It would tend to concentrate the coin reserve of the country in the cities named, which I believe would be beneficial to international commerce and to the country at large. I have prepared a statement classifying the money of the country in the hands of the banks and in circulation among the people, which shows the amount of gold coin in the banks of the country of July, 1902, to have been \$296,000,000 and gold certificates \$182,000,000, while the gold coin supposed to be in circulation among the people amounted to \$335,000,000 and gold certificates to \$173,000,000.

I do not think that I am overstating the matter when I say that our currency system is wholly unscientific and the most wasteful system in use in any great country. This gold in circulation among the people should be in the hands of the banks as a reserve for deposits or bank-note circulation, and available for the settlement of international balances. Where is this gold circulation—who ever sees it? And why is it hidden away or hoarded? Is it distrust of our currency and banking system? I think it is.

The figures given are in some respects estimates, because it is impossible to obtain full information necessary to an absolutely correct classification. The Government statisticians give the amount of circulation in the hands of banks which they were unable to classify, as \$28,000,000. To this extent only, therefore, is the classification approximate. This amount of coin may not be among the people, but it is supposed to be.

The Fowler bill provides that all National banks redeeming their notes at either of the cities, New York, Chicago, or San Francisco, shall constitute a redemption district, and that if any National bank in one district shall receive the notes of a bank in another district, it shall not pay them out, but shall forward them to some bank in the district to which the notes belong, or to its own redemption agent, which shall so forward them. This is a comparatively simple matter in its practical work-

ing. The engraved notes would undoubtedly show on their face plainly at what bank they were redeemable, which would determine the district.

It is a fact which is seldom commented upon, so far as I have seen, and one which possibly has been forgotten, that the original National Bank Act, sections 5191 and 5195 of the Revised Statutes, provided that National banks located in certain reserve cities should keep on hand in lawful money twenty-five per cent of the aggregate amount of their notes in circulation and their deposits, and that other banks should keep fifteen per cent.; three-fifths of this reserve of fifteen per cent. then, as now, might consist of balances kept in the reserve cities. And this is the further point to which I wish to call attention. Banks in all the reserve cities named were required to select a bank in New York city as agent for the redemption of their notes, and banks outside of the reserve cities required to select some bank in them as redemption agents.

When the Congress—or the people—by an amendment to the Bank Act abolished this provision as to redemption agencies and substituted a five per cent. reserve with the Treasurer for a more conservative reserve in their own vaults, they departed from one of the essential principles of a sound currency, although it was a hardship to require the banks to invest their capital in bonds for the security of circulation and then require them also to maintain a twenty five per cent. or fifteen per cent. reserve. It is curious that the present tendency is to go back to first principles.

While, as I have stated, the Fowler bill does not make the Government a guarantor of the new notes, it provides that in the case of a failed bank the notes shall, upon presentation to the Treasury, be paid out of the guarantee fund, and it provides also that if that fund shall fall below an amount equal to three per cent. of the outstanding notes an extraordinary tax may be imposed, not exceeding one per cent. in any year, but such extraordinary tax shall be refunded when the guaranty fund shall be again raised to five per cent. The reason for not providing for the redemption by the Treasury of notes of banks in active business is because it is desired to take the Government out of the banking business as far as possible, and leave the redemption to be managed by the banks, upon whom the burden properly belongs, and by whom it can be better managed, possibly through the clearing-houses of the redemption cities. The bill further provides that the Secretary may deposit any public money received, from whatever source, in designated depositories, without security—but such deposits shall not in any case exceed seventy-five per cent. of the capital of the bank, and shall be, along with the circulating notes, a paramount lien upon the assets. If this should be objected to on grounds similar to those advanced against giving to circulating notes a prior claim upon assets, to which I have alluded, the same answer would apply, in any event, under existing law, sections 3466 and 3467 of the Revised Statutes, the Government has a preferred claim upon the assets of any insolvent debtor.* The Fowler bill fixes the rate of interest to be paid on deposits made under the provisions thereof at two per cent., and the rate is fixed for the reason which the report on that bill gives in very strong language, and which I have quoted.

The arguments which I have advanced against the payment of interest on Government deposits would also apply in this case, but, of course, the question of profit on the deposits would not come in, as in the case of the Aldrich bill, where banks are required to put up certain bonds as security. The Fowler bill also required that the bonds to be issued for the Isthmian Canal shall be available for circulation upon the basis of the present two per cent. bonds.

* Section 3466, which gives the United States a priority for all claims it has against insolvent debtors, does not apply to the case of an insolvent National banking association (*Cook County National Bank vs. United States*, 167 U. S., 445).—Editor *BANKERS' MAGAZINE*.

These are the essential features of the two bills. There are other details to which I have not thought it necessary to allude.

I know the Fowler bill does not embody all the principles for which Mr. Fowler has been contending for some years. It does not, I think, begin to go far enough, in his opinion. It was drawn with the view of containing, I believe, only such provisions as it was thought possible to pass through Congress at the time, when some measure of relief was greatly needed. After the introduction of the Aldrich bill, it was amended by providing for the deposit of any money received by the Treasury from whatever source, a very important and much-needed provision. The provision for the payment of interest on Government deposits was then also added. While the Fowler bill, like the Aldrich bill, would release Government bonds, now security for deposits, and render them available as security for circulation, the Fowler bill provides for injection into the present system of a currency which can promptly be issued when most needed, and which it is believed will be promptly presented for redemption, without restrictions or limitations, when actually not needed in trade channels, an elastic currency—and there are good grounds for believing that it would prove so.

The aim of the Aldrich bill is rather to increase the currency, and the aim of the Fowler bill to inject an element, the operation of which will improve it. It is of as great importance to provide for the prompt redemption of bank-note currency when it is not needed, as it is to provide for its issue when the demand is urgent.

Our present system, as you know, places a limit upon redemption of bank-note currency of three millions in any month.

This is a wholly unsound principle, and it is a matter of astonishment that the law has been allowed to remain in force so long. It prevents the issue of currency when needed and prevents the retirement when in obedience to the natural laws of trade, it would and should be retired. It is a system of forced circulation. The Secretary, notwithstanding the most strenuous efforts to increase circulation last fall, up to November 1 was able to add only \$20,000,000 for the year to the National bank notes outstanding. He states absolutely that fully \$50,000,000 increase could have been secured had the law permitted its retirement when not needed. It was not profitable to issue it, and the banks, therefore, would not issue it. The reasons for the enactment of the law were briefly these: When the law was passed in 1882, banks reducing their circulation by the deposit of lawful money were not subject to assessment for the cost of transportation and redemption of the notes, the effect of which was that many banks took advantage of the situation to deposit lawful money for the retirement of notes which, in the natural order of things, would have been retired by means of the five per cent. redemption fund, and thus threw the expense of redemption upon the Government and the other banks, and having thus provided for the redemption of a certain amount of circulation, would proceed to increase it in a like amount, thus bearing none of the expense incident to redemption. Another reason was at that time the lawful money deposited by reducing banks for redemption of the notes was required to be held as a trust fund available only for redemption of those particular notes sought to be retired, thereby locking up in the Treasury an amount of lawful money equal to the amount of notes which it was desired to redeem. On several occasions this trust fund amounted to over \$100,000,000; both of these evils have been remedied, money now deposited for redemption being covered into the Treasury and the notes being redeemed from the general cash.

The present Treasurer and Comptroller both advocate the repeal of this law.

Neither the Fowler bill nor the Aldrich bill provides for it. It is in my opinion a very important matter, requiring immediate correction. During the past six years the general stock of currency has increased \$715,000,000; the currency in cir-

ulation among the banks and people has increased \$545,000,000; National bank notes have increased during that time about \$180,000,000, gold and gold certificates \$274,000,000, silver, etc., \$120,000,000. United States and Treasury notes (in circulation) have decreased about \$40,000,000.

Any severe reverse in trade would witness the greatest accumulation of currency in banks the country has ever known. This would, in all probability, tend to heavy exports of the standard metal—gold—since money would be extraordinarily cheap. I repeat, we must have facilities for retiring a redundant currency, and this is where the evils of a Government-made legal tender and semi fiat money come in. We may not be suffering perhaps just now, at least not sensibly, from too great an amount of currency, but I believe it to be true that a redundant issue of semi-fiat and bond-secured currency a few years back has helped to get us into the present state of dangerous expansion. That most able journal and very high authority, "The Commercial and Financial Chronicle," in its issue of May 28, expresses this opinion. It will probably interest you to know that the cash in the hands of all the banks in the country at the latest date to which such statistics are available, that is, July, 1902, was less than nine per cent. of the deposits—to be accurate 8.63 per cent.—a ratio smaller than in any period for ten years. The National banks hold 18.58 per cent. of their individual deposits, and the State banks, including Savings banks, 4.17 per cent.; deducting the liabilities and cash of the Savings banks, all other State banks held 6.25 per cent. of their deposit liabilities, making the average of National banks and the commercial State banks 11.86 per cent. While this shows a very high degree of trade activity, it also shows a very high degree of expansion. The deposits of all the banks of the country have increased from four and one-half billion in 1898 to nine billion, seven hundred and seven millions in 1902, and the cash holdings from five hundred and fifteen millions to eight hundred and thirty-eight millions. Our smaller neighbor, Canada, who does business pretty much as we do, with bank deposits of three hundred and ninety millions, had thirty-five millions, or nine per cent. in cash on hand; including the note issues of the banks, which amount to about fifty-five millions, based on assets, the banks had 7.90 per cent. of total liabilities.

The currency of this country in circulation has increased since last July up to June 1 one hundred and thirty-three millions, the full amount of which is in active use among the people; at least, the National banks at the date of their last statement, April 9, did not hold any of it, their cash holdings being five hundred and eighty-one millions, against five hundred and ninety-seven millions in June of last year. It is reasonable to suppose that the State banks are in a like condition. In the meantime loans and deposits have increased, and it is, therefore, highly probable that the ratio of cash to deposits is still smaller at this time.

The increased issue of National bank notes at this time is of very doubtful expediency. They have increased \$24,000,000 since March 1 up to June 1. Their issue has increased loans and in the usual way effected an increase in deposit liabilities, calling attention to the diminishing reserve. Money has been cheaper and the refunding plan of the Secretary has made it profitable to issue notes; they have, therefore, been issued, it being only required to maintain in the hands of the Treasurer a five per cent. reserve against them.

As between the Fowler bill and the Aldrich bill, I unhesitatingly pronounce in favor of the Fowler bill.

It provides for the safety of the asset currency to be issued upon a plan the adequacy of which no man can dispute after examination of the facts of experience. It does not, as I have before stated, provide for the guarantee of the currency by the Government. Most of the foremost advocates of credit currency are against guarantee by the Government, and in principle they are right, I think, beyond any

doubt. Nevertheless, since in this country the Government is the guarantor of the payment of the legal-tender notes—the greenbacks—the guarantor of the silver currency worth less than forty cents on the dollar, the guarantor of the National bank notes—I say guarantor, it is practically that—I believe it would serve a practical purpose to guarantee the asset currency, although I do not believe it is necessary to its safety. The masses of the people who have a billion and a half currency circulating among them would not be as ready to think so. I have stated that the amount of gold coin and gold certificates supposed to be in circulation among the people is over \$500,000,000; and it is natural to believe that the distrust which heretofore existed, and which I believe still exists, and perhaps rightly exists, among the people, has much to do with it. This coin would be of far greater value to commerce in the hands of the banks. It would answer as a safe reserve for two billions of dollars of deposits, or bank notes if they were needed. Any system of currency which keeps it in hiding is a tremendously wasteful system. It is probable that the guarantee of the Government on all currency—all of it redeemable in gold—no other guarantee would answer—would gradually draw the gold out from hiding places and into the banks.

In discussing the bills under consideration it serves a purpose to state what they lack as well as what they contain. Many provisions which I believe to be absolutely essential to effective and lasting reform of the currency are not in these bills. In my opinion the report of the Finance and Currency Committee of the New York Chamber of Commerce, consisting of John Harsen Rhoades, George G. Williams, Jacob H. Schiff, Charles S. Fairchild and Lyman J. Gage, which report was made in December last, and can be obtained in pamphlet form, embodies the essential principles which must be enacted into law to cure the evils, which, beyond any doubt whatever, now exist in our present currency. The report says in part: "As to the proposition so often and sometimes persistently made, for a special 'emergency currency,' your committee is of the opinion that this may have a legitimate place in a properly safeguarded general system of credit currency; standing by itself it would, when availed of, only increase the distrust and difficulties, to allay which, ostensibly, would be its purpose. We must come right down to the proposition that the only thing which can be done to make our financial system safe and sound and solid, is to get down to one legal tender, and that is gold, and then to bank upon a currency circulation enlarged upon the present authorized issue of the National banks, and based upon the credit of the legitimate trade of the country, and rigidly safeguarded under the law. This is the only true solution of the problem of the currency that we can see; we believe that this can be made perfectly safe; we believe that it will prove of immense advantage to the country, and believe it to be to the best interest of the whole people that it should be established."

It is the only true solution that anybody will ever see, gentlemen. Any currency bill which stops short of making all forms of currency in the country redeemable in gold, the accepted standard of the principal nations of the world, would leave out the one essential principle of a sound currency, that it shall be redeemable in a standard of inherent fixed value. To this end it should be provided in language less equivocal than our present law that gold should be exchanged for legal-tender silver dollars whenever presented to the Treasury for that purpose, under such regulations as may be provided.

I am aware that there is considerable difference of opinion on this subject. It is advocated by the committee of the New York Chamber of Commerce, which I have quoted. The report of the Secretary of the Treasury Shaw is unanswerable on the subject, in my opinion. The reports of both the Secretary and Comptroller are filled with any amount of valuable and necessary information, without a knowledge of which no man ought to form a final opinion on the currency. They are also

filled with sound arguments on the currency, in my opinion. The Secretary calls attention to the amount of fiat in the two forms of currency, National bank notes and silver dollars. National bank notes are redeemable in lawful money, which may mean silver dollars, and silver dollars themselves are worth under forty cents in gold. He figures the amount of fiat in these two forms of currency at \$565,000,000. He calls attention to the fact that "Not only current obligations of the Government, but all contracts between citizens, and all bills of exchange, domestic and foreign, payable in United States money, are dischargeable at the option of the payor (except where otherwise expressly provided) in money coined on Government account, and at fully thirty-five per cent profit to the Government, the bullion value in which is worth less than forty cents on the dollar." He says further that the peril in this may be averted for a time and possibly for all time.

We are still coining silver dollars at the rate of a million and a half per month. It ought to be stopped. Not a single sound reason can be advanced for its continuance, especially when the bullion is needed for subsidiary currency.

The Secretary further states that "the reason assigned why the exchangeability of gold and silver should not be established, is that it would entail so large an obligation that the national credit would be endangered. This concedes the argument, but pleads the preference that the Government, which has coined the silver and profited thereby, shall be protected regardless of possible danger to the citizens and the perils to business."

The statute now provides that parity between all forms of money shall be maintained, but it does not provide that gold shall be exchanged for silver if demanded. I will quote the Secretary again: "I am not unmindful of the claim that parity will naturally continue so long as the Government accepts silver in payment of revenue. If this be true, there would be no danger to the Government should the two coins be made interchangeable. * * * At the present time the Treasury furnishes all the gold needed, whatever the purpose for which it is demanded, and certainly no more would be required for commerce, and not as much for hoarding, should all doubt as to the status of silver be removed. On the contrary, if all forms of money were made the equivalent of gold, then all occasion for hoarding one coin more than another would vanish, and the danger to the Treasury would be diminished instead of increased." This is precisely the argument which I have advanced in this discussion.

Finally, I will quote ex-Secretary Gage on this point. He says: "We ought not to be squeamish about meeting the parity in a square, straightforward manner. It is thus discredited more than the facts warrant, and if you ask the people of the United States to have perfect faith in the parity of these two metals * * * then the Government of the United States, that is responsible for the situation as it is, itself must set the example."

Now here is an illustration. The act of March 14, 1900, was passed; the House bill proposed to make the two metals exchangeable with each other at the Treasury. The Senate amended it. Why? This is the question that every financial man in the United States asks. Why? If you, the Government, are afraid, can you expect us to have more courage than you possess? Do you ask us to have confidence when you yourself will not lay down the basis for confidence? You complain all the time about the wicked money sharks and their discrimination against silver. They can and will answer, 'Cease to discriminate against it yourself and we will no longer discriminate.'"

If I continue to discuss points which are not in the Fowler and Aldrich bills, but which should be there, or in some other bill, I will consume the whole time of the convention. I will, therefore, bring my "remarks" to a close.

One thing further I will say, however. The banking business has furnished the most efficient currency the world has ever known—check currency—by means of which nine tenths of the domestic trade of this country is carried on. It has come into existence from the necessities of the situation—the outcome of the operation of natural laws—and any man who will carefully consider what it is the banks do day after day, year in and year out, and think it out to a conclusion, and who will deny that the bank is the proper agent, and the only legitimate agency for the issue of a trade currency, has a genius for going astray.

The requirements of a sound currency are few and simple—the operations under which it performs its mission are, however, extremely complicated. Broadly defined, these requirements may be said to be:

1. It must represent value.
2. It must be redeemable in a fixed and accepted standard—in gold.

THE DEFINITION AND HISTORY OF TRUST COMPANIES.

[A paper read before the Chicago Chapter American Institute of Bank Clerks, by Clay Herriok, President of Cleveland Chapter, and Assistant Treasurer City Trust Company, Cleveland.]

We are to confine our discussion to-night to two topics, the definition of trust companies and an outline of their history.

It must be observed at the outset that it is quite impossible to give a description of the trust company that will truly describe all institutions known by that name. The laws of the different States vary widely in the functions which they allow these companies to exercise. And even in the same State, it is not unusual to find some companies in the possession of charters granting powers quite different from those given to other companies. In my own State of Ohio, for example, trust companies incorporated some years ago are allowed a much wider range of privileges than are those of recent years. Aside from the law in the matter, different companies are constrained by the peculiar conditions of their location, of the line of customers whom they serve, of the customs of their neighborhood, and of the business that most naturally and easily comes within their reach, to do the bulk of their business along various lines.

Hence we find some companies doing a business that is mainly that of the ordinary Savings banks; some add to this a large commercial business, including, in some States, the discount of paper; to these functions some add a considerable business in the handling of the affairs of corporations, as fiscal agent, registrar, transfer agent, intermediary in the formation or reorganization of corporations, the holding of funds or papers in escrow, and so on; and others have a large responsibility in the care of estates and in the performance of sundry duties, as trustee for individuals, companies, syndicate managers, etc. In a few instances, mainly in the East—in one case here in Chicago—trust companies restrict their operations to those which are trust functions as distinguished from ordinary banking functions; but instances of this are becoming fewer, and the growing tendency of trust companies to encroach upon every department of the banking business except that of note issue is causing an increasing amount of apprehension on the part of officers of both State and National banks.

It is evident, therefore, that to call an institution a "trust company" is to describe its exact functions no more than one could describe a manufacturing concern by calling it a "manufacturing concern." It might manufacture pins, or locomotives, or paper dolls, and still be a manufacturing concern. So a company may be a Savings bank, a commercial bank, a manager of estates, a safe deposit company, a title insurance company, a trustee for individuals and corporations, and so forth, and be called a trust company. It may be two or more of these, or all of them, and be a trust company.

WHAT A TRUST COMPANY IS

Nevertheless, it is quite possible to define a trust company in a way that correctly describes its distinctive features, because we may take these companies at what they are potentially—at what they may be if they please and can get the business.

With this in mind, we will say that a trust company is a corporation empowered to exercise, in addition to ordinary banking powers, a large number of fiduciary or

trustee functions. The name "trustee company" would better describe its character. It may undertake practically any duty that one man is apt to entrust to another in regard to financial matters; and in some States may even act as the guardian of the persons of minors or incompetent adults. It has been aptly styled "The department store of finance."

The typical trust company is divided into departments, the most usual division being a three-fold one, into banking, trust and safety deposit departments. In some companies, these departments are again subdivided. Other departments sometimes found are the bond department, for the sale of bonds and other first-class securities; the escrow department, where money, property or papers are held to be delivered to a third party upon the fulfillment of certain conditions; the real estate department, in which the company acts as agent to buy, sell, rent or manage real estate; the title insurance department, for the insurance of titles to real estate; the fidelity insurance department, in which the company acts as surety on bonds. The two functions last named are not, in most States, undertaken by trust companies, but are carried on by separate title insurance or fidelity insurance companies. But one of your large companies in Chicago combines the trust and title insurance business, and many trust companies in Pennsylvania include fidelity insurance.

VARIOUS FUNCTIONS OF TRUST COMPANIES.

Of course, the department which gives to these companies their name, and that which distinguishes them from banks proper, is the trust department; and this is the only one which we need consider at all in detail. The functions of this department are many and various, and we have time to name only a part of them.

Courts are authorized to appoint trust companies as administrators and trustees of estates, and they may act as executors and trustees by appointment under will. In these capacities, the company takes entire charge of the estate just as an individual would. The fees are never more than are allowed to an individual acting in a like capacity, and are fixed by law, varying somewhat in different States.

Trust companies may be appointed guardians of minors and conservators or committees of estates of insane or feeble minded adults; and in some States may be guardians of the person as well as of the estate. Such companies may also act as assignees of failed concerns, or as Receivers of embarrassed ones; their duties in such cases being the same as would devolve upon individuals having such appointments.

An important field of work which is coming to be almost exclusively in the hands of trust companies is that as transfer agent and registrar for stock issues of corporations, whose stockholders are thus protected against any overissue or irregularity of issue of stock. These companies are quite commonly trustees for bond issues, certifying to the genuineness and regularity of such issues. The public seems to be not always aware that a trust company, acting in any of the three capacities last named, makes no guarantee of the payment or value of such securities, its guarantee extending only to the genuineness of the documents and the regularity of the issue.

The cases in which trust companies are called upon to act as trustee or agent under private agreement are numerous and diversified, including services for States, municipalities, railroads, individuals, partnerships, committees and corporations. Very often they are called upon to hold money or papers in escrow, pending the performance of contract between the original parties. Voting trusts, syndicate managers, individuals or committees acting as temporary trustees find them useful fiscal agents. In bond issues they are made agents for the payment of coupons. Their services are utilized for the collection of stock or pool subscriptions payable in installments as called, and for the distribution of funds in similar cases.

Individuals use the trust company in an increasing number of ways. The man who on account of advancing years feels himself losing the power to look after his own interests in the best manner finds in such a company a capable and responsible agent. If he contemplates a trip abroad or a winter in the South or in California, the trust company will look after his affairs in his absence. The uncertainty of having one's will carried out as intended has led to a growing custom of turning over a part or all of one's property to a trust company under a trust deed, thus doing away with the possibility of litigation over a will after death, as well as avoiding the worry of business in old age.

Widows, married women and others not accustomed to business place their affairs in the hands of the trust company, and thus receive an assured income without the risk and anxiety that would come with an attempt to look after them in person.

Most Eastern trust companies, and some Western ones, as those in St. Louis, carry on a considerable business in the financing and promotion of enterprises. This has not been done by Chicago companies, and I find that the feeling here on this question is quite conservative. Undoubtedly it is a field of effort that requires great care if the company is to be always on safe ground. A certain part of this work may, however, be undertaken with no element of risk. When a new enterprise is proposed, someone in whom the public has confidence must investigate it and report, or else each prospective investor must go to the expense and effort of investigating for himself. Someone must see that the new corporation actually has the property it represents itself as having; that its title is good; that the securities offered to the public are correctly drawn and that they offer real protection to the purchaser; in short, that the whole proposition is legitimate and made in good faith. This service the trust company may perform with no risk, provided, of course, that it does not assume any guarantee for the payment of the securities. Regarding the other things that may be done there is more room for discussion—the placing of the securities among the “camp followers,” and the subscription to a larger or smaller amount of them by the company itself.

Without pretending to cover the entire ground, we have by way of definition stated some of the things that a trust company is. The attempt has been to state what it actually is in practice—not what it is in theory or in the original intent of trust company legislation. And please note that it is a temporary definition only, but one which I have tried to bring up to date. While the theory is the same, in actual practice the trust company of to day is not exactly what it was ten years ago, as one may perceive by reading a description of one written at that time; and it is probably not just what it will be ten years hence. So rapidly do we move in these strenuous days!

THE HISTORY OF TRUST COMPANIES.

It will now be interesting to take up the second part of our subject and to trace in outline the history of trust companies. To the student of history, who is accustomed to trace the growth of institutions through a series of generations or centuries, or even of thousands of years, the development of the trust company is little short of marvelous. As has been stated frequently, this development has come within the past seventeen years, and much of it within the past ten years. This is true, as we shall see, in spite of the fact that a few such companies existed as far back as the third decade of the nineteenth century. Prior to 1885, the encyclopedias—supposed as they are to contain information regarding everything of more than mere local interest—did not even mention the term “trust company.” The Trust Company Section of the American Bankers' Association was not established until 1897. Ten years ago a prominent trust company official called attention to the

fact that "There is not to be found fifty pages of literature concerning trust companies," and, aside from circulars issued by various companies as advertisements, the statement would not be much of an exaggeration to-day.

Two companies claim the distinction of having been the first trust company in the United States—which means the first in the world, since these institutions as we know them have not been developed elsewhere. These are the Pennsylvania Company for Insurance on Lives and Granting Annuities, and the Farmers' Fire Insurance and Loan Company, now the Farmers' Loan and Trust Company, of New York.

Gathered about a table in a Philadelphia coffee-house—the club of those days—in the winter of 1809, a party of gentlemen determined upon the formation of a company for insuring lives and granting annuities. Three years later—in 1812—the charter was secured, and the company began a business which steadily grew. During the first twenty-four years, however, its business was in no sense a trust business as we know it, the functions exercised being along the lines indicated in the name of the company. The question of taking up trust functions was first considered in 1839, and then the suggestion came from India. Institutions called "agency houses" had been in operation there, which transacted business for trustees or individuals, received moneys on deposit and administered estates. The Pennsylvania Company decided to get its charter amended, if possible, so as to permit the undertaking of a similar line of business. It was not successful in doing this until 1836, when the Legislature authorized it "To accept and execute trusts of every description. To be appointed trustee, assignee, guardian, committee and receiver. To receive moneys or other property, real or personal, in trust or on deposit, to accumulate the interest thereon, or to allow and pay the same."

The same powers were given in the same year to the Girard Life Insurance, Annuity and Trust Company. Power to act as executor and administrator was not given to the Pennsylvania Company until 1853, nor to the Girard Company until 1855.

Not until 1865 did these two companies have any competitors in the State. In that year a decided boom in the formation of trust companies in Philadelphia began, which spread over the State, and during the next eight years thirty-seven or thirty-eight charters granting trust powers were given; but none of these companies appear to have engaged in the trust business at this time. This period marked the separation of trust business from that of insurance, and the two lines began to be conducted by distinct companies. The undertaking of fidelity insurance by Pennsylvania companies was also begun at this time. The Pennsylvania Company has continued in increasing prosperity down to the present time, having now deposits of some sixteen millions, while its trust funds exceed one hundred and fifty millions. Its original capital of half a million has been increased to two millions.

It was in 1822 that the Farmers' Fire Insurance and Loan Company was incorporated in New York city, "as well for the purpose of accommodating the citizens of the State residing in the country with loans on the security of their property (which cannot now be obtained without great difficulty) as to insure their buildings and effects, and those of other persons, by loss from fire, and also for such other useful purposes as are hereafter specified. Later in the same year the company was given power to accept and execute all lawful trusts created by deed or devise.

Thus while the Pennsylvania company was incorporated ten years before this New York company, the latter received power to engage in the trust business fourteen years before the Pennsylvania company, which, as already stated, did not receive the grant of such powers until 1836. It thus appears that the Farmers' Loan and Trust Company of New York may fairly claim to have been the first company to actually receive trust powers, while to the Pennsylvania Company for Insurance

on Lives and Granting Annuities may be granted the distinction of having been the earliest to incorporate.

The New York Life Insurance and Trust Company was chartered with trust powers in 1880; the United States Trust Company in 1853, and the Union Trust Company in 1864. In 1884, sixteen such companies existed in the State of New York. The first trust company in Boston, the New England Trust Company, was chartered in 1869.

The oldest trust company in Chicago, which is also the oldest bank in the State—the Merchants' Loan and Trust Company—was chartered in 1857; but while it acted as trustee in a few cases in early years, it did not establish its trust department until about three years ago.

Time does not permit of our following the history of trust companies from the beginning down to date. If it did, we would only be impressed the more with the fact that the trust company movement, as we know it, has practically been developed within the last score of years. These early companies did not do a large trust business; and their number was so small that they were hardly a factor in the financial world. Their peculiar powers were not "considered of sufficient importance to constitute an independent business of itself, or to establish a peculiar institution." As we have already seen, the business was for long years regarded as merely a minor function of insurance companies, from which it was not separated until after the Civil War. Like the insurance business, too, the movement began as a semi-philanthropic enterprise.

Along in the eighties, trust companies began to attract some attention, and during this decade a large number of States passed general laws providing for the incorporation of such companies, or revising the laws already in existence so as to more clearly define the powers of these companies. This was done in Pennsylvania in 1881; in Ohio in 1883; in New York and Illinois in 1887. An excellent study of this whole question with tables showing legislation on the subject, has been written by George Cator, published by the "Johns Hopkins Press," Baltimore.

GROWTH OF TRUST COMPANIES AND ITS CAUSE.

The phenomenal growth of trust companies during the past ten years is strikingly shown in an article in the "Review of Reviews," for November, 1902, by Charles A. Conant, on "The Growth of Trust Companies." As there shown, the number of such companies in the United States increased from 171 in 1891 to 417 in 1902; their capital, from 79 millions to 179 millions; their deposits, from 855 millions to 1,526 millions. That is, the deposits have multiplied more than four times in ten years! And the larger part of this increase has been since 1897, or within five years. Comparing the growth of trust companies with that of National banks in New York city, Mr. Conant's figures show that in the five years from June, 1897, to June, 1902, the individual deposits of the clearing-house banks increased from 597 millions to 960 millions, or forty per cent.; while those of the trust companies increased from 805 millions to 761 millions, or 150 per cent. The percentages are a little misleading, since the trust companies were just beginning their development in 1897, while the clearing-house banks were established institutions. The relative growth is better seen by comparing the actual gain, expressed in dollars. That of the clearing-house banks was 363 millions, while that of the trust companies was 455 millions.

While it is true that the New York trust companies have made greater strides during these years than those of most of the other cities of the country, these figures show what may occur elsewhere, and explain why trust companies are beginning to attract so much attention. The report of the Comptroller of the Currency for the year ending June 30, 1902, shows that the capital and surplus of trust companies in

the Eastern States was 229 millions. The Middle States came next, with 60 millions; then the New England States, with 35 millions; the Southern States, with 17 millions; the Pacific States, with 6 millions, and the Western States, with 1 million.

If we seek the causes of the growth of these institutions, I think that we shall find them in the tendencies of our age. The trust company does not mark a revolution in our financial institutions so much as it marks an evolution. It has grown because it met a distinct need of the people. It cannot be separated from other growths and tendencies of these first years of the twentieth century, with which it is closely interwoven. It makes possible the large enterprises of the age, and, on the other hand, it is made possible by them. It enables a large number of persons of moderate means to co operate and share in the results of great undertakings, and thus meets the people on the one side and enterprises which concern the public on the other. I think that we cannot fully appreciate the trust company until we understand that it is not merely a machine for the earning and paying of dividends, but is a factor in the promotion of a better civilization.

One writer has called the trust company "The highest form of business yet devised." In closing, I cannot do better than to quote his words: "Trust companies are formed for the execution of the most sacred duties that can be imposed by man. The care of the property and welfare of the helpless and dependent, the widow and orphan, the feeble and ignorant ones, who are such an easy prey for the unscrupulous, is part of their mission. To carry out the wishes of the dead, who put faith in the company, and entrusted their dearest interests to it for years, in the belief that it always would be true and honest; to meet the expectations of the living, who entrust their property to it in full confidence that it always will be faithful and capable; this demands a conscientiousness and thoroughness, which must always serve as a high ideal and inspiring stimulus to right-minded men."

BANK CLERKS' CONVENTION.—A convention of chapters of the American Institute of Bank Clerks will be held at Cleveland, Ohio, September 18 and 19.

The committee of arrangements having the affair in charge is made up as follows:

F. I. Kent, chairman, Chicago Chapter, First National Bank, Chicago.

S. Ludlow, Jr., secretary, New York Chapter, Fourth National Bank, New York city.

Alfred M. Barrett, treasurer, Alexander Hamilton Chapter, Western National Bank, New York city.

D. C. Wills, Pittsburg Chapter, Mellon National Bank, Pittsburg.

E. E. Kehew, Pittsburg Chapter, Keystone National Bank, Pittsburg.

Clay Herrick, Cleveland Chapter, City Trust Company, Cleveland.

C. W. Dupuis, Cincinnati Chapter, Western-German Bank, Cincinnati.

J. C. Fenhagen, Baltimore Chapter, Merchants' National Bank, Baltimore.

R. M. Richter, St. Louis Chapter, International Bank, St. Louis.

An interesting programme has been outlined, consisting of papers and addresses on banking topics, a joint debate between representatives of several chapters, a banquet and other entertainments and amusements. Great enthusiasm in the convention is being manifested, and the outlook for a successful and valuable meeting is most promising.

NEW JERSEY TRUST COMPANIES.—State Banking and Insurance Commissioner Watkins issued a statement on July 28, showing the condition of fifty-seven trust companies in New Jersey on June 30. The resources are given at \$183,458,963, an increase over December 31, 1902, of \$20,075,803. The deposits aggregate \$97,443,928, an increase for six months of \$14,850,820.

THE COST OF ASSET CURRENCY IN CANADA.

In any discussion that has for its subject the advisability of a change in the currency system of a great nation it is particularly desirable that a most liberal account be taken of the expenses and drawbacks likely to be met with in connection with the innovations that are proposed.

This paper has a two-fold object: it is purposed to give, first, a rough summary of the not quite so well-known expenses incidental to the maintenance of the Canadian bank note circulation; and then to show that note issue against assets will earn its full profits only when associated with a system of branch banks, and to give some reasons why it appears to the writer that the redemption and removal of superfluous currency issues, which is so necessary to healthful working, might not proceed in the United States with the automatic promptitude that obtains in Canada.

In a general way, the Canadian public has the idea that apart from a small proportionate cash reserve, the banks loan out the amount of their note circulation at something like five or six per cent. per annum, the only charge against these profits being the cost of the printing of the notes. Others expenses properly chargeable against the profits of note circulation are: extra transportation costs, and salaries for extra work.

To create a vacuum for its own notes to fill every branch bank collects and sends in for redemption all the notes of other banks on which it can lay its hands. For branches outside of the reserve cities there is here the expense of continually shipping these notes to a point where redemption will be made, and a loss of interest until the funds are actually collected from the respective issuing banks. The branches of a bank which are always shipping in sundries must be supplied in return with the bank's own notes. There is, therefore, going on all the time in Canada a cross flow of currency—notes coming into the centres for redemption; with others exactly similar going out to take their places. The cost of this cross-flow is an expense peculiar to the asset currency system. It sometimes happens that this double transportation cost is incurred for the sake of a note circulation lasting only a couple of days. In a great many instances, however, when the notes issued by one branch wander far afield they drift into the territory of a second branch; when this occurs, economies in transportation are often effected.

It is not intended here to draw the inference that these and other expenses outweigh the profits derived from the Canadian bank-note circulation; the fact that the business, with its attendant expenses, is vigorously pushed to the limits authorized, is proof positive to the contrary.

The branch manager's incentive in actively withdrawing from circulation the notes of other banks and replacing them with those of his own, is to get credit with his head office for being influential in increasing the bank's circulation. Diligence and zeal exercised in this direction are noticed and rewarded promptly, just as the same qualities are rewarded when through their employment the bank's deposits are increased or its loans extended.

In Canada, then, there is direct profit derived by each bank from the process of withdrawing from circulation the notes of its competitors. This point should be noticed; it will be referred to later.

As to the exact proportion of these transportation expenses deserving the term extra, that can be arrived at readily by American bankers familiar with their own expenses for transporting currency under the present system.

Next, as to the manner in which the Canadian bank-note circulation entails additions to bank salary lists. In the reserve cities the laborious daily sorting out of every dollar of cash receipts calls for extra work in the telling boxes. Every day in each busy bank, twenty, fifty, a hundred thousand dollars and more in fives and tens must be divided into from ten to twenty-five bundles—every bank note sent into the bank that issued it or into its redemption bank. Then there is the signing of new notes, and the care of worn-outs; in the head office of a good sized bank these duties will provide steady employment for a senior officer for six months or more in every year.

The foregoing comprise the chief costs and expenses chargeable against the profits earned by the Canadian bank-note circulation; concluding them, it should perhaps be mentioned that it is the custom of the banks to lend on the New York call money market a portion of the funds derived from their note circulation. Especially is this the case when note issues expand violently during crop-moving time. New York is selected, of course, because the funds can be readily called in without creating disturbance. The fluctuations in New York call rates have therefore some influence on the profits from bank-note issues in Canada.

In maintaining a note issue consisting of asset currency the isolated banks of the United States would work at a disadvantage compared with the branch banks of Canada—first, in the matter of securing the notes. The peculiar circumstances prevailing in Canada makes it possible to secure the bank circulation by means of a deposit with the Canadian Treasury of five per cent. of the total note circulation—the banks receiving three per cent. interest on this deposit and undertaking to replenish the fund whenever it is impaired. As the notes of failed banks are a first charge on all its assets, the liability to loss is not considered of moment. Through the Bankers' Association, supervision is exercised over the note issues of all the banks. On account of the vast number of banks in the United States that must participate in any note issuing scheme, American bankers quite naturally would prefer to secure the general note circulation by means of a safety fund accumulated from annual payments by each bank, of one-eighth per cent. or more on its average circulation—this contribution made, the liability of solvent banks for notes of failed competitors to cease. Such an annual contribution would be a disability from which the branch banks of Canada are free.

Next, the cost of the redemption agencies which would be necessary to keep the new asset notes floating at par all over the United States must be considerably enhanced when there does not exist in the different districts numerous friendly branches to take care of and to utilize such notes as come into the neighborhood.

The new addition to the country's currency would be a hopeless mixture; the labor of sorting out, finding and making presentation to the redemption agents, or the issues of the notes, would be unending. Instead of thirty-five banks issuing notes, as is the case in Canada, there would be thousands. In a teller's receipts for the day there would be the notes of many hundreds of banks, scattered singly or in twos and threes throughout the pile. If redemption is to proceed as it should proceed, the labor and cost of this sorting out, and of the long journeys necessary to send the notes to their respective homes, would have to be faced. It could not fail to be greatly in excess of what Canadian branch banks are called on to pay.

Under these circumstances, it is at best an open question whether or not the trouble would be taken to force redemption. Unless there is profit to be gained it seems likely that trouble and labor would be avoided. In Canada, as we have seen, each bank gains directly through shoving its own notes into the vacuum caused by the withdrawal of those of its competitors; but if an American bank is already circulated to the maximum, as many of them undoubtedly would be throughout the year, there would be nothing to gain from the withdrawal and redemption of other

banks' notes. The probability is that in seasons of pressure for currency the asset notes would be kept in the vaults of banks that received them, and paid into circulation again as the occasion arose. This would be quite right and proper; and would be meeting the very emergency for which the new notes were devised. But what would happen when currency was over-plentiful? Would not the country banks ship these notes, indiscriminately mixed with other currency, to reserve banks in New York, Chicago, or other centres?

And when they arrived what would happen to them? Would the New York banks or the Chicago banks go to work and sort out the mass and force redemption? Or would they store the notes in their vaults and against them increase loans and deposits?

Until the details of any plan that may be adopted are known, it is idle for any man to prophesy as to what would take place. In Canada, circumstances are such as to compel the banks to employ the funds derived from their note issues in liquid investments—in advances on the checks and sight drafts, through the agency of which internal trade is largely financed and the exports carried to the seaports; and in call loans abroad, available at a day's notice. In the United States it might be necessary to devise means either of compelling redemption or of making it profitable; if it should be materially delayed or restricted through the extra cost and labor involved, there would be danger of the banks employing the funds in advances of a more or less permanent nature.

H. M. P. ECKARDT, *Merchants' Bank of Canada.*

MONTREAL, Quebec.

THE FINANCIAL SITUATION.—Hon. A. B. Hepburn, former Comptroller of the Currency, and President of the Chase National Bank, New York city, discussing the financial situation on July 28, said:

"The country has undergone an era of great and genuine prosperity. As is always the case, advantage is taken of such conditions to promote a great many securities at greatly inflated values. That has been the experience of a great many people in the last three or four years. We have gone too far and too fast. Credit has been too much extended. We have been doing too much business for our capital. A hardening process which subjected securities to a level that would determine their proper value was bound to ensue, and is now in progress throughout the country.

The public and banking interest generally became skeptical, credit was withdrawn, and liquidation became inevitable. As is always the case under similar conditions, people sold their best securities when the crash came, because their others were unmarketable. They did this to meet commitments on what have recently been characterized as 'indigestible securities.'

Under this pressure railway shares—some of them—have depreciated to a point where, as an investment, they are attractive. Doubtless other securities on the list will be subjected to pressure, receding in value until they reach the investor's point. Later the commercial and industrial interests of the country will doubtless undergo a similar experience. Those who have made mistakes financially must suffer financially. People who are too much extended will very likely come to grief. General business conditions, however, are in excellent shape, the crops are so munificent that it will be impossible to produce anything like a financial or commercial crisis, and people will have ample opportunity to put their houses in order. Those who fail to heed the warning with which the atmosphere is surcharged at this time will surely come to grief. The stock market has fallen fifty points without serious panic or complications, and the business interests of the country will have equal opportunity to conform to any fall in prices or any reduction in the volume of trade."

* THE PRACTICAL WORK OF A BANK.

INCREASING THE NET EARNINGS.

V.

There are two general lines to follow in attempting to increase your net earnings—prudent economy and judicious extension of business.

To manage most economically, one must be master of every detail in the work of those under his charge. It is well to study their every action and to keep in close touch with the most insignificant item until your working force is so thoroughly imbued with the idea that waste of time and needless expense figure in the net profits as surely as do the earnings computed by the discount clerk. No one is more aware of the progression of the "penny-saved" idea than is the banker, and at least one has employed and encouraged that system to a high state of perfection. He never mails a letter on Friday to his correspondent six hundred miles away, because the Friday and Saturday letters would reach the desk together Monday morning, and his method of writing only the Saturday letter saves his bank two cents per week, in addition to the stationery. Two cents a week, during the twenty years' existence of the bank, has amounted to twenty dollars, and the net profits are actually that much more than they would have been. He buys his winter fuel in the summer time, when it may be had some cheaper; pays his light and water bills by the year instead of per month. Outside of the bank he is generous and liberal, almost to a fault, but he regards bank dealings as a sacred trust, and each year he tries to exceed the profits of the foregoing one. There are economical methods, which, instead of developing gross churlishness, rather encourage the avoidance of unnecessary waste and extravagance. Many bankers have learned that by the introduction of carbon-paper stationery, they could save the labor and salary of one or more clerks. The new systems of balance books and ledgers and the introduction of labor saving devices and methods have made dollars quickly for those bankers who have carefully investigated the workings of each, selecting such as were best suited to the circumstances and needs of their own particular office. Expense, alone, is not to be considered, for profits or benefits are not always to be reckoned in cash. The degree of ease and efficiency with which work is accomplished and the appearance of it must be taken into account. A banker must use his judgment in purchasing stationery and appliances—even pens and inkstands—and it is well to remember that the cheapest are less frequently the best.

Continual exhortation to frugality with bank property among your clerks, if conducted in a reasonable way, will have its effect on the profits of your institution and will entail greater respect from your directors. The clerks will, in the end, regard you, not as "terribly stingy," but as working for the interests of your bank with heart and strength.

SAVING NEEDLESS EXPENDITURES.

In order to stimulate economy in his force, the manager of a large bank told his clerks to each try to suppress some leak or useless expense to the extent of one cent

* A series of articles to be published in competition for prizes aggregating \$1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

each day. This saving was not to enter into the profits of the bank, but was to become a fund toward a library for the employees. For three months each clerk reported his penny saved to a certain clerk who kept a close record, and the amount thus determined for each month was thereafter regularly paid by the bank into the library fund. Some of the clerks saved a number of pennies and some were unable to show a saving, but the amount easily proved ample. This spirit led to the discovery and correction of other leaks and needless expenditures of which the earnings henceforth received the benefit.

It is argued that stringent economy is a waste of brain power that overbalances the material proceeds. There is, however, so little danger from this source that it need not be discussed here. The natural tendency, more or less, toward prodigality acts as a safety valve to the economical machine. In many banks the question of economy is scarcely considered, and in these it could be made to swell the profits measurably.

PROFITABLE EXPANSION OF BUSINESS.

Saving is here given first attention among the opportunities for increasing earnings because it trains the mind and eye to details that will be of inestimable value in the pursuit of new business where results in the profits are more specific. There success requires acute faculties and shrewd judgment based on experience. In order to extend business relations a careful and an exhaustive study must be made of the surroundings, and actions had accordingly. A bank that had been running for years with a large portion of its money out only half of the year to a certain class of cattlemen, found that by establishing a branch in another location it could use the funds of the idle half in the fisheries of the new section. Thus by safe and careful management it was enabled to keep operating a greater portion of its funds and wrote up handsomely increased profits. Not every bank is thus favorably situate and it is more often the case that a larger deposit account is necessary before extended discount relations may be considered. Usually banks under such conditions resort to paying interest on term deposits, or, if already using that plan, they raise the rate a trifle and thus entice deposits to their savings department.

A unique method has been launched in certain cities where banks furnish depositors with toy (?) savings banks and thus institute a saving spirit among people who are not yet as valuable customers as they have the opportunity to become. There are places where this method succeeds and has increased the bank's deposits a substantial per centum.

Where opportunities offer, large deposits may be gained by electing your men to offices of treasurer of governmental or private affairs. Soliciting accounts is, by some, considered in an unfavorable light, but competition is antiquating the idea. Directors frequently find that, in the soliciting of accounts, some social coldness or incompatibility prevents their officers from securing valuable accounts that are oftentimes otherwise naturally inclined toward the institution. A few timely remarks will usually dispel these illusions and swell deposits largely. Neat offices, courteous treatment, attractive clerks, separate departments for ladies, all have their proportion of influence in enticing business. Life and fire insurance as well as notary public work enter into and become a prolific source of revenue for many banks.

BANKING CONDITIONS IN THE CITY AND COUNTRY COMPARED.

While large city bankers meet with fierce competition, they are more than country bankers in the position of being sought by business. Their mission is rather to discriminate from what is offered. They are told by influential men, in position to know, that the South American countries offer unbounded fields for enterprise and capital, and all classes of schemes and propositions are spread before them. They

are told by men on the ground that the Philippine Islands are stagnating for want of facilities for transportation and banking. Their earnest attention is called to the exceptionally favorable Russian and German loans. Theirs is to make reply. Choose ye, choose ye the best from the better.

The country and the inland bankers are usually aware of all of their latitude in the matter of extending business relations, though not always do they take advantage of it. They know what is needed here and what improvements would facilitate certain other enterprises. They can readily foresee how the introduction of new methods, or new legislation, would affect their profits. Some do not neglect ripe opportunities, but most are content to go on aiding their substantial customers and occasionally seeking new ones as their accommodations may permit. They view the wholesale city bankers much in the light of demigods and they marvel that some boy, whom they outclassed at school, has now become the all-powerful executive of a great bank in a large commercial center. Then they look about them with a view to extending their own relations, and long for broader fields and greater opportunities. Some now seize those neglected and dormant for years and commence to build up connections, which, had they been established earlier, would now be highly respected.

Look about you! Place some worthy young man in partnership with that antiquated beacon, who is content to work along at small wage, where, with more energy, large profits might easily be his. The new relationship, if instituted rightly, will prove of immense benefit to the junior and senior members, and your own profits will likely receive a corresponding stimulus. In another place you may find a partnership that is working mutual disadvantage. Advise and facilitate the overcoming of the fault, after having first looked into the future to learn the results of the change and the prospects under the new conditions.

BANKS ACTING IN AN ADVISORY CAPACITY.

The matter of giving advice may be made conducive to much good. No banker can afford to lose the patronage of a customer, who first seeks his advice, and by exerting faithful efforts to establish an honorable record as a counselor you will add to your number of customers and will increase your net earnings in proportion. The country banker acts in an advisory capacity to his clients, the banker of the larger town to the country banker, and in turn the city bankers, who really become specialists in certain lines, are enabled to give the smaller city banker the benefit of their wider experience. The cordial good will, so unceasingly shown in this chain of dependency, knits in closer union the bonds that exist among bankers and their clients, and it behooves each grade to advise with great care and earnestness. Bankers who place themselves in positions where they are enabled to offer expert advice, backed with substantial assistance, can hold their clientage and gain new customers far easier than in any other manner.

A striking example of a bank being able to cater to every class is offered by a Western bank that chooses its seven directors from the seven most prominent industries and professions in the section over which it has jurisdiction. Grain, lumber, packing, railway, live stock, real estate and insurance fields are represented by men at the head of each profession and that bank's executives are able to act on or furnish expert advice to any customer who may be in need of it. As a consequence the scope of its relations is unbounded and the handsome business it enjoys very noteworthy.

RULES IN MAKING LOANS.

As loaning is the most important feature of bank management and the results therefrom the most conspicuous profits or demerits, a simple rule to follow will not be unthankfully received. Remember, always, that you do not necessarily have to make this loan—not even to your brother. No, not even to yourself. If it does not look right, drop it.

IF YOUR RATE IS SIX PER CENTUM, ONE BAD THREE MONTHS' LOAN WILL CONSUME THE PROFITS FROM SIXTY-SEVEN GOOD LOANS UNDER LIKE TERMS; AT FIVE PER CENTUM, ONE BAD LOAN CONSUMES THE PROFITS OF EIGHTY-ONE GOOD ONES, AND AT FOUR PER CENTUM, ONE HUNDRED AND ONE GOOD LOANS SUFFER.

Paste this over your desk and invariably read it before making a loan. Your net earnings will be written greater and your "gone wallet" will shrivel with leanness.

Manage your bank with thrifty economy, keep wide awake to every opportunity around you, and consider carefully your advice and actions. These ends striven for, your ambition will be higher, your happiness fuller and your success greater. Try it.

PROF. IT.

A CREDIT CURRENCY.

[Address of Hon. Charles N. Fowler, Chairman of the Banking and Currency Committee, House of Representatives, delivered at the annual banquet of the Michigan Bankers' Association, Pointe aux Barques, Mich., June 17.]

It is well for us to prepare in these times of prosperity and apparent rest for the dangers that overhang the commerce of this country, and I to night will try to plant here and there a milestone, which to you ought to be an interrogation point, from which to start to investigate for yourselves whether perchance I suggest anything of value.

First, I want to call your attention to this fact that it is wholly immaterial whether our country produces one million dollars' worth of gold or one million dollars' worth of beet sugar or iron; in other words, that a country does not accumulate gold because it produces it. Remember that. From 1860 to 1879, including what we had in 1860, there was a billion of gold produced in this country, and yet we had nothing with which to resume until we proceeded to resume. It all disappeared. From 1880 to 1896 we produced in this country 700 millions of gold. We saved about 247 millions of it. That is milestone No. 1.

The second one is this: That it is wholly immaterial as to the balance of trade in your favor, how much gold you have. I have heard many men say, since 1897, when we passed the Dingley Bill: "We have got the balance of trade in our favor; we shall fear nothing." As a matter of fact it is wholly immaterial whether you have the balance of trade in your favor. Milestone No. 2. Remember that.

We produced eighty millions of gold last year, and the credit balance in our favor was 500 millions, yet we are shipping millions every week. From 1870 to 1902 there was a balance of trade against Germany of four billion dollars, and yet Germany increased her gold every year if she wanted to and did not produce any gold. From 1870 to 1902 the balance of trade against France was four billion dollars; she produced no gold. From 1870 to 1890 the balance of trade against Great Britain amounted to twenty six million dollars; she produced no gold and yet had all the gold she wanted.

How does a country get its gold? It buys it; buys it precisely as a merchant buys commodities that he sells to his customers. That brings me to milestone No. 3, that so long as a demand obligation of this Government remains out in such quantity as to make it possible daily to withdraw gold from the Treasury, there is no certainty that any gold will remain in this country at all. Why? Because when the Government has a long line of demand obligations, they may be presented every day and the Government compelled to pay out gold for those demand obligations. From an economic point of view, the Government is giving the gold away. Now, follow me; giving it away because it simply gets the face of the gold back; for, economically speaking, the price of gold is the use of gold overnight; in other words, the interest on the gold from day to day, and so long as the Government gives it away, not being a money lender and therefore not able to charge a rate of interest for the use of the gold, the Government is giving away the gold to the world, and we are the only nation giving away gold to any person or Government elsewhere. Therefore, you can rest assured that there will be no time of commercial security in this country until the burden of buying this gold is thrown upon the banks, and the banks themselves test their credits with gold. There is not an

obligation in the United States to-night, not one, that any must prove, that you must bring in the gold to prove, not one; but the Government must prove its notes in gold and pay some of its bonds in gold, but as a question of legal tender you can prove it in silver at fifty-five cents on the dollar, and you can prove it in United States notes, which are worth no more than the paper, unless the Government proves it by furnishing the gold. Therefore, I assert without any fear of successful contradiction, that never can there be in trying circumstances security until the demand notes are retired, and the banks are compelled to furnish the gold and not the Government. Milestone No. 4.

A CREDIT CURRENCY NEEDED.

We need in this country a credit currency. Now, what is currency? Money may be used for currency. There is in the United States no currency, except the gold that is in it. Why? Because the silver is measured in gold; because the greenback is measured in gold; because every obligation in this country is measured in gold, and the only money in this country is gold. Now, what is the currency of the country? National bank notes, silver certificates, greenbacks and the checks and drafts of the country; all of them currency. About eighty per cent. of the business of this country, amounting last year to \$120,000,000,000, about eighty per cent. of it is transacted in checks and drafts, the rest of it in coin or some form of currency. There is nothing in this country to-day that prevents the banks from naturally and automatically furnishing the checks and drafts for the eighty per cent., but how do you get the currency above the eighty per cent.? You haven't any way of getting it. It is a fixed quantity. When you go to Canada, we find that in the fall when the crops superinduce a greater demand for money, the banks pay out \$3.40 for every man, woman and child, or ten millions of dollars, and that ten millions disappear precisely as the checks disappear in this country, which is precisely the same as if you draw a check to do some special thing. The same thing is true of Germany with its population of 56,000,000; they turn over four times a year one hundred millions of currency, in and out, the same as checks and drafts. In the United States we are 80,000,000 of people, and if we had a proper system of currency, there would go in and out somewhere from 160 to 225 millions of dollars. In other words, when it should increase it decreases, and when it should decrease it increases. Now, I think I am not going too far when I say that in the minds of intelligent men in this country, everywhere, there is to-day a conviction that there is something wrong. How do you know? Because from the first day of July to the first day of December every year there is somewhere from three and one-half to four billions of products superimposed upon the business of this country, and while you can prepare for it with checks and drafts—for that part of the work that can be done with checks and drafts—there is no machinery to increase the currency of this country one dollar. You are just as much in need of the increased efforts of the banks to do this business as you are in need of the cars to carry to the market and dispose of the products of the country.

SAFETY OF ASSET CURRENCY.

Now, if such a thing is desirable, and I assume that every man, practically, who has studied this question, admits that it is not only desirable but necessary, you have a right to ask me, if you have not studied it—have not investigated it thoroughly enough to satisfy yourselves—whether such a thing could be safe, or not. The fact is, having heard so often that we have been doing business upon a different basis—the banks having to put up Government bonds to secure the circulation—that therefore we could not argue from the condition of the banks for the last forty years. So I went to the office of the Comptroller of the Currency and asked him to assume that every Government bond to secure the circulation had been lost, and not

a cent recovered, and with that loss the notes had been a first lien on the assets of the bank, how much of a tax would have paid the notes of the bank. A tax of 8-1000 of one per cent., imposed on all the notes of the banks outstanding, would have paid the notes of the failed banks—eight thousandths of one per cent.!

What does that mean? It means that a tax of one-half one one per cent. on all the notes would have lasted sixty-two and one half years; a tax of one per cent. would have lasted 125 years, and a tax of five per cent. that we proposed to put up as a preliminary fund would have lasted 625 years. Now, is there any man or woman here that is solicitous about his or her descendants 625 years hence?

I made another request of the Comptroller, and that was, that allowing the Government bonds to remain, and that they should not be a first lien, but just make a tax that would pay the notes of the failed banks, what the tax would be. The conclusion of the Comptroller of the Currency was that a tax of 22-100 of one per cent., a little over one-fifth of all the notes, would pay all the notes of the failed banks.

Now then, to answer the query of doubtful men, I investigated the condition in New England under the Suffolk system from 1840 to 1860. There was no banking system; they went into the backyard and printed or wrote out notes; there were no telephones, no railroads, and there was almost a perfectly free system of banking for each man, except that the Suffolk Bank, in Boston, had so far impressed itself on the banks of New England that no bank could do business, unless it redeemed its notes. In that twenty years, from 1840 to 1860, what was the result? A tax of one-fifth of one per cent. on all the notes would have paid the notes of the failed banks, proving that the system of compulsory redemption in gold and silver, from 1840 to 1860, in New England, was safer than the National banking system since 1863. * * *

Wherever the system of a credit currency has been invoked it has never failed, in this country or on God's earth. I challenge any man to point out a case where it has ever failed. I am sometimes confronted with people who say: "Well, don't you get kind of tired advocating currency reform?" I have always said I didn't expect to bring about this reform before there was some crisis, but I did hope to so far advance thought in this country that when the crisis came, and legislation followed the crisis, the American people would do the wise thing and not the wrong thing; and yet progress has been made, great progress when you consider this question. I well remember when I entered Congress. There was, as I remember, 126 Republican majority; 280 out of 356 members were Republicans. But three members made single gold standard speeches. I have lived long enough to see every man, woman and child in favor of the gold standard. I advocated the funding of the national bonds into two per cent. gold bonds eight years ago. I lived long enough to see that done and know that I helped do the trick.

DEPOSIT OF PUBLIC FUNDS IN BANKS.

I want to call your attention to another milestone. This is No. 5, and that is with regard to Government deposits. I assert that the Government ought to deposit its money with the banks of this country precisely the same as any great business institution deposits its money. I assert that there is neither reason nor justice in demanding from the banks of this country bonds to secure Government deposits. I assert that the Government should deposit its money and receive a rate of interest for its deposit, and it can be done with perfect safety.

In 1899 I presented certain questions to Secretary Gage, with certain assumptions, and the result of the investigations was this, that if from 1879 to 1902, where we subsequently carried this investigation, the Government had deposited its money with the banks at the reserve cities in proportion to their capital, and had asked one per cent. on its deposit, there is not one instance in the whole period of twenty-one

years in which the Government would have lost one per cent., and it would have had \$20,000,000 as the result. I say the one per cent. ought to be two per cent., so that practically from 1879, going no further back, the loss resulting from the present system would amount to \$50,000,000. There is another reason—not only the loss of the \$50,000,000—another reason why this Government should not require this guaranty. When you take \$150,000,000 of bonds to secure Government deposits, and \$375,000,000 to secure the currency, you have taken from the channels of commerce more than \$500,000,000, and transferred it to the investment fund.

Now, my friends, I want to say just one thing more that is not a milestone in commercial questions or finance and currency reform; but in my judgment it lies at the very foundation of every consideration. It is this, that production and consumption is the whole secret of our commercial life. When you have found the most economic way, and have reached the wisest conclusion with regard to production, so that our men are paid as well as they can be, you have solved the problem. We must continue to solve from time to time, as the chances come, the great problems of our civilization. We want higher and higher wages; our civilization demands them, and anything that will increase wages should be done. We have freight rates, the lowest in the world. We should have interest rates as low as the lowest in the world, and they are twice as high as the lowest in the world. You have a duty as a citizen to solve this great question. The welfare of the citizen increases his intelligence, increases his home life, enlarges his manhood and makes him more and more a part of the country in which he lives. We must have the world's markets; that is the battle of civilization to keep our men working all the time. If we keep them working all the time at the wages they are getting, we will produce one-quarter more than we consume, and how can you stay in the markets of the world with five and six per cent. money with others who get it for three. It is for your interest to keep the men working all the time. What will happen to the finances? What will happen to the prosperity of this country, if we lose the market for the one-quarter that is produced over and above the amount consumed? It is the last twenty-five per cent. that pays, and it is the last twenty-five per cent. of business that you do on which you make the profit.

I believe in American citizenship and I believe in my country. Hopefully as I believe in American citizenship, I believe we must go to the end of the earth with our products. I believe if we shall make these changes in our currency, New York and not London will be the financial center of the world. I want to see the time when bills the world around will be in dollars and cents and not in pounds, shillings and pence. I want to see the time that every piece of exchange will be paid by other bills for American goods; when the English language is spoken everywhere and that with an American accent. And as an incident of this I want to see every dollar's worth of goods that we produce go out of this country in American bottoms, and every dollar's worth that we consume from abroad, brought in in American bottoms. I want to see a merchant marine whose great hulls will mount every ocean, and whose buoys will be kissed by the waters of every navigable sea. I want to see our flag floating everywhere. Pressing upon the breezes of every land, conveying the message of peace, of honor and of power, and telling to all the world of civilization higher than any other, a citizenship almost ideal in its character, representing the purity of the white of the flag, the fidelity of its blue, the patriotism of its red, and the eternal hope of its stars. And I want to stand for a nation among the nations of the earth, pure in its purposes, faithful to its trust as the leading and the guiding nation now of all this earth. Patriotic in this, that it stands for all that is best in twentieth-century civilization, and holding out to the world the eternal hope of the stars.

COMPETITION BETWEEN BANKS AND TRUST COMPANIES.

The steady increase in the number of trust companies and their encroachment on the legitimate business of banks of deposit and discount have aroused the officers and directors of banks to the fact that some steps must be taken to meet this new form of competition.

Since by their charters trust companies are permitted to do not only a strictly trust business, which banks of discount are prohibited from doing, but are permitted as well to take deposits of money, to be paid on demand or time, with or without interest, and are allowed to discount notes and other evidences of debt (under the guise of purchasing them), thus invading not only the field of banks of discount, but Savings banks as well, the question of life or death faces many bank directors. How to meet this strong competition presses hard upon the attention of all bankers, especially the country banker.

Whenever a bank has met with a good degree of success, sooner or later a set of men get together and subscribe for enough stock to secure a charter for a trust company. They get it in most cases for the mere asking (although the Superintendent of Banking of New York has shown good judgment in refusing to grant a charter where a trust company was not needed), and the struggle for deposits begins, for upon the securing of deposits in most cases their life and success depend. To secure them they must offer big inducements, so a high rate of interest is offered; in many cases interest being allowed on daily balances of \$100 and upwards at from three to five per cent. The depositor as a rule has little or no knowledge of the bank's investments; his only thought is to get interest on his balance. If he were to study the question, he would learn that Savings banks must invest their funds in certain well-defined securities that have been well tested, such as real estate mortgages based on a fifty per cent. valuation of the property, or in municipal bonds or railroad mortgages that have not defaulted in their interest for a long period of time, or if a National bank, that its funds must also be invested in certain kinds of securities that have proved to be good. In both cases these securities are passed upon by State or National authority. While the same scrutiny is made of the securities of trust companies, it should be remembered that the right to loan only upon certain well-defined securities does not apply to trust companies, their charters giving them unlimited powers for the investment of their funds. This is the danger point. The temptation to make money quickly and to pay large dividends renders it easy for loaners of money to take larger risks than good management and prudence would allow, and it is believed by many conservative bankers, should we experience another financial panic, that some of the trust companies would be unable to weather the storm. It should also be remembered that trust companies are not required to keep much cash in their vaults, but can keep their funds largely in loans and securities or on deposit in banks. If a panic such as occurred in 1893 should again visit us, the struggle for currency would result in the survival of the fittest, and the bank having the largest cash reserve would certainly be in the best position to stand the strain of large withdrawals of deposits.

But the depositor as a rule does not consider these facts. The trust company wants his deposit and offers the interest inducement and secures it unless the bank

of discount or Savings bank offers him equal inducement to deposit with them. The Savings banks have met this demand and have allowed as high a rate of interest on time deposits as it is possible for them to give; so the securing of deposits is not so vexing a question with them as it is to the banks of discount.

Can a bank of discount meet this new form of competition? Can it afford to pay interest on deposits? If so, what is the best plan to pursue? The writer believes it not only possible but necessary to meet the competition forced upon the banks by the trust companies. A new feature in banking has developed very rapidly in the past five years. The idea of considering money as a commodity to be bid for in the open market is one that many bankers cannot grasp. They still cling to the idea that deposits should not be solicited but that depositors unsolicited should select the bank in which to deposit their funds. "The world do move," and financial methods have also greatly changed in the past few years. Up-to-date bankers consider a possible depositor in the same light as a merchant does a possible customer, and each doing the best he can to build up his business uses every legitimate inducement to get the customer. One of the inducements a bank offers is to pay interest on balances. It is a well-established fact that the ratio of expenses decreases as the deposits increase. A bank can afford to pay some interest on deposits and still make a fair profit, provided the deposit has reached a certain amount, and will not go below that figure or will remain untouched for a specified period of time. But the old time banker says, if we start in to pay interest on deposits, how are we going to make as much money as we are now making? I reply, the increase of deposits will give you so much more money to invest that you will more than make up for your seeming loss. He usually replies, I doubt it; show me the proof.

The writer has taken the occasion to bring this question to a large number of bankers of New Jersey and New York, and has induced some to demonstrate the fact that it pays to pay interest on deposits. In some cases the banks have more than doubled their deposits in two years, and others have added from forty to eighty per cent. inside of a year. In all of these cases the increase has not been at the expense of the deposits already in the bank (not bearing interest), but has been new deposits which would have gone to a trust company or Savings bank. If these banks have made such magnificent increases in their deposits in so short a period, have they not a right to expect a still larger increase as time advances.

Another feature which is worth considering is that banks which pay interest get the people coming their way, and every depositor, if treated courteously, has a friend who may have some money to deposit in a bank and he naturally recommends the bank where he keeps his money, and so, on the endless chain plan, the depositors of a bank keep on multiplying through and by the help of its own customers, many of whom open in addition accounts for checking purposes which bear no interest.

Now, if this be true (and it has been so demonstrated), the live up-to-date banker wants to know what is the best plan to be pursued. How shall we go at it to get the best results? Shall we pay interest on all daily balances subject to check, or on none? Shall we issue certificates of deposit bearing interest or open a savings fund department? The question of environment has something to do with answering these questions. If there is a trust company in the same town or vicinity paying interest on daily balances, it might be necessary to do the same, but it would be folly to pay interest on balances of active accounts whose average balance is not more than \$300. There is a fair margin of profit after paying two per cent. on balances of not less than \$500, if the account is active. But unless it is the only way to hold an active account, the writer believes it bad policy to pay interest on any active account.

The other ways are either to issue certificates of deposit bearing interest for sums left on deposit for a fixed period of time, or to open a savings department, re-

ceiving deposits to be entered in a book similar to that issued by a Savings bank and subject to the same rules as to withdrawals.

The former of these two ways has been in vogue in many banks for some time, but it is not the best way to meet the demand, as the certificates are frequently lost or destroyed and both bank and depositor are put to a great deal of trouble in consequence; and there is also the danger of certificates being raised and banks put in jeopardy as a result. But if a bank issues a book to a depositor and requires him to present his book to withdraw his balance, the element of risk is eliminated, hence the writer believes this to be the best way to solve the question of how to meet the competition which the trust companies have thrust upon the banks.

The question has been asked, can a National bank open a savings department? In reply the writer would state that there is nothing in the National Bank Act preventing it and the Comptrollers have ruled it permissible. Another vexing question to be answered is whether, if such a department is opened, would not the bank be subject to State supervision. The answer is, National banks are Federal institutions and are not subject to State laws except in the matter of taxation and the maximum rate of interest to be charged on loans.

Again, must these deposits be kept in a separate ledger and invested differently from the other deposits of the bank? Yes, they should be kept in a separate ledger—the loose-leaf being the best form, but they must be invested in the same way as the rest of the deposits, all of which is clearly set forth in the National Bank Act. Prudence would suggest, however, that these deposits be largely invested in call loans or in good marketable bonds so that they can be quickly converted into cash if necessary.

Since it is clearly within the province of a National bank to maintain a savings department, there is another view of the question which is worthy of consideration. A charter for a National bank is granted when it is shown there is need for one in the town and locality where it is to be established. Its functions are to receive deposits, discount notes and other evidences of debt, buy and sell exchange and transact such other business as may be legally done. In some communities National banks have failed to meet a great need. They do not recognize that a large class of people who are frugal, who save a part of their earnings, lay it aside against the time when sickness or old age or adversity shall overtake them. This class of people cannot afford to put their savings where they will not earn any interest, and they should not be forced to travel miles from home to find a bank that offers interest on that class of deposits. If there is no Savings bank in the town a National bank ought to receive such deposits and pay the same rate of interest that a Savings bank does. Notwithstanding the fact that occasionally a National bank fails, the public at large puts a great deal of confidence in the National banks, and the people very quickly avail themselves of the opportunity to open an account in a National bank if it will give as good rates of interest as a Savings bank. Many bankers are beginning to view the matter in this light, and some have established savings departments, resulting in larger deposits, larger profits and filling larger places in the communities in which they are located.

If the foregoing shall cause others to take up the matter, the writer will feel that he has not written in vain.

W. H. BRYAN.

THE BANKERS' MAGAZINE will be pleased to receive and publish other views in regard to trust companies and banks, dealing with the matter either from the banker's standpoint or from that of the trust company officer.

NATIONAL CONVENTION OF STATE BANK SUPERVISORS.

A convention of the supervising officers of State banks was held at Buffalo, N. Y., July 7 and 8. Papers were read on the different phases of bank examinations, and the following officers were elected: President, F. E. Timberlake, Augusta, Me.; vice-president, F. D. Kilburn, Albany, N. Y.; secretary and treasurer, Marcus C. Bergh, Madison, Wis.

Next year's convention will be held at Indianapolis.

The following paper was read at the Buffalo convention by Marcus C. Bergh, State Bank Examiner for Wisconsin:

PRIVATE BANKING AND ITS SUPERVISION—ADDRESS OF MARCUS C. BERGH, BANK EXAMINER OF THE STATE OF WISCONSIN.

Mr. President and Gentlemen of the Convention: Some time ago I received a communication from our president, Mr. Johnson, stating that my name would appear on the programme for an address at this meeting, and the subject assigned to me was "Private Banking and Its Supervision." Our president must have known something about the difficulties under which we have been laboring in Wisconsin in our attempt to examine and supervise private banks.

In order, gentlemen, to give you a correct idea of our position, it will be necessary to briefly give a synopsis of the laws under which we have been working.

The constitution of the State of Wisconsin with reference to banks and bank legislation, prior to the amendment adopted at the last general election, required all such legislation to be submitted to a vote of the electors of the State at some general election, and had to be approved by the majority of the votes cast on that subject at such election before it had any force or effect. At the last general election, however, an amendment to the constitution was adopted, giving the Legislature power to enact a general banking law for the creation of banks and for the regulation and supervision of the banking business. This legislation required a two-thirds vote of both houses of the Legislature under our new law.

Section 2, chapter 523, Laws of Wisconsin for the year 1899, defines private banks as follows: "Any person, persons, association or corporation who shall use the words bank, banking or banking-house upon any sign, advertisement or designation of any place of business in this State, or upon any posters, bill heads, drafts, checks, notes or bills of exchange or on any form of commercial paper as a business title, sign, notice or designation, shall be deemed and considered a private bank within the meaning of the laws of this State and shall make report to the State Treasurer at the same time and in like manner as required of State banks."

Prior to 1896 banks were not examined in Wisconsin, but the law required semi annual reports to be made to the State Treasurer, on the first Mondays of January and July, each year.

In the year 1896 the Legislature enacted a law creating the office of Bank Examiner, known as chapter 291 of the laws of that year, which provides for an annual examination of all banks, including private banks, and, excepting, of course, National banks. The same act also required all such banks to make to the Bank Examiner not less than three reports in each year. The examination and supervision thus prescribed involved a great deal of work, the number of private banks ranging from 107 in November, 1896, to 141 in November, 1902, and their aggregate resources being \$7,000,812.41 in November, 1896, and \$13,886,749.09 in November, 1902. Additional difficulty in the work arose from the defective and partly obsolete banking law theretofore existing, which had been enacted in 1852, and never was modernized, nor thoroughly revised, so that whatever improvement there was in method and general condition of banks was attained as the result of moral suasion rather than from duress or compulsion.

For eight years prior to the passage of the General Banking Act of 1903, so-called "private" banks were examined, and under the supervision of the State Bank Examiner.

The effects of the supervision cannot be regarded as being other than beneficial. On the whole much good was accomplished. Not only were methods vastly bettered and accounting

systematized, but the character of investments showed a marked improvement. Bankers, some of whom at first but reluctantly submitted to examinations, soon became aware of an unexpected—I'll be charitable enough not to say undeserved—prestige following in the wake of State supervision, and were no longer averse to paying the paltry fee therefor.

But the improvement was in reality more superficial than actual. The evils inherent in the system of private banking could not be eradicated by State supervision. They baffle the ingenuity of the legislator; they defy the examiner. The examiner may find the bank proper quite solvent, yet the proprietor, engaged in other pursuits, may at the time be in difficulties, hidden from the examiner, and which, eventually, may embarrass or bring disaster to the bank. As an illustration in point, I may be allowed to quote the following from the fifth annual report of my predecessor, the late Edward I. Kidd, to wit:

"The proprietors of the Bank of Dorchester were engaged in other business pursuits in addition to that of banking and incurred liabilities in excess of their ability to pay: attachments ensued and, this being a private institution, the attachments not only covered other lines of business in which the proprietors were engaged, but the assets of the bank as well, and while the assets of the bank, as shown by examinations made, were nearly, if not quite, sufficient to meet its liabilities, they could not legally be held for that purpose, but were by law required to be divided *pro rata* among all persons who were creditors of the firm, whether such person was a creditor of the bank or any other branch of the firm's business."

And, to quote further from the same report:

"The main difficulty in supervising the private bank is that while the assets and liabilities as shown by its books may show the bank proper to be in safe condition, the individual or firm, or the individual members of the firm which operates it, may be indebted to outside parties to such an extent as to cause the person or firm to be insolvent, and any examination which could reasonably be made would fail to disclose such insolvency."

In other words, if the proprietor or proprietors of a private bank is engaged in, let us say, a general mercantile business, the bank examiner, in addition to examining the bank, would have to make a careful inventory of the general store, and to take into account the firm's liability on the stock of goods in that store, as well as their private and personal liabilities, before he could accurately report upon the solvency of the bank proper.

An attempt was made before the Legislature of 1901 to exempt the assets of the bank from attachment by outside creditors, so as to reserve the assets of the bank only for the depositors and other creditors of the bank proper. This attempt, however, was unsuccessful, because as it was rightly pointed out, an arrangement of this kind might easily result in evading the payment of just debts, on the part of the banker, by transferring all of his assets to the bank for the benefit of the creditors of the bank only.

Many other evils and difficulties were encountered in the supervision of private banks. They are briefly summarized in my last annual report in the following language:

"Where a private banker has no other business and devotes his entire time to banking, he will probably conduct his bank in a safe and business-like manner; but the fact that the death of the owner or any one of the owners of a private bank will force its closing, thereby subjecting his or their customers to unnecessary risk and annoyance, is in itself sufficient reason why the present system, or rather lack of system, should be discontinued. Where a private banker is engaged in other enterprises, as he usually is, it is difficult to keep his private affairs separate from his bank, and to mingle his private business with his banking business is liable to subject the bank and its funds to risks that may result in disaster."

A thorough discussion of the subject before the banking committee of both houses of the Legislature convinced the committee that the true solution of the problem lay in doing away with private banking entirely. The views of the committee are embodied in section 45 of the new General Banking Law, now on the statute books, of which Wisconsin may be proud.

Said section, adopted in substance from the New York Banking Act, reads as follows:

"No person, co-partnership or corporation engaged in the banking business in this State, not subject to supervision and examination by the Commissioner of Banking, and not required to make reports to him by the provisions of this act, shall make use of any office sign at the place where such business is transacted, having thereon any artificial or corporate name or other words indicating that such place or office is the place or office of a bank, nor shall such person or persons make use of or circulate any letter-heads, bill heads, blank notes, blank receipts, certificates, circulars, or any written or printed or partly written and partly printed paper whatever, having thereon any artificial or corporate name, or other word or words, indicating that such business is the business of a bank. It shall be unlawful for any person, co-partnership or corporation to use the word 'bank,' 'Savings bank,' 'banking,' or 'banker' or the plural of any such words, in any other business than that of the business of banking as defined and authorized under the provisions of this act. Any person or person violating the provisions of this section, either individually or as an interested party in any co-partnership or corporation shall be guilty of a misdemeanor, and on

conviction thereof shall be fined in a sum not less than three hundred dollars nor more than one thousand dollars, or by imprisonment in the county jail not less than sixty days nor more than one year, or by both such fine and imprisonment."

In conclusion, gentlemen, I desire to say that examination and supervision of private banks where the law does not require the property of the bank to be held entirely separate from other property of the owner or owners of such bank is a waste of valuable time, as it cannot mean anything, and, as before stated, gives the private banks a prestige by reason of examination and supervision which they are not entitled to.

I deem it unnecessary to further trespass upon your valuable time by giving further illustrations why private banks cannot be successfully supervised. Do not misunderstand me, gentlemen, I do not mean to convey the idea that we have no good private banks. On the contrary, I wish to say that we have in our State some very excellent financial institutions that have heretofore been conducted as private banks, but that is no valid reason why we should permit private banking indiscriminately, because some of them are properly conducted and strong, by reason of personal financial responsibility of the owners. We always find exceptions to any general rule, and we must therefore look for the greatest good to the greatest number.

There seems to be something about the word "bank" that inspires confidence, and owing to the quite general and growing demand for State supervision over banks, the name therefore should not be used by institutions in States where State supervision is in vogue, except by banks regularly incorporated under laws giving the banking department authority to accomplish that which was intended.

THE BANKERS' MAGAZINE hopes to publish some of the other papers in a subsequent issue.

The Editor and the Banker.—Wealth means money, but it is not money until it is converted into cash, or credit, usually the equivalent of cash. Business men are seeking a safe process by which wealth can be conveniently exchanged into cash. The more complicated the method of exchange the more difficult it becomes to obtain money for the uses of commerce and the greater the hardships of those who have wealth and need money or credit, the greater the suffering of all. Newspaper publishers can endure a panic, perhaps, as well as any other industrial class, but no one wants a panic less than we, and no members of society have it in their power to aid more potentially in preventing or in bringing on a panic than editors, great and small. This is the reason why I depart from the customary usage and deal with a subject not ordinarily touched upon at our conventions.

If the editor seeks a special article for his columns, he obtains it from a specialist. If he is gathering facts on agriculture, he talks with a farmer. If he is reviewing a medical case, he consults a physician or a surgeon. If he is discussing theology, he appeals to a clergyman, or law, to a lawyer. Why, therefore, in discussing business matters and banking, should he not consult the banker? How many editors in our smaller communities are guided in their utterances on financial questions by the opinion of the local banker, the best financial authority in the place? Your local banker is usually one of your ablest business men, whose success has emphasized his integrity and honesty, and he is a safe adviser. Financial questions are too often made political issues, and the editor, ignoring the banker, takes his cue from the politician, who, probably, knows less about finance than any other man in the community.—From an address by John A. Sletcher before the National Editorial Association.

Paper Money in Colombia.—The Colombian Government recently submitted to Congress a statement of the paper money circulation of Colombia on February 23, the date upon which the decree was issued stopping further emissions. On that date the paper circulation amounted to \$300,394,581 issued by the national Government. This does not include \$750,000 issued by the Department of Santander; \$18,702,100 by the Department of Bolivar, and \$35,938,483 by the Department of Antioquia.

New Counterfeit United States Note.—A new issue of the counterfeit of the United States (Buffalo) ten-dollar note has been discovered. It is the same as the counterfeit note of this issue previously reported, except the check letter has been changed from C to B and the plate number from 57 to 52.

LIBRARY CATALOGUE OF THE ST. LOUIS CHAPTER AMERICAN INSTITUTE OF BANK CLERKS.

This list contains one hundred and seventy-one works, consisting of from one to twelve volumes each, and represents books which to-day are actually in possession of the Chapter. A number more, principally foreign editions, have as yet not been received.

These books may be taken home by members under rules governing such arrangements, posted in the library.

Classification is made according to subject-matter.

STATE BANKERS' ASSOCIATIONS.

MINNESOTA BANKERS' ASSOCIATION.

The fourteenth annual convention of the Minnesota Bankers' Association was held at St. Paul, July 7 and 8, J. W. Wheeler, Cashier of the First National Bank, Crookston, presiding. Addresses of welcome were made by City Comptroller Louis Betz and by Judge J. W. Lusk, President of the National German-American Bank and President of the St. Paul Clearing-House Association. Judge Lusk thought that at the present time banks should be particularly cautious in making loans. He said the banks could see the earmarks and signs of financial trouble.

President Wright, in his annual address, stated that the iron, lumber and agricultural conditions in the State were all favorable. He urged a reasonable degree of care on the part of the banks, pointing out that good weather was a favorable time for house-cleaning. Referring to currency reform plans, he said that the majority of them might be justly labeled, "A bill to assist in further expansion." President Wright also declared that, in his opinion, the management of the currency question rested largely with the strong banks of the country, and that they possessed the power to check undue speculation.

Joseph Chapman, Jr., Cashier of the Northwestern National Bank, Minneapolis, read his annual report as secretary, which was in part as follows :

"The secretary has done the best he could to advertise and push the sale of bank money orders, and the success which has met our efforts has been more than satisfactory. The association has furnished some 2,000,000 applications for bank money orders to the jobbers and manufacturers in the cities and has answered letters from all over the United States concerning the methods used by this association in advertising our bank money orders. I am in receipt of a letter from Tennessee to the effect that our plan was discussed at the Virginia and Tennessee association meetings, and would in all probability be adopted.

It has been our endeavor to start this campaign in as business-like and practical a manner as possible. It should be the business of the Minnesota Bankers' Association to push this work, as I am satisfied we have never undertaken anything which has promise of more returns to the banking interests of Minnesota than does this advertising of bank money orders. We should have a uniform Minnesota money order, and it would be my recommendation that a committee of three or five be appointed by this convention, to whom designs may be submitted by different firms making drafts, and have this committee select a design to be used as the Minnesota bank money order.

I will also call the attention of the convention to the fact that many of the banks in the State are in favor of making a uniform charge for cashing express and postoffice money orders. Regarding our protective work, our association has done excellent work along this line. * * *

During the past year we have increased our membership over 100, and have now a total membership of 532. At the Winona convention (June 19, 1900), I reported that there were 538 banks and banking institutions in the State, and that our membership at that time was 262. At that time our membership represented a banking capital of \$23,928,000, while there was employed in all the banks in Minnesota, \$32,655,000. Deposits represented by our members amounted to \$97,440,000, while those of all the banks in the State amounted to \$110,843,000. At the present time there are 705 banks in the State of Minnesota. Our association is in an active, flourishing condition."

A discussion of bank money orders was participated in by J. M. Haven, President Sherburne County Bank, Big Lake ; O. H. Havill, President Merchants' National Bank, St. Cloud ; A. W. Laird, Cashier Second National Bank, Winona, and A. M. Schancke, Cashier First National Bank, Elmore.

Hon. Charles N. Fowler, Chairman of the Banking and Currency Committee of the House of Representatives, spoke on "Necessary Financial and Currency Legislation," his address following the lines of several others recently delivered by him and fully reported in the MAGAZINE. Referring to the issue of a credit currency, Mr. Fowler said:

"Now, I want to speak to you in regard to this currency. It is nothing more than a personal check: so far as the public is concerned and so far as the bank is concerned, it does the same work. Let us take an illustration. Say Mr. Stickney here goes to a bank down here and says: 'I want to borrow a thousand dollars.' The banker says: 'Mr. Stickney, how do you want it?' Mr. Stickney says: 'I want you to place it to my credit, and I will put a check against it.' The next day he goes in again and wants to borrow another thousand dollars. The banker says: 'How do you want it?' 'I want it in a draft on New York.' He goes in the next day and wants to borrow a thousand dollars. The banker asks him: 'How do you want it,' and Mr. Stickney says: 'I want it in a certified check.' He goes in the next day and wants to borrow a thousand dollars. The banker asks him how he wants it, and he says he wants a Cashier's check. Now, I challenge any man, any of you bankers here to get up and tell me what the difference is between these four things to the bank. In every case that liability was a thousand dollars. There isn't the slightest difference in the world.

Now, some say, why, this would lead to speculation. About ninety per cent. of the business done in this country, in round numbers, is carried on by checks and drafts; two per cent. is carried on in coin; that leaves eight per cent. to be covered by these bank notes. Now, don't you think that while ninety per cent. is carried on by checks and drafts and two per cent. in coin, there would be something mysterious about the eight per cent. that was left, something mysterious that would lead to speculation? It is the check and draft that make speculation and which lead to an unsound condition. It would not be the bank notes. It is the banker behind the counter lending money when he ought to say no, who aids speculation. It makes no difference how you use the money after the banker gives it to you. If the bankers in New York, who could conservatively loan \$100,000,000, loan \$200,000,000, there is where the trouble lies. Supposing that one of you gentlemen, who are bankers in Minnesota, was a banker in Wall Street, and got some day \$100,000 worth of notes. What would you do with them? What do you think you would do with them? Why, you wouldn't loan them, because no man who ever did any speculation would ever use that amount in money. He would use it in check form, check against his account, that is all, use it as a check. Hence, if you were doing business in New York and got \$100,000 in bank notes, you would get \$100,000 of what? Gold certificates, silver certificates, and put those in your bank. Then you could loan not \$100,000 but \$400,000; and that is what you are in business for. Wall Street wants reserves in order to loan largely, and not being able to hold those notes as reserves, then they would at once send them home for redemption. The life of these notes in Scotland, I think, is eighteen days; thirty days up in Canada, and in New England, before there were any railroads, telegraph or telephones, it was forty-five days. You have got a currency that is like a check, moving like a check, and when a banker gets that kind of a note he is going to send it home. Why? Because he can loan four times the face value of that note, and that is what he is in business for."

The next address was by A. L. Ward, present of the Martin County National Bank of Fairmont, on "Bank Credit to Customers."

ADDRESS OF A. L. WARD.

Mr. President, Ladies and Gentlemen—It is well it times of peace to prepare for war; and while I do not believe that an impending financial disaster is overshadowing this land, or that we are about to enter into the realms of financial darkness, it is well that we take lessons of the past. There is no vocation that equals in importance that of banking. On account of the great variety of customers doing business with them and representing different vocations which are frequently in conflict with each other, the banker should be alert, the banks well organized, not only in their national but in their State and district organizations as well, posting and aiding one another and working together for the common good. My experience is confined to country banking, where in nearly every instance the patrons are personal friends and acquaintances, of whose character, integrity and financial standing we are well informed. The country banks are not called upon to extend credit to gigantic corporations, or large commercial and manufacturing industries. The loans in the country are seldom large. It has been said, judge the future by the past. Apply that rule to business, and we find that there are years of prosperity and of expansion followed by others of contraction, depression, liquidation and loss. They are as sure to come as winter follows summer, and

when they do the large institutions totter and fall. The large commercial houses and manufacturers go down the same as the small country bank and country store. The cause of it is the taking of undue risk, forgetting the lessons of the past, taking too many chances.

There is great danger in real estate speculation, both in the cities and in the North Dakota and Canadian wild lands. A time of storm, wreck, depression and loss will follow reckless expansion and speculation, and only those institutions that are safe and conservative will weather the storm. The others will go down and pull others down with them. The city banks have the advantage as to credits. They have a large number of working officials and directors, competent clerks, who hold their educational meetings and are well informed in their work. With the city banks, a bill is payable on a certain date, and it is expected to be paid or promptly renewed. They have endorsers to look to in case of protest. They do not carry overdue paper, and it takes a deposit of funds to the credit of an individual before his check is honored. There is a condition it is well for the country banks to pattern after. On the contrary, what do we see in the country banks? We see too much latitude given. It is very questionable sometimes about their paying. They do not expect to pay at maturity. I venture the assertion, that to-day not one-half of the notes in the country banks are paid at maturity; the makers relying upon their acquaintance with the officials, their supposed good financial standing, and laxity of business and competition. It has become a question of doubt or convenience to the borrower as to when he will make payment.

We find that this present year of prosperity has increased the number of country banks until I do not believe all can exist: that it will soon be a 'survival of the fittest.' While in the large cities the large institutions have merged and consolidated, in the country at every little railroad station, without regard to business situation, banks have been established, until the number is very greatly increased. The result is, that competition is becoming so fierce in the country as to cause the letting down of the bars of safety; rates are lowered, exchange furnished without charge, and discounts are reduced to an extent that there certainly can be no profit.

Then, again, we have a system in the country, which I do not believe exists in the cities, of allowing overdrafts. In a country town having less than 4,000 population, with two National banks having deposits of less than \$500,000, the last call of the Comptroller showed overdrafts, in those two National banks, exceeding \$26,000. The National City Bank of New York, whose deposits are equal to, if they do not exceed, the combined deposits of all the private, State and National banks in this State, showed overdrafts of less than \$3,000.

This is added to and made worse by the growing practice of scattering broadcast private checks. A resident is owing such and such a party outside. He issues his check, and sends it north and south, east and west. These private checks come from Chicago, New York, St. Louis and even from the Pacific Coast. At the time they are issued he has no funds to his credit. These checks are sent with the hope and expectation that by the time, in the usual course of business, they reach home, he may be able to have a deposit. Business demands or failing to keep an accurate account of the number and amount issued, most generally result in that when presented for payment an already existing overdraft account is found. They are plastered all over with endorsements, and it means large protest fees and endangers the credit of the customer. They are a system of forcing credits and increase the overdrafts. The overshadowing evil and menace to country banks to-day is the system of overdrafts and scattering broadcast of private checks without first a deposit of funds. It is true, that there is upon the statute books of this State a law making it a criminal misdemeanor to issue a check without first having deposited the funds, but who is there of you, gentlemen, who would want to be the first to cause criminal prosecution against your patrons, friends and neighbors? Again, the banks could avoid large failures and losses, in many instances, if they were willing to work together. Confer with one another as to credit and business. Then, again, the system of accepting one-name paper is not safe, not asking other security. That may be all right in certain instances, but when acted upon as a general rule, it is an unsafe proposition.

On behalf of banks this growing tendency and desire to spread out, expand and enlarge, is the trouble and the menace that confront the business world of to-day. People are not satisfied to let well enough alone. It is true, that the world moves on, and a step forward must be constantly taken, but it should keep pace with that of safety, and when, in the desire to branch out and do a larger business, we overreach the bounds of common prudence, it is time that a halt was called. I want to say to the bankers who have a number of banks, say ten or twelve banks, that it is well enough to have them. I like to see a laudable ambition, political or in a business matter, but when you reach a certain stage where you have more to control and look after than you can very well carry, it is better to merge and contract before a financial panic makes you do so. It was that ambition to spread out which led the great Napoleon to seek other nations to conquer, and it was that ambition to spread out and branch out that caused his Waterloo. There is only one J. Pierpont Morgan and only one James J. Hill. The ability to own, control and manage the Standard Oil Company or the

Steel Trust Company, is possessed by only a limited few. As a class, bankers are very jealous and suspicious of each other. If there are three or four country bankers together, and one broaches a proposition as to management or something in connection with the business which would be mutually beneficial, the others are apt to cast a look of suspicion upon it, as a matter for careful consideration. If this association would get together, and could succeed in getting all the country banks into the association, and then try and form local organizations, it would be of great help and assistance to the country banks, such district organizations as the two now formed. I thank you for your attention.

At the second day's session Hon. Charles G. Dawes, former Comptroller of the Currency, and President of the Central Trust Company of Illinois, Chicago, spoke in opposition to a permanent issue of asset currency, but favored a properly-regulated emergency circulation. In opposing the branch banking system Mr. Dawes said :

" We have here the greatest banking system in the world. I have heard it held up to great criticism. I have heard Americans visiting in Europe say they were ashamed of our banking system or the banking system of the United States in comparison with that of Europe. We have not built up the banking system of the United States upon Continental ideas. Two lines of thought have run along side by side in financial matters in the United States: the old Banks of the United States, the first Bank and the second Bank of the United States, were the American expression of the idea of Continental banking. We did not follow along in those lines, but built up a banking system upon another theory—the banking system in the United States was built up by protecting the rights and the opportunities of the small man and the small bank in business; built up from units, individuals, from the bottom up! The European system of centralized banks with branches was built from the top down.

It has been of the greatest importance to this nation, industrially, that we have pursued the American idea in banking. It is the same idea that underlies the theory of protective tariff. Let the little man grow. Let him have a chance. This system of ours, in 1890, was a little more than the banking power of the United Kingdom and little less than the banking power of Continental Europe; Within ten years this banking power of ours has grown so that it is now within twelve per cent., not only of the banking power of the United Kingdom, but of the banking power of the United Kingdom and of Continental Europe put together. And we have built this system up by protecting the small banker.

Now, however we may differ as to this question of branch banking, let me say right here, that as practical men we all know that at this particular time there is no chance of a branch banking law going upon our statute books. Right or wrong, debatable question as it may be, there is at this time in the United States a widespread apprehension lest this great process of centralization and consolidation of industry and of capital are not too greatly curtailing the opportunities and chances of the individual; we know that that apprehension exists. And we all know how futile it is to expect to have passed into law any change which removes existing restrictive provisions of law against the branch banking system, and opens still further the way for the same process of consolidation and centralization to go on in the banking business as is now going on in general commerce and industrial business.

I do not want to be considered an obstructionist. I think it is time to take a step in advance, but take a step that is safe. We do not want to consider the question of branch banking as a matter even for discussion among the bankers of the United States as a thing at present practicable or possible. I do not think, as a matter of principle, we can afford in this country to depart from our present theory of banking. Under it has been developed the greatest banking system of the world. The time is not ripe for branch banking in this country, if such a time ever will come. Branch banking would certainly not aid in building up our undeveloped country and the newer sections of the United States.

He who would stand for the common good of all should argue the question from the standpoint of the people building up a great and undeveloped country, for the United States as a whole is still undeveloped. If you discourage the small bank you do not injure so much the depositors of a small community but you curtail the opportunity for credit of the small borrower, and it is the small borrower of the United States who has built up the country. It is the man who goes in to start a little business, a little wholesale business, a small manufacturing business, a small mining business or some other business of small beginnings, who has developed and built up the country. He does not often have collateral. The money he borrows often forms a certain and even large proportion of the total investment made by him; money advanced him because he has character and standing with the local bank. The local banker knows him, has followed him, trusted him, and gives him credit upon his representations that he will pay—not upon his collateral. The man who will bring out from this soil its riches, the man who will be a great manufacturer, the great farmers of the future, some of them are hard up now, some are having trouble right now to pay back the little

money advanced them with which to start their struggling industries by the small banker, who trusted them. Some of them will go under, but more of them will keep on, until this great State of yours, like this great nation of ours, shall dominate over its competitors through the rule of the 'survival of the fittest,' and the protection of home rights of the individual by law."

Resolutions were adopted as follows:

Be it resolved, by this, the Minnesota Bankers' Association, in convention assembled in St. Paul:

First. That we reaffirm the resolution adopted at Crookston in 1902, condemning branch banking, and hereby affirm our continued opposition to same.

Second. That we favor a uniform system of bank money orders, and request our officers to use their best efforts to bring same into general use.

Third. Resolved that we extend congratulations to the banks of the State of Minnesota on the good financial record they have made, there not having been a single failure in private State or National banks in 1902 nor to this date in 1903, and we ask the co-operation of the bank officials of the State that this record may be maintained through the ensuing year.

Fourth. Resolved, that the practice of allowing overdrafts is not conducive to good, safe, conservative banking, and we hereby express our disapproval of that mode of allowing a customer to borrow money.

Fifth. Whereas, it is a well-known fact that many corporations are issuing stocks and bonds far in excess of the value and cost of the property which they represent; and

Whereas, Such corporations, in order to pay dividends on such over-issue of stocks and bonds, charge excessive and exorbitant prices for transportation and for manufactured articles, which have to be borne by the consumer:

Therefore, be it Resolved by the bankers of Minnesota, in convention assembled, that they are opposed to and do hereby condemn the issuing of stocks and bonds by any corporation in excess of the value of the property which they represent; and we do hereby request our Senators and Congressmen to use their utmost endeavors to secure the passage of a law placing all corporations, except banks, which are under National and State control, under the control and subject to the supervision of the Bureau of Corporations in the Department of Commerce, requiring said bureau to certify to the payment of the capital of such corporations, and to the issue of all stocks and bonds, but not in excess of the value of the property which they represent.

New officers chosen are: President, A. C. Anderson, President St. Paul National Bank; vice-president, O. H. Havill, President Merchants' National Bank, St. Cloud. Joseph Chapman, Jr., Cashier of the Northwestern National Bank, Minneapolis, was re-elected secretary, and George H. Prince, Cashier of the Merchants' National Bank, St. Paul, was re-elected treasurer.

IOWA BANKERS' ASSOCIATION.

The seventeenth annual convention of the Iowa Bankers' Association was held at Davenport July 28 and 29. After an address of welcome by Mayor Becker, President Homer A. Miller delivered his annual address. He stated that there were about 1,300 banks and trust companies in Iowa, of which perhaps 200 were banks affiliated with other institutions. The membership of the association is 700, leaving about 400 banks in the State not members. President Miller said that these banks were making a great mistake in not availing themselves of the advantages of membership, which are many, and the expense nominal. He briefly reviewed the work done in protecting banks from the operation of burglars and swindlers, and after commenting on the various devices resorted to to keep from paying exchange on checks, declared that a small charge should be made for exchange. In relation to co-operation in times of panic, he said:

"During the panic of 1893 I was a banker, having all of the aches and pains and experiences that most of you passed through, but in addition to this visited over 150 banks in the capacity of bank examiner, and my heart went out in sympathy for the many good, first-class, absolutely solvent banks, that were called upon for money where it was not needed by the depositor. During the years that have followed my study has been how to maintain

public confidence in times of panic. Relating an actual experience which was one of many, will say that I examined a bank in the spring of 1893 that was as solvent a bank as any in the State, but was called upon a very few months later to withstand a run. They wired me to come, and I reached them early in the morning. We got many of their stockholders together, and at 9 A. M., as the people came in, they were asked to make their checks for their account, and these checks were endorsed by their stockholders, and then handed back to them. By actual count, fourteen transactions of this kind took place, and the balance of the crowd went their way, having confidence that there was something back of the bank.

The panic of 1893 was a long time ago, and if ever another does come, it certainly now looks a great way off, but you know the best time to repair a roof is when the sun is shining.

Banks represent the stability of the business world—regular investments and legitimate trading. Times like the past two years, when there was so much baseless speculation, banks served a most important purpose to the State of Iowa in carefully discriminating between legitimate and wild-cat speculation, and gradually restrained the tendency towards the latter, liquidating and keeping speculation within bounds. Although at the time many were inclined to find fault with this conservatism, it is safe to say that many a man was saved from financial ruin by the firm hand which the banks held upon the situation. Our association has in view just such combined action of banks as will sometimes help the public in times like these."

Reports by Secretary J. M. Dinwiddie and Treasurer Frank Y. Locke showed a large increase in membership and usefulness and a sound financial condition of the association.

A resolution was adopted which pledged a reward of \$1,000 for the arrest, trial and conviction of any burglar who shall rob any bank, or member of the association; or \$500 for information that shall lead to such disposal of the criminal. The following resolutions were also passed:

"Resolved, That a committee of five men be appointed whose duty it shall be to confer with and act in conjunction with a like committee appointed by the Chicago Bankers' Club, and like committees appointed by the State banking associations, to follow all proposed Federal legislation changing the present banking laws or affecting the banking interests, and to take such action relative to the same they may see best.

Resolved, That we reaffirm our former action condemning branch banking and hereby continue our opposition toward the same.

2. That we favor a uniform system of bank money orders and suggest that the president appoint a committee of three to formulate the necessary regulations for placing the system in operation among the members of the association and that the secretary procure and distribute such blanks and advertising matter as directed by said committee.

3. That we oppose the practice of many corporations now issuing stocks and bonds in excess of the actual cash value of the property which they represent, and we ask such legislation at the hands of the State and Nation as will absolutely prevent such overissues and which will result in the punishment of all parties engaging in this ruinous practice.

4. That \$2,000 be transferred from the general fund to the protective fund.

These officers were chosen: President, L. F. Potter, President First National Bank, Harlan; vice-president, Frank Y. Locke, Cashier Sibley State Bank, Sibley; treasurer, D. H. McKee, Cashier Citizens' State Bank, Mediapolis. J. M. Dinwiddie, Cashier of the Cedar Rapids Savings Bank, who has been secretary of the association for fourteen years, was re-elected to that position.

BANKERS' ASSOCIATION OF ILLINOIS.

The thirteenth annual convention of the Bankers' Association of Illinois was held at Rock Island, July 28 and 29. After the customary addresses of welcome the annual address was delivered by President Andrew Russell, of Jacksonville, who said in part:

"The condition of this great country is wonderfully prosperous. 'Tis true our bank clearings on the average are no greater than they were a year ago, but I am safe in saying that the condition of the people has improved. This is shown by the increase of deposits in our Savings banks. It was but a few years ago when almost all our farmers and laborers

were borrowers. Now a large percentage of them are money lenders and property accumulators. From about 1890 to 1896 the condition of the farm renters in this State was going down until the great majority of them had practically lost their all in trying to make both ends meet. Now the case is different with these self same people, most of them having accumulated property. It indeed seems marvelous.

A few years ago Wall Street was considered king. In other words, when Wall Street was prosperous the people were prosperous: now Wall Street seems to be having a tough time of it and the people seem to be paying little attention to the matter, as they are busy accumulating wealth themselves. A panic in Wall Street undoubtedly would affect the whole country, but I do not believe it would injure the prosperity of the people materially. Of course it would tie up temporarily many manufacturing and other industries, but my impression is that the prosperity cannot be permanently injured by any set of speculators. One of Wall Street's chief troubles is that it relies too much on borrowed capital in its financial operations, which is evidenced by the fact that when the western banks draw on their eastern resources for their own uses trouble begins.

Some change in our financial system undoubtedly will be necessary before long. But the people look with dread on any change unless they are convinced that such a change is a wise and safe one, and they will have nothing to do with 'wild-cat currency.' They remember too well the experience of our forefathers, and any new system will have to be explained and well understood and firmly believed in before this self-same people will consider it. And if any law or set of laws referring to a circulating medium is passed and the people believe it will impair the stability of our currency, a panic will be on indeed.

At present the average man believes that the talk of an increased volume of currency is chiefly for the benefit of the Wall Street operator and not for the purpose of moving crops. The bankers, I am happy to say, do not believe this, by any means.

The present State banking law is familiar to all of those present. It prevents the issue of bills and enforces strict business principles. The best evidence of its success and the confidence in which it is held by the people is shown in the fact that the resources of the State banks have increased during the last year more than \$124,000,000.

Every banker in Illinois can congratulate himself to-day on the outlook. Never in its history has the State been in so prosperous a condition."

Several addresses were made, most of the bankers regarding the asset currency scheme as of rather doubtful propriety. One speaker said: "We would better squeeze the water out of our industrial stocks and bonds than put rubber into our currency."

A resolution was passed favoring the appointment of a committee to look after currency legislation, the resolution being the same as that passed by the Iowa Bankers' Association.

President Andrew Russell of the Illinois association appointed in pursuance of the foregoing the following committee: E. J. Parker, Quincy; Phil Mitchell, Rock Island; Thomas D. Catlin, Ottawa; J. S. Aisthorpe, Cairo, and August Blum, Chicago.

Homer A. Miller, of Des Moines, President of the Iowa Bankers' Association, appointed the following committee: J. T. Brooks, Kedrick; C. B. Mills, Clinton; S. L. Ely, Davenport; L. F. Potter, Harlan, and G. D. Ellyson, Des Moines.

The Bankers' Club, of Chicago, is said to have initiated the move, and has appointed a conference committee consisting of J. B. Forgan, James H. Eckels, Orson Smith, E. A. Hamill, and John J. Mitchell.

The second day was devoted to a joint session of the Iowa Bankers' Association and the Bankers' Association of Illinois, Hon. Charles N. Fowler and others delivering addresses.

Officers of the Bankers' Association of Illinois were chosen as follows:

President—William George, President Old Second National Bank, Aurora.

First Vice-President—E. D. Durham, of Durham Bros.' Onarga Bank, Onarga.

Secretary—Frank P. Judson, Cashier Bankers National Bank, Chicago.

Treasurer—H. C. Hamilton, President Bank of Girard.

Vice-Presidents—Harry Higbee, Pittsfield; Frank G. Nelson, Chicago; B. R.

Hieronymus, Springfield; W. T. Robertson, Rockford; John H. Miller, McLeansboro.

[NOTE.—The conventions of the bankers' associations of Illinois and Iowa were held so near the publication date of the *MAGAZINE* that an extended report of the proceedings could not be published in this issue.]

INDIANA BANKERS' ASSOCIATION.

The Indiana Bankers' Association will hold the seventh annual convention at South Bend, Wednesday and Thursday, September 9 and 10. It is expected that this convention will be a red-letter one in the history of the association, as splendid entertainment is promised by the bankers of South Bend.

NEBRASKA BANKERS' ASSOCIATION.

The next convention of this association will meet at Lincoln, Tuesday and Wednesday, October 13 and 14.

This date was chosen with special reference to the meeting of the American Bankers' Association, at San Francisco, and bankers are cordially invited to arrange their trip to the coast with reference to meeting Nebraska bankers at this convention.

If transportation is through Omaha, arrangements can be made to stop over and attend the convention, Lincoln being but a ninety-minute run from Omaha.

OHIO BANKERS' ASSOCIATION.

The thirteenth annual convention of the Ohio Bankers' Association will be held at the Great Southern Hotel, Columbus, Wednesday and Thursday, September 23 and 24.

WISCONSIN BANKERS' ASSOCIATION.

The ninth annual convention of the Wisconsin Bankers' Association was held at Milwaukee, August 5 and 6. A report of the meeting will appear in the next issue of the *MAGAZINE*.

Bank Notes and Checks.—The assertion that bank checks can be made a perfect substitute for bank notes seems to ignore the fact that the average man does not have an account against which he can check. Hon. Chas. N. Fowler, Chairman of the Banking and Currency Committee, in his address before the recent convention of the Minnesota Bankers' Association, said: "If all the farmers and farm laborers and small storekeepers were accustomed to the use of checks, there would be no use for any currency expansion in this country."

It has been said that a bank can as readily lend its credit in the form of a credit on its books as in the shape of bank notes. But the borrower may want to use money, or something that passes as money, instead of notes; and besides, while a bank may profitably make small loans it cannot make any profits from small accounts. This may be a defect in banking machinery, which might be remedied to some extent by the branch system. But the introduction of branch banking would destroy the free independent system of banks, which has done so much to develop the country's resources.

Before checks can be made to take the place of bank notes, there will have to be radical changes in the customs of the general public, and more effective means will also have to be devised for the clearing of country checks.

CANADIAN BANKING, COMMERCE AND MANUFACTURES—A QUARTERLY REVIEW.

A review of the banking, commerce and manufactures of the Dominion of Canada shows that there was a healthy expansion in nearly all departments of business during the first half of 1903.

The increase in population, through the influx of settlers to the West, the arrival of artisans attracted to the Dominion by the greater demands in the manufacturing centres, and the growing wealth of individuals, tend to enlarge the volume of commercial activity, and this development is reflected in the establishment of new industrial and mercantile enterprises in all portions of the country.

As to the outlook for trade the future is full of promise. The general condition of the crops is good. The dairying interests are showing a steady expansion, the cattle export trade is large and profitable, manufacturing in various lines has shown a steady increase, and the construction of works on a large scale, railway building and other extensive undertakings, present and prospective, must in the future prove an important factor in the purchasing power of the West.

There was a remarkable falling off in the number of failures in Canada during the first half of 1903 as compared with 1902, a decrease in liabilities of \$650,000, and a decrease in assets of \$180,000.

Immigration is increasing at a rapid rate, the total arrivals for the fiscal year ending June 30 being 124,658, an increase of 57,279 over 1902. Railway earnings, clearing house returns, figures of foreign commerce and bank statements all combine to show a continuance of the present prosperity of the country.

REVENUES AND EXPENDITURES.

The financial year ending June 30 has been one of unprecedented prosperity for Canada. The revenue on consolidated account amounted to the enormous sum of \$63,739,271, giving a surplus of \$32,290,168 over ordinary expenditures, and of \$15,060,075 over all expenditures combined. All the receipts for the financial year are not yet in. When paid they will augment the total revenue by about a million and a half. A number of liabilities incurred during the past twelve months have also to be met. It is not thought, however, that the totals given above will undergo any material change, as the receipts and expenditures still to come will about balance each other. The increase in revenue in 1902-3, as compared with 1901-2, amounts to \$7,435,577. The ordinary expenditure underwent a reduction of \$806,318, and the capital expenditure a reduction of \$4,302,062.

Following is a detailed statement of the receipts and expenditures:

	<i>Revenue.</i>	
	<i>Total to June 30, 1902.</i>	<i>Total to June 30, 1903.</i>
Customs.....	\$31,945,651	\$38,673,836
Excise.....	11,116,790	11,923,424
Post office.....	3,737,025	4,264,808
Public works, including railways.....	6,380,723	7,004,078
Miscellaneous.....	3,123,503	3,668,124
Total.....	\$56,303,684	\$63,739,271

Expenditure.

	<i>Total to June 30, 1902.</i>	<i>Total to June 30, 1903.</i>
Expenditure (consolidated account).....	\$42,255,816	\$41,449,103
Expenditure (capital account):		
Public works, railways and canals.....	8,084,739	3,979,541
Dominion lands.....	312,308	357,746
Militia capital.....	183,424	100,191
Railway subsidies.....	2,093,939	1,367,082
Bounty on iron and steel.....	600,180	1,242,218
South African contingent.....	258,777	126,330
North-Western Territory rebellion.....	1,214	2,967
Total capital expenditure.....	\$11,512,155	\$7,230,093

CANADIAN TRADE INTERESTS.

The foreign trade of Canada has expanded greatly during the past year and is additional evidence of the great commercial activity apparent in all parts of the Dominion, and a proof of expanding enterprise in manufacturing and commercial circles.

The aggregate foreign trade for the year, which embraces the total imports and total exports of domestic and foreign produce, amounted to no less than \$467,637,049, which is an increase of \$43,750,000 over the trade of the fiscal year 1902. On the basis of imports which actually entered into consumption, and Canadian produce only, exported, the trade for the year amounted to \$448,188,999, as compared with \$398,811,858 for the previous year, or an increase of \$49,377,641. On this basis Canadian trade has more than doubled in the last seven years, as appears from the following figures: Trade of 1903, \$448,188,999; trade of 1896, \$220,502,817.

The exports of domestic produce for the year totaled \$214,401,674. This is an increase of \$18,381,911 over the previous year, and nearly double the domestic exports for the year 1896, when they amounted to \$109,915,337. The exports of animals and their products and the products of the farm figured up to \$114,441,863, as compared with \$96,313,897 for the previous year. In 1896 they amounted to only \$50,591,002. In the last seven years, therefore, such exports have increased by about 130 per cent. The exports of produce of Canadian forests show an increase of \$4,000,000 for the year, the total amount being \$36,386,015. This is an increase over 1896 of \$9,000,000. The exports of manufactured articles produced in Canada continue to increase in generous proportions. Last year they totaled \$20,624,967, as against \$18,462,970 for the previous year.

The free list, which largely comprises raw materials for manufacturers, shows a remarkable expansion in imports, thereby indicating great activity in manufacturing circles. In 1903 the free goods imported, less coin and bullion, amounted to \$88,023,738, an increase of \$10,000,000 over the previous year, and of \$50,000,000 over 1896.

SATISFACTORY CONDITION OF MANUFACTURING.

The manufacturing industries of Canada continue to show a most satisfactory condition. The increasing consumptive demand, owing to the greater prosperity of the country, and the continued flow of settlers to the West, still continues to expand the demand of that portion of the Dominion for all classes of staple manufactures. The exports still continue to increase in generous proportions. The large increase in the imports of raw materials, for manufacture by Canadian people into finished goods, is a most gratifying feature, showing as it does the enterprise of Canadian manufacturers, proving the advantages of manufacturing within the Dominion, and indicating the increasing distribution of funds among the industrial classes.

Factories and mills are now being taxed to the utmost capacity to meet the demands of the country, and labor is well employed and well paid. Industrial and mercantile enterprises are being established in all parts of the country, and the enlargements of plants is going on at a pace which is unexampled, the new species of manufactures established exceeding all previous records.

RAIL AND WATER TRANSPORTATION

The transportation business of Canada is in a very prosperous condition at the present time, the earnings of railways and other transportation companies being very large. In expectation of the tremendous crop yield this year in Manitoba and the Territories, the railways are increasing their hauling capacity very greatly, in order to carry the product to market, and, even with large additions to rolling stocks being made, the railways expect to be taxed to their utmost to handle it.

The earnings of the Canadian Pacific Railway for the year ending June 30 were \$43,880,800, an increase of \$6,877,747 over 1902.

The half-yearly report of the Grand Trunk Railway shows that the earnings of the main line for the six months ending June 30 were, for 1903, \$13,894,500 gross and \$3,987,500 net, compared with \$11,896,000 gross and \$3,868,500 net for the same period in 1902.

The total freight carried on the two "Soo" Canals in June last was 5,105,078 tons, of which eastbound was 3,967,071 tons and 1,138,007 tons westward.

The Canadian "Soo" was used by 686 vessels, or 24.72 per cent. of the whole; the registered tonnage of the Canadian carried vessels was 734,269, or 18.32 per cent. of the whole registered tonnage passing through the Soo canals.

The total freight carried through the Canadian canal was 917,105 tons, of which 721,142 tons was eastbound and 195,963 tons westbound. The proportion of the freight of the two canals carried by the Canadian was 18.17 per cent., eastbound and westbound 17.19 per cent.

The freight carried by the Canadian "Soo" in June, 1903, was 201,459 tons less than in June, 1902.

The Canadian eastbound freight carried in June, 1903, was 178,991 tons less than in June, 1902, and the westbound freight was 22,468 tons less than in June, 1902.

The Canadian canal for the three months of 1903 shows a total of 1,668 passages, which is 220 less than in 1901.

The tonnage of shipping passed through the Canadian "Soo" for the three months of 1903 was 1,544,565 tons, which is 100,975 less than in the three months of 1902.

The freight carried by the Canadian canal in the three months of 1903 was 1,713,615 tons, which is 62,863 tons more than in 1902.

During the months of May and June the number of tons of freight handled by the Soulanges Canal was 88,927 compared with 90,090 tons in the same period last year. On the Cornwall Canal during these months, the freight handled was 90,072 tons compared with 23,599 tons last season.

AGRICULTURAL DEVELOPMENT.

The agricultural interests of Canada are in a most prosperous condition. The development of the harvest in fruit, grain and root crops fulfills the most roseate of early predictions, and as the basis of the prosperity of the Dominion is the yield from the soil, every line of business will derive material advantages from the fulfillment of these favorable prospects.

This year's crop in Manitoba and the Territories bids fair to surpass in quantity that of last year, and the condition of the growing crop over the whole country is

excellent. Carefully prepared crop bulletins give the estimate for Manitoba for this coming harvest as follows :

Acres under wheat.....	2,442,873
Acres under oats.....	855,431
Acres under barley.....	326,587
Acres under flax, etc.....	63,156
Making a total acreage under crops.....	3,687,997

This is an increase in the cultivated area over last year of 547,852 acres. The yield last year amounted to 100,052,000 bushels, or an average of thirty-two bushels per acre. The appearances are that this year's average will equal that of last, so that the total yield is estimated at 116,016,000 bushels, an anticipated increase this harvest of 15,964,000 bushels for Manitoba alone.

Last year the Northwest Territories had about 885,250 acres under cultivation. This year they will probably have over one million acres cultivated, with 32,000,000 bushels as the total yield.

This gives a total acreage under cultivation for Manitoba and the Northwest of 4,670,770 for this year, an increase over last year of 641,518 acres, with a probable total grain yield of 150,000,000 bushels, being an increase of at least 21,000,000 bushels over 1902.

The fruit-raising interests are generally in a satisfactory condition, as are also dairying and stock-growing.

BANKS AND BANKING.

In nothing has the extraordinary tide of prosperity been so much in evidence as in the statements presented at the annual meetings of the Canadian banks, which show another year of increased earnings and expanded business. The figures show that the trade and commerce of the country and its general position are sound and satisfactory. There never has been such a high average all round of good bank reports as there has been this year. The most remarkable thing about these reports is that they are so uniformly of a favorable character. There has not been a single drawback ; not a single poor report amongst them, and some have made exceptionally large earnings. This is a state of things that has never been known before in the history of banking in the Dominion.

The statements of the Canadian chartered banks for April, May and June, 1903, are presented below. They show capital, reserve, assets and liabilities, average holdings of specie and Dominion notes, etc.:

LIABILITIES.	April, 1903.	May, 1903.	June, 1903.
Capital authorized.....	\$98,826,666	\$96,826,666	\$96,826,666
Capital paid-up.....	75,448,729	75,979,565	76,660,301
Reserve funds.....	46,258,442	47,608,280	47,973,814
Notes in circulation.....	\$55,877,647	\$56,949,119	\$58,865,845
Dominion and provincial Government deposits.....	\$6,122,332	\$7,666,491	\$8,005,086
Public deposits on demand in Canada..	110,474,577	109,397,451	111,298,423
Public deposits at notice.....	265,437,364	266,785,156	267,639,035
Deposits outside of Canada.....	36,276,446	37,442,446	36,235,955
Bank loans or deposits from other banks, secured.....	745,061	808,175	676,068
Due to other banks in Canada.....	2,808,514	3,223,674	3,842,403
Due to other banks in Great Britain...	10,836,344	9,196,745	8,180,084
Due to other banks in foreign countries.....	1,120,748	1,432,551	1,085,337
Other liabilities.....	12,693,227	12,746,722	12,281,956
Total liabilities.....	\$502,387,336	\$506,747,605	\$508,049,963

ASSETS.	April, 1903.	May, 1903.	June, 1903.
Specie	\$14,280,598	\$14,517,991	\$14,464,068
Dominion notes	28,085,124	28,849,046	29,062,337
Deposits to secure note circulation ..	2,802,931	2,802,931	2,869,962
Notes and checks on other banks	14,801,088	15,638,763	19,429,914
Loans to other banks, secured	745,556	798,104	676,157
Deposits with other banks in Canada ..	3,973,658	5,128,427	5,422,247
Due from banks in Great Britain	2,759,588	508,915	1,725,774
Due from other banks in foreign countries	18,176,513	18,255,648	15,221,888
Dominion or provincial Government debentures or stock	11,890,052	12,604,812	11,780,805
Other securities	52,781,764	52,328,325	52,376,054
Call loans on bonds and stocks in Canada	46,661,402	44,286,045	40,876,987
Call loans elsewhere	38,267,156	38,237,824	39,509,716
	\$228,225,408	\$238,456,881	\$238,425,984
Current loans in Canada	\$338,170,949	\$358,063,500	\$363,329,271
Current loans elsewhere	32,674,376	27,216,080	21,943,598
Loans to Dominion and Provincial Governments	2,695,158	2,586,320	1,641,117
Overdue debts	1,880,277	1,911,018	1,978,025
Real estate	863,218	842,176	840,775
Mortgages on real estate sold	760,624	752,890	738,065
Bank premises	8,173,742	8,230,738	8,306,370
Other assets	6,817,900	5,070,665	9,781,040
Total assets	\$634,762,038	\$638,123,930	\$641,985,372
Average amount of specie held during the month	\$18,649,719	\$13,872,063	\$14,067,080
Average Dominion notes held during the month	24,669,639	26,822,892	28,651,860
Greatest amount notes in circulation during month	60,033,041	58,255,828	59,865,662
Loans to directors or their firms	11,795,422	11,447,393	11,954,418

The statement for April, 1903, shows that there was a considerable expansion in the aggregate of current loans and discounts over that of the month of March, 1903, and, at the same time there is a distinct decline in call loans between April and March. While circulation is lower, there is a continued growth in deposits. A noticeable point in the statement, too, is the small relative amount of the items among assets of overdue debts, mortgages and real estate other than bank premises.

The statement for May, 1903, shows that the note circulation has increased over a million dollars compared with April. There has been a further reduction in call loans in Canada to the extent of upwards of two millions, but call loans outside of Canada remain practically unchanged.

The contraction in loans by Canadian banks during June, 1903, was the chief feature of the statement. There was a net decrease at home and abroad in the call loans of \$2,100,000, the cause being the large liquidation in stocks and the restriction in business on the Canadian markets. The trade advances or mercantile loans increased in Canada \$5,300,000, but the current loans abroad show a contraction equal to the expansion in the Canadian loans. The call loans at home last year increased during June \$4,500,000, and the call or short loans elsewhere in Canada increased during that month by \$8,100,000, while the current loans in Canada decreased in June, 1902, \$3,000,000, and those outside decreased some \$800,000. Comparing June, 1903, with the same month in 1902, the results are much more satisfactory in every way. The total call loans by the Canadian banks in June aggregated in round figures \$80,300,000, against \$92,100,000 in June, 1902. The trade loans of the Canadian banks for June amounted to \$385,200,000, against \$326,700,000 in June, 1902. The total loans

aggregated \$465,500,000 against \$418,800,000 in June, 1902. The note circulation for June shows an expansion of \$1,916,000 to \$58,865,000, and compared with the same month last year the total is \$4,912,000 larger. The public deposits increased during June last to \$1,901,000 for those on demand, and those on notice increased \$354,000, while the deposits elsewhere than in Canada decreased \$1,207,000. The total deposits of the three classes in June, 1903, compare as follows with the same items for June, 1902:

	1903.	1902.
Demand.....	\$111,238,000	\$105,137,000
Notice.....	267,639,000	239,812,000
Elsewhere.....	38,235,000	35,731,000
Total.....	\$415,172,000	\$380,680,000

It will be seen that the total loans of the chartered banks in June exceeded by \$34,492,000 the total loans in June last year. In this connection it is interesting to note that the paid-up capital of the banks, according to the current statement, is \$76,660,000 against \$69,584,000 a year ago.

The following figures of the note circulation taken from the Government statements for some years indicate the effect of the crop movement on the circulation:

	August.	September.	October.
1902.....	\$55,035,000	\$80,365,000	\$85,628,000
1901.....	51,352,000	56,027,000	57,354,000
1900.....	47,421,000	50,387,000	53,198,000
1899.....	41,446,000	46,682,000	49,568,000
1898.....	37,299,000	40,071,000	42,543,000

Application is being made for the incorporation of the Alliance Bank of Canada. This is one of the most important transactions in the history of the maritime banks. Negotiations are afloat to amalgamate a number of the smaller banks in the Maritime Provinces, the Bank of New Brunswick and the People's Bank being included in the plans of the promoters. According to the last Government statement of the chartered banks, these banks have a total paid-up capital of \$1,680,000, and a total reserve of \$1,420,000.

The Bank of Montreal has recently absorbed the Exchange Bank of Yarmouth. The transaction illustrates the wish of the large Canadian banks to enlarge their sphere of operations in the Eastern Provinces. By this purchase the Bank of Montreal will have nine branches in the Maritime Provinces.

Canadian bank clearings for the dates named at three of the leading cities, with comparisons were:

	July 23, 1903.	July 16, 1903.	July 24, 1902.
Montreal.....	\$21,538,948	\$29,951,684	\$19,459,242
Toronto.....	14,204,296	18,787,649	18,805,384
Winnipeg.....	4,503,439	4,908,569	3,220,942

The Minister of Finance has given notice of a resolution giving the Government power to increase the issue of Dominion notes from \$20,000,000 to \$30,000,000, with a reserve in gold or debentures of twenty-five per cent., guaranteed by the Imperial Government. For all notes issued in excess of \$20,000,000 the Government holds dollar for dollar in gold. The same will apply to all notes in excess of \$30,000,000. The present issue of Dominion notes, \$15,000,000, is unsecured, and rests upon the general credit of the country, and the reserve of \$5,000,000 is protected by a deposit of gold. Under the present amendment the increased notes will amount to \$22,500,000, and the reserve to \$7,500,000. The latter sum is to be applied to the creation of a gold reserve of ten per cent. for the protection of deposits in the Government Savings Banks, amounting to about \$60,000,000. Six millions out of the \$7,500,000 will be devoted to this purpose. In the event of the amount held as security for the redemption of Dominion notes not being sufficient to pay the Government notes presented for redemption, or should the amount so held be reduced below the required amount, it is proposed to authorize the Dominion Government to raise a loan to make good the deficiency.

BANKING AND FINANCIAL NEWS.

This department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

— On July 13 Charles Mailey, a messenger of the National Bank of Commerce, completed his fortieth year of service in that institution. He has been the confidential carrier of gold and paper money in all that time, and has handled over a billion of dollars. The payment for Alaska by the United States passed through his hands in gold, and he had the handling of the millions which were furnished to the Government by the bank during the war.

On the day after the Jay Cooke failure in 1873 he turned into the bank a thousand-dollar gold certificate and a five-hundred-dollar gold certificate. The receipt of the money was duly entered in his book, but the money disappeared, and its loss caused much anxiety to those responsible for it. Ten years later, in 1883, the money was found by pickers in a paper paper-mill in Boston, and was duly returned. It had gone in the waste paper from the bank.

Mr. Mailey was congratulated by the officers and clerks upon his long term of service. He has remained a messenger from choice, to escape the confinement of desk work.

—The Bowery Savings Bank has put in operation a system of "banking by mail," by which any one in any part of the world can open an account with the bank, and thus draw interest on money which he might otherwise spend or lose.

—Plans have been filed with the Building Bureau for a new ten-story apartment house with a banking house on the ground floor, to be built at the southeast corner of Fifth avenue and Sixtieth street for the Fifth Avenue Estates, of which Warner M. Van Norden is president. The office will have a portico front on Fifth avenue with columns and a facade of marble, brick and terra cotta. The building is to cost \$500,000, and the offices will be occupied by a trust company.

—John Gerken is the new President of the United National Bank, succeeding Henry W. Gennerich, resigned.

—Stockholders of the Stuyvesant Heights Bank, Brooklyn, have voted to increase the capital of the bank from \$100,000 to \$200,000.

—Louis H. Holloway, who has been connected with the Nineteenth Ward Bank for eighteen years, recently resigned as Cashier of that institution to become Vice-President of the Mechanics and Traders' Bank and to have charge of the branch of that bank at Madison avenue and Fifty-ninth street.

—J. H. Davis has been appointed an additional Assistant Cashier of the Seaboard National Bank.

—Bird S. Coler recently resigned as President of the Guardian Trust Co. and was succeeded by F. W. Woolworth.

—Joseph Andrews succeeds Edward T. Hulse as Assistant Cashier of the Bank of New York National Association.

—Greater New York's forty-eight trust companies had resources July 1, 1903, aggregating in excess of \$1,000,000,000. This aggregate is \$50,000,000 increase over July 1, 1902, when the resources of all the forty-three trust companies then in existence was \$996,946,916.

—M. Bauer, president of New York Chapter American Institute of Bank Clerks, has appointed the following delegates and alternates to represent New York Chapter and banks at the convention of the American Institute of Bank Clerks to be held in Cleveland, Ohio, on September 18 and 19, 1903:

Delegates—J. C. Martine, National City Bank; R. Hockey, Bowling Green Trust Company; J. F. Flaacke, Chemical National Bank; J. L. Miller, National Shoe and Leather Bank; C. C. Dickson, Title Guarantee and Trust Co.; W. M. Rosendale, Market and Fulton National Bank; G. H. Kretz, National Park Bank; J. A. Neilson, Brown Brothers & Co.; R. J. Phair, Fifth Avenue Bank; O. H. Cheney, Garfield National Bank; F. A. Knolhoff, Irving National

Bank; H. L. Braynard, Gallatin National Bank; S. Ludlow, Jr., Fourth National Bank; M. Bauer, delegate at large, American National Bank.

Alternates—F. W. Black, North American Trust Co.; E. F. Felckert, Plainfield Trust Co.; M. A. Fowler, Bank of the Metropolis; J. C. Emory, Seaboard National Bank; W. H. Purdy, Chase National Bank; C. S. Wandling, New York Savings Bank; Frank R. DeLuise, National Bank of North America; N. D. Alling, Nassau Bank; A. L. Ward, Van Norden Trust Co.; C. A. Ingalls, First National Bank, Stapleton, Staten Island; W. S. Pulsford, Merchants' National Bank; E. N. Wilson, Hanover National Bank; E. M. Riley, Central National Bank.

The banks from which these delegates and alternates have been selected have been requested to aid the young men in their effort to attend. Chapters from other cities are taking an active interest in the affair, and from reports which are coming in it is anticipated that the attendance will be large and enthusiastic. New York city should, of course, not be behind in the support of the work being done by the institute members, and for this reason special efforts are being made to insure all of the delegates appointed being in attendance. The men in charge of the New York delegation hope to send at least a car-load of delegates to represent the three chapters in Greater New York.

NEW ENGLAND STATES.

Boston.—Thomas N. Hart, who has been President of the Mount Vernon National Bank, recently resigned that office, continuing as a director. John H. Allen was elected President and J. Adams Brown, Vice-President.

—James B. Case has been elected Acting President of the National Bank of the Redemption, succeeding John E. Toulmin, deceased. Mr. Case has been a director of the bank for over fifteen years.

New Hampshire Banks.—The Board of Bank Commissioners has tabulated the results of the annual balancing of all the savings banks of New Hampshire, and an increase in deposits is shown during the year of more than \$3,600,000. The total resources of the banks have risen during the year from \$70,725,954 to \$73,563,211, an increase of \$2,837,256 and an average of \$473.66 to every depositor. The total surplus is about \$10,000,000 above the sums due the depositors.

MIDDLE STATES.

Philadelphia—The Tradesmen's Trust and Saving Fund Co. has changed its title to the Tradesmen's Trust Co.

Baltimore.—The Union Trust Company's Savings department has absorbed the business of the Monumental Savings Association.

—Messrs. Hambleton & Co. have taken possession of their new banking-house at No. 10 South Calvert Street. The new building, which will be for the exclusive occupancy of the firm, is one story high, twenty-seven feet wide and 160 feet long, and has a large burglar-proof vault and other modern equipments.

Pittsburg.—John S. Scully, President of the Diamond National Bank, has sold his holdings of the stock of that bank to a syndicate and has retired from the presidency. He remains President of the Diamond Savings Bank.

—The control of the Standard Security Trust Company of Pittsburg has passed to the Real Estate Company.

—Papers recently filed at Harrisburg for the merging of the American and Pennsylvania Trust Companies have been approved by the Governor and have been forwarded to Pittsburg. This is the step taken to bring together the two trust companies prior to their merger with the Colonial Trust Company. The capital of the new American Company is \$2,300,000. The company in its new shape will be in compact legal form to be taken over by the greater Colonial Trust Company when the plans of that corporation are completed. Further steps in the general merger are to be taken in the near future.

Newark, N. J.—The Fidelity Trust Company of Newark, recently made public its semi-annual statement.

During the last six months the company's assets have increased over \$18,000,000. The deposits are over \$24,000,000, an increase in six months of nearly \$9,000,000. The company has added \$462,000 to the undivided profit account, after paying a dividend in January last at the rate of twenty per cent. per annum.

—On July 23 circulars were issued describing the plans for merging the Essex County National Bank and the National Newark Banking Co. It is proposed that the capital of the consolidated bank shall be \$2,000,000 and surplus \$3,000,000.

New York Savings Banks.—Superintendent Kilburn on July 31 completed his tabulation of the reports of the 127 Savings banks of New York State, showing their condition on July 1. The total resources of the banks are \$1,221,425,001, as compared with \$1,167,683,337 July 1, 1902, and \$1,191,330,573 on January 1 last. The amount due depositors is \$1,112,418,552, and the surplus funds, figured on the market value of stocks and bonds owned, is \$108,454,320. The number of open accounts in the banks is 2,327,812. A year ago the banks held for depositors \$1,051,689,136, and surplus funds, at the market value, were \$115,540,560. The number of open accounts was 2,229,661.

The amount of money deposited in Savings banks during the year ended June 30 last was \$300,545,611, and the amount withdrawn, \$275,747,504, with interest paid amounting to \$35,942,167. For the previous year deposits aggregated \$290,840,380 and withdrawals, \$259,674,822. The interest paid was \$34,189,610.

The current expenses of the banks for the last six months were \$1,567,998, as compared with \$1,425,288 for the corresponding period last year.

SOUTHERN STATES.

Atlanta, Ga.—At a recent regular meeting of the board of directors of the Lowry National Bank, the board after declaring the usual semi-annual dividend of four per cent., elected Henry W. Davis Assistant Cashier. Mr. Davis became connected with the Lowry National Bank thirteen years ago, and prior to that he had been associated with the Atlanta National for some time.

Petersburg, Va.—George J. Seay, who has been connected with the Petersburg Savings and Insurance Co., and for nine years Cashier, resigned recently to become a partner in the firm of Scott & Stringfellow, bankers and brokers at Richmond. Peyton M. Pollard, for five years Assistant Cashier, has been elected Cashier, and James D. Mason, for some years connected with the Insurance department, has been elected Assistant Cashier. Mr. Seay will remain a director of the company.

New State Banks in Mississippi.—A report of State Auditor Cole, of Mississippi, for the year ended June 30 shows that there have been twenty-four new State banks organized and established in the past year. On the same date the amount of capital paid in was over \$6,500,000, or an increase over the previous year of \$1,086,982. The increase in individual deposits during the year was nearly \$5,000,000. The amount of individual deposits of State banks was, in round numbers, \$20,000,000.

Baton Rouge, La.—At the recent semi-annual meeting of the board of directors of the Bank of Baton Rouge a dividend of 7½ per cent. was declared, and the surplus fund was increased \$25,000, making the total \$300,000, on a capital of \$50,000. Deposits on July 1 were \$642,000 and total resources \$1,008,047.

Growth of New Orleans Banks.—Manager Edward Herndon, of the New Orleans Clearing-House, has prepared a statement which shows that on June 30, 1899, there were fifteen banks in New Orleans with capital representing \$4,580,200, having surplus and profits of \$3,443,893; deposits amounting to \$28,864,060; loans reaching \$19,727,510, and resources amounting to \$38,013,980. On June 30, 1903, there were nineteen banks; capital, \$7,960,200; surplus and profits, \$7,588,594; deposits, \$58,079,600; loans, \$45,076,220, and total resources, \$77,356,346. All of this practically shows a doubling in resources, almost a trebling in loans and heavy increases in surplus and profits and in capital.

Resolutions of Virginia Bankers.—At the convention of the Virginia Bankers' Association, held at Lynchburg June 19, the following resolutions were offered by Geo. J. Seay:

"Whereas, By act of Congress approved March 14, 1900, the dollar consisting of 25.8 grains of gold, nine-tenths fine, was made the standard unit of value in the United States, by which the value of all property shall be measured, tested and proved; and

Whereas, By the provisions of the said act the notes of the United States known as greenbacks, amounting to \$346,681,016, together with the notes of the United States known as Treasury notes, given for the purchase of silver bullion, amounting at that time to \$86,770,000, all of which notes, being used as currency, passing from hand to hand, each dollar for the value of a gold dollar, were expressly made redeemable in standard gold coin; and

Whereas, There are other forms of currency in daily use among the people, passing from hand to hand, each dollar for the value of a gold dollar, equally based upon the good faith and credit of the United States, and equally entitled to be measured, tested and proved by the same standard of value; and

Whereas, It was declared in terms in the said act that all forms of money issued or coined by the United States should be maintained at a parity of value with this standard; therefore, be it

Resolved, That we, the members of the Virginia Bankers' Association, in convention assembled, believe it to be wise that all forms of currency should be made equally redeemable

in standard gold coin, and that only by such provision can parity at all times and under all circumstances be effectively maintained, and that failure to so provide for the redemption of all forms of currency alike in the standard unit of value will continue to be construed as a discrimination against such forms as are not made so redeemable, and that we further believe that 'The only thing that can be done to make our financial system sound and safe and solid, is to get down to one legal tender, and that is gold, and then to bank upon a currency circulation enlarged beyond the present authorized issues of the National banks, and based upon the credit of the legitimate trade of the country and rigidly safeguarded under the law;' therefore, be it further

Resolved, That we urgently recommend, 'That proper laws be promptly enacted to render the gold standard inviolate, and, to that end, that the Secretary of the Treasury be directed to maintain at all times on a parity with gold the legal-tender silver dollars remaining outstanding, and that he be directed to exchange gold for legal-tender silver dollars when presented to the Treasury.

That the coinage of one million and a half of silver dollars per month, now required by law, should cease.

That the Secretary of the Treasury should be authorized to coin the silver bullion in the Treasury into such denominations of subsidiary silver coin as he may deem necessary to meet public requirements, and, as public necessities may demand, to recoin silver dollars into subsidiary coin;' and be it further

Resolved, That these resolutions shall be offered before the American Bankers' Association at its next convention."

A copy of the foregoing resolutions, along with a copy of the address made by Mr. Seay on the Aldrich and Fowler bills, has been forwarded to each member of the Virginia Bankers' Association, in accordance with a resolution adopted by the convention in Lynchburg, to the effect that a special committee be appointed to obtain the vote of each member of the association for or against the resolutions.

Louisiana State Banks.—Following is a statement of the condition of the 102 State banks, Savings banks and trust companies of Louisiana as reported to Bank Examiner L. E. Thomas on June 17 (cents omitted):

RESOURCES.		LIABILITIES.	
Demand loans.....	\$10,112,320	Capital stock paid in.....	\$3,275,700
Loans secured by mortgage.....	4,527,866	Surplus.....	4,259,883
Other loans and discounts.....	21,591,904	Undivided profits, less expenses and taxes paid.....	1,198,035
Overdrafts secured..	1,081,585	Due to other banks and bankers...	4,200,365
Overdrafts unsecured.....	414,715	Dividends unpaid.....	23,488

WESTERN STATES.

Minneapolis.—James Raymond has retired from the Presidency of the Northwestern National Bank on account of continued ill health, and has been succeeded by Wm. H. Dunwoody, formerly Vice-President. Mr. Dunwoody is prominently identified with some of the largest and most successful manufacturing enterprises in Minneapolis.

Omaha, Neb.—On July 1 the Omaha National Bank completed thirty-seven years of existence, and its report for that date shows that prosperity has attended the bank's career. Its capital is \$1,000,000, surplus and profits \$180,000, and deposits \$7,543,162. J. H. Millard is

President; Wm. Wallace and C. F. M. Grew, Vice-Presidents; Chas. E. Waite, Cashier, and Frank Boyd, Assistant Cashier.

Oklahoma Banks.—Bank Commissioner Paul F. Cooper has recently compiled reports of the State and National banks for the Territory of Oklahoma, the statement for the Territorial banks being as of June 10 and the National banks June 9. Following are some facts gleaned from the compilation:

	National banks.	Territorial.	Total for both classes.
Capital.....	\$2,792,500	\$2,028,390	\$4,818,890
Surplus.....	277,042	265,072	532,114
Undivided profits.....	543,451	888,122	1,431,573
Deposits.....	12,380,677	8,358,085	20,738,773
Total resources.....	17,326,150	11,156,553	28,482,504
Number of banks.....	70	232	312
Per cent. of reserve.....	30	52	41

These reports, says the "Oklahoma State Capital," are a wonderful commentary on the unbounded prosperity of Oklahoma, showing a *per capita* of deposits, based on a population of 600,000 of over \$34 for every man, woman and child in the Territory. This with an average reserve in the banks of forty one per cent., and a bank to each 2,000 of population, with small overdrafts, and large undivided profits, puts Oklahoma banks in the front rank of the States and Territories of the United States.

This showing is due largely to the splendid banking laws of Oklahoma, and the further fact that its terms are strictly carried out both in spirit and letter. In three years only three banks have been closed, thanks to the good work of the Commissioner, and these all belonged to one man, and depositors lost nothing.

Nebraska State and Private Banks.—Through the courtesy of the State Banking Board, THE BANKERS' MAGAZINE has been furnished with a compilation showing the condition of the 493 State and private banks of Nebraska at the close of business June 9. On that date the capital stock of these banks was \$7,976,250; surplus, \$1,401,852; undivided profits, \$1,745,666; deposits, \$37,395,149; loans and discounts, \$32,091,797; cash items, \$2,550,128; total resources, \$45,689,717.

PACIFIC SLOPE.

San Francisco.—At a meeting of the shareholders of the Bank of California July 16, it was unanimously decided to increase the capital stock from \$2,000,000 to \$3,000,000.

Los Angeles, Cal.—An agreement has been reached for merging the First National Bank and the Farmers and Merchants' National Bank into the First and Farmers and Merchants' National Bank. The new bank will have \$2,000,000 capital, \$500,000 surplus and nearly \$18,000,000 total resources. Isalas W. Hellman will be President, and John M. Elliott first Vice-President and manager. The other officers will be decided on later.

—At a regular meeting of the board of directors of the Southwestern National Bank, July 22, A. B. Jones was elected to the position of Cashier. Mr. Jones has been Assistant Cashier of the bank since its organization. The bank opened for business January 20, 1902. Its deposits are \$1,077,079.

Failures, Suspensions and Liquidations.

Kentucky.—R. P. Townsend, doing a banking business at Adairville, made an assignment June 29.

Massachusetts.—BOSTON—Wm. Bassett, a stock and bond broker, suspended July 27.

Michigan.—Charles Montague, proprietor of the Caro Exchange Bank, made an assignment July 13.

New Jersey.—On July 14, at the instance of the State Insurance and Banking Commissioner, the Attorney-General applied for the appointment of a Receiver for the Interstate Trust Co., of Jersey City. Various irregularities are charged with respect to the company's management.

New York.—The Cornwall Bank, at Cornwall-on-the-Hudson, was closed July 12 owing to defalcation of the Cashier. Arrangements have been made for paying depositors.

New York.—NEW YORK CITY.—On July 24 W. L. Stow & Co. and Talbot J. Taylor & Co., Stock Exchange houses, suspended. Edwin S. Hooley & Co., suspended on July 27.

Pennsylvania.—On July 30 the Doylestown National Bank was closed by the Comptroller of the Currency. It is reported that the President and Cashier have used the bank's funds in speculation, and that these and other losses will amount to about \$215,000, absorbing practically the capital and surplus. The bank was one of the old banking institutions of the State and on June 9 last reported \$105,000 capital, \$136,460 surplus and profits and \$980,222 deposits.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, August 1, 1903.

THE DECLINE IN THE STOCK MARKET last month was naturally the most absorbing topic of interest in financial circles. While Wall Street is only a part of the country and it is possible to exaggerate the influence of the transactions which are made within the walls of the Stock Exchange, nevertheless a large measure of attention is bound to be given to such movements as those which in recent months have occurred in the stock market.

The stability of the prosperity which extends throughout the country could not perhaps be more certainly attested than by the limited influence which the sweeping decline in security valuations has exerted. There were a few failures in Wall Street last month, but beyond that there has been no apparent ill effect upon the credit or condition of either commercial or financial concerns. In Wall Street itself there has been a clearing of the atmosphere, and an improvement in confidence which suggests a better state of affairs than the wild and excited speculation of a year ago promised to produce.

The stock market had recorded the lowest prices of the year on June 10, and for some time it looked as though the general tendency would be towards recovery. It was not until well after the succeeding month was entered upon that the market again developed pronounced weakness. Then came a slump which made a new record of low prices on July 15, and this in turn was supplanted by the record made on July 24, on which date nearly every stock on the active list touched figures not only the lowest for the year, but also lower than were reached in May, 1901, during the Northern Pacific panic.

While the decline in many cases has wiped out all the advance that had been made since 1900, yet so tremendous was the rise in values since 1895 that even the lowest prices touched in July average higher than the highest prices recorded prior to 1900.

	Lowest 1895.	Highest 1896.	Highest 1897.	Highest 1898.	Highest 1899.	Highest 1900.	Highest 1901.	Highest 1902.	Lowest 1903.

* Old stock.

+ N. Y., L. E. & Western.

+ Phil. & Reading.

+ U. P. Railroad.

In the foregoing table we give the lowest prices of twenty-five representative stocks in the year 1895, the highest in each of the seven succeeding years, and the lowest during the present year. With a single exception the lowest prices in 1903 were made in July, one stock being slightly lower in June than in July.

The above comparison shows how extensive had been the appreciation in value since the era of prosperity set in. The average advance from the lowest in 1895 to the highest in 1896 was 14 per cent. This was followed by an advance of $7\frac{1}{4}$ per cent. in 1897, 6 per cent. in 1898, $10\frac{7}{8}$ per cent. in 1899, $7\frac{3}{8}$ per cent. in 1900, 27 per cent. in 1901 and $10\frac{1}{4}$ per cent. in 1902. The rise from the lowest in 1895 to the highest in 1903 was $83\frac{1}{8}$ per cent., of which $88\frac{1}{8}$ per cent. was since 1900. The decline in 1903 was $89\frac{5}{8}$ per cent. or $1\frac{1}{2}$ per cent. more than the advance in 1901 and 1902.

A more suggestive method of comparing the changes in values would be to show the aggregate values of a specific block of securities at the prices reached in the different years. Taking as a basis 100 full shares of each of the stocks named, making a par value of \$250,000, the market value of the total 25,000 shares was :

	Highest value.	Increase from previous year.
1895.....	*\$85,375.00
1896.....	120,187.50	\$34,812.50
1897.....	138,137.50	17,950.00
1898.....	153,175.00	15,037.50
1899.....	180,250.00	27,075.00
1900.....	198,875.00	18,625.00
1901.....	268,500.00	69,625.00
1902.....	298,925.00	25,425.00
1903.....	*194,887.50	+99,037.50

* Lowest value. † Decrease.

These stocks which in 1895 could be purchased for \$85,374 had a market value in 1902 of \$298,925, an increase of \$208,550. In 1903 they lost \$99,037.50 of that value but were still valued at \$109,512.50 more than they were in 1895.

In the discussions in the financial and also editorial columns of some of the papers recently there has been much said about the indisputable fact that while stocks have been going down and people have been selling them, there have been purchasers for all the stocks sold. As that is always the case whether stocks go up or down, the fact proves nothing, nor just what was the conclusion to be drawn from it was not made clear. It certainly does not negative the proposition that the decline has caused very severe losses. Certainly the individual who bought stocks at \$117 last year and sold them at \$78 this year lost money, and the fact that some one was able to pay him \$78 for his shares does not put the seller in any better financial status.

There is no possible way of ascertaining who were the sellers and who were the losers in Wall Street in the last few months. But there is evidence that many people have lost not only the paper profits which they had in sight at one time, but also a part, if not all, their original investment. The effect will be seriously felt by individuals for some time to come, and it will have an influence to some extent upon the general situation.

One has only to turn away from Wall Street to find encouragement for optimistic opinion. The general industrial conditions, barring here and there some labor union difficulties, are encouraging. In some cases prices have fallen, but production is active and there is promise of good trade for some time to come. "The Financial Chronicle's" compilation of bank clearings for the first half of 1903 shows that outside of New York trade transactions continue to grow in volume. The clearings in 1903 amounted to \$21,565,000,000, as against \$20,511,000,000 in

1902, \$19,288,000,000 in 1901, and \$16,572,000,000 in 1900. In three years there has been an increase of \$5,000,000,000, or more than thirty per cent. New York city makes a less favorable showing, but the cause is to be found in the decrease in Stock Exchange speculation. In spite of that fact the clearings in the six months this year were \$35,697,000,000, as against \$36,910,000,000 in 1902, a decrease of only \$1,213,000,000, or a little more than three per cent.

Another evidence of the prosperity of the country, furnished by the same authority, is afforded in the record of gross earnings of the railroads during the first six months of the year. The total for 187 roads, with a mileage of 165,805 miles, is \$707,878,028, an increase over the previous year of \$84,271,452, or more than 13½ per cent. The increase in mileage was less than 4,500 miles, not quite three per cent.

This large increase is the more significant in that it follows five years of successive gains, while the aggregate increase this year is larger than in any previous year, the nearest to it being that of 1900 when the increase was \$69,000,000, or about twelve per cent.

In connection with this favorable showing an incident of last month may be mentioned here. The Erie Railroad on July 21 increased the rate of the semi-annual dividend on its first preferred stock from 1½ to two per cent. For years the owners of Erie stock never saw a dividend. On December 1, 1895, the present company was organized and on August 31, 1901, the first dividend of 1½ per cent. was paid. Since then it has paid three per cent. on the first preferred stock, and now it is upon a four per cent. basis. This requires more than \$1,900,000 per annum. The company earned nearly \$3,000,000 surplus above the three per cent. dividend in the year ended June 30, 1902, and probably did considerably better in the year 1902-8. No more striking illustration of the times could well be supplied.

Considerable comment was caused by the reported negotiation of temporary loans by some of the large railroad corporations last month. The Chicago, Burlington and Quincy Railroad, one of the constituent companies of the Northern Securities Company, placed a loan of \$5,000,000 on notes to run about eight months. The rate of interest, it is understood, was 5½ per cent., which with a commission of one-half per cent. made the rate equal to six per cent. The Union Pacific sold \$10,000,000 five per cent. notes to run a year and a half. These were placed on the basis of six per cent. also. In both cases the object of the loan was to provide for improvements and it was thought best not to attempt to issue bonds while the conditions were so unfavorable.

From several quarters there have come indications of an advance in the rate of interest upon investments. The decline in the market value of securities has of itself put many investments upon a higher basis. Recent attempts to sell new issues of municipal securities have disclosed the fact that investors are looking for larger returns. A number of 8½ per cent. issues attracted no bidders at all, and some of them were subsequently offered on the basis of four per cent. New York city last month sold \$3,500,000 of 8½ per cent. bonds at two per cent. premium, which makes them net about 8.42 per cent. A year ago it sold bonds at a price netting 8.28 per cent.

For speculative purposes bad crop reports were very much in vogue last month, and every unfavorable condition real or imaginary was grossly exaggerated. The Department of Agriculture report based on data for July 1 made the condition of corn 79.4 as compared with 87.5 a year ago. The acreage was reduced 4½ per cent. It is impossible to make any estimate of the yield, but the weather conditions since July 1 have been generally favorable.

The condition of winter wheat was reduced to 78.8 from 82.2 on June 1 and compares with 77 a year ago. The July weather has favored the crop and a large in-

crease in yield over last year is practically assured. Spring wheat is reported at 82.5 against 95.9 on June 1, but its condition has improved since July 1.

The demand for labor to harvest the wheat crop in the West has been urgent, and indicates what may be expected more accurately than Wall Street rumors.

Our foreign trade records now completed for the fiscal year ended June 30 are in the highest degree favorable. The exports of merchandise are valued at \$1,419,991,290, an increase of more than \$38,000,000, and were exceeded only in one year, in 1901, when they went above \$1,487,000,000. The imports were \$1,025,619,127, the largest ever recorded, and for the first time exceeding a billion dollars. The combined foreign trade reached the unprecedented aggregate of \$2,445,610,417, surpassing the record year 1901 by \$135,000,000. The balances for the year were: exports of merchandise, \$394,372,163; exports of gold, \$108,568, and exports of silver, \$20,081,768—a total of \$414,562,499.

The following table, prepared by the Bureau of Statistics, shows the remarkable growth in our foreign trade by decennial periods since 1853:

YEAR.	Imports.	Exports.	Total imports and exports.
1853.....	\$263,777,265	\$203,489,282	\$467,266,547
1863.....	243,335,815	203,964,447	447,300,262
1873.....	642,136,210	522,479,942	1,164,616,152
1883.....	723,180,914	823,839,402	1,547,020,316
1893.....	866,400,922	847,665,194	1,714,066,116
1903.....	1,025,619,127	1,419,991,290	2,445,610,417

Reference to the enormous production of pig iron is again in order, the weekly output having been further increased. On July 1 the furnaces in blast were producing at the rate of 414,636 tons per week, or at the rate of 21,500,000 tons a year. This is an increase of 103,686 tons weekly compared with a year ago. During the year ended June 30 the production in the United States was 17,821,307 tons as compared with 15,878,354 tons in the previous year.

The semi-annual statements of the trust companies in New York city and Brooklyn, covering the first half of the year, were issued a few days ago. There are forty eight of these institutions, and their total profits for the six months aggregated \$25,084,618, which compares with \$25,163,680 in the last half of 1902 and with \$25,317,998 in the first half of 1902. This shows a small decrease this year compared with each of the periods in 1902. But there are eight companies now doing business which were not in existence a year ago, the profits of which this year were \$800,900. The nine Brooklyn trust companies also show a gain over last year. Eliminating these companies there remain thirty-one New York companies, with profits of \$22,299,478 compared with \$23,377,534 in the same period last year, and with \$22,837,835 in the last half of 1902.

While there is shown a considerable falling off in profits by these figures, it does not indicate the full extent of the change that has occurred. Eleven of these thirty-one companies, from one cause or other, have made gains, while the remaining twenty, representing about seventy per cent. of the total profits of the city institutions, earned only \$15,667,009 compared with \$18,756,120 in the first half of 1902, and with \$18,540,209 in the second half. Here is seen a loss of \$3,000,000, or sixteen per cent.

THE NATIONAL BANKS.—The Comptroller of the Currency has issued a summary of the statements of the National banks of the country showing their condition on June 9. It marks a further expansion in the system, the number of banks in operation having increased to 4,939 from 4,845 on April 9, the date of the last previous statement, and from 4,585 on July 16, 1902. The aggregate capital is \$743,506,048, an increase of \$8,602,745 since April and of \$41,515,494 in the last year. The total surplus and profits amount to \$542,183,537, an increase of more than \$11,000,000

since April and of nearly \$60,000,000 since July, 1902. Individual deposits are again near a record point, the amount being \$3,200,993,509. The only time this figure was exceeded was on September 15, 1902, when the total was \$3,209,273,893. The increase since April is \$32,000,000 and since July 16, 1902, \$102,000,000. It was not until 1898 that the deposits ever reached \$2,000,000,000. Loans are larger than were ever before reported, the total being \$3,415,045,751, an increase since April of nearly \$12,000,000 and since July, 1902, of \$139,000,000. There has been a continuous increase in loans since September, 1899, the increase in that time being \$919,000,000. The aggregate resource are \$6,286,935,106, an increase since April of \$74,000,000 and in the year of \$278,000,000.

The following table shows some of the principal items of the statement submitted by the National banks during the past two years :

CONDITION OF THE NATIONAL BANKS OF THE UNITED STATES.

	Capital.	Surplus.	Individual deposits.	Gold.	Silver.	Legal tenders.
September 30, 1901	\$655,341,880	\$297,532,859	\$2,937,753,223	\$314,397,341	\$62,284,530	\$151,018,751

THE MONEY MARKET.—After the first of the month rates for call money were lower and a 2 per cent rate generally prevailed, although 3 per cent. was named on the last day of the month. Time money ruled at 6 per cent. much of the time. The market was affected by some large loans placed by railroad corporations. At the close of the month call money ruled at $1\frac{3}{4}$ @ 3 per cent., the average rate being 2 per cent. Banks and trust companies loaned at 2 per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 4 per cent. for 60 to 90 days, $4\frac{1}{2}$ per cent. for 4 to 5 months, and $5\frac{1}{4}$ @ $5\frac{1}{2}$ per cent. for 6 months on good mixed collateral. For commercial paper the rates are $5\frac{3}{4}$ per cent. for 60 to 90 days' endorsed bills receivable, $5\frac{3}{4}$ @ 6 per cent. for first-class 4 to 6 months' single names, and 6 @ $6\frac{1}{2}$ per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The weekly statements of the clearing-house banks were studied with exceptional interest during the past month, because of the severe

decline in the stock market. They failed, however, to disclose any intimate relation between the changes in the bank items and in the values of securities. Loans declined nearly \$8,000,000 in the week ended July 11 and \$1,500,000 more in the following week, but have increased nearly \$2,000,000 in the last two weeks. They are within \$5,000,000 as large as on June 27. Deposits decreased nearly \$12,000,000 in the first full week of the month, but in the last three weeks increased \$17,700,000. The banks hold \$12,000,000 more cash than on July 3, and their surplus reserve, which was down to about \$8,000,000 early in the month, now exceeds \$24,000,000. This is \$10,000,000 in excess of the surplus held a year ago.

FOREIGN EXCHANGE.—There was a substantial decline in rates for sterling exchange during the month and the gold export movement, which was of some volume early in July, ceased. Late in the month the market was alternately affected by sales and purchases of American securities for European account.

MONEY RATES ABROAD.—There was no change in the posted rates of discount of the European banks last month, but as July came to an end market rates were somewhat firmer. Discounts of 60 to 90 day bills in London at the close of the month were $2\frac{1}{2}$ @ $2\frac{5}{8}$ per cent. against $2\frac{5}{8}$ per cent. a month ago. The open market rate at Paris was $2\frac{1}{2}$ @ $2\frac{5}{8}$ per cent. against $2\frac{3}{4}$ per cent. a month ago, and at Berlin and Frankfurt $3\frac{1}{4}$ per cent., the same as a month ago.

\$700,000 compared with last year, but customs receipts alone were reduced nearly \$1,300,000. Expenditures were \$56,388,188, a reduction of \$425,000.

GOLD AND SILVER COINAGE.—The mints have been so busy with the Philippine coinage that the coinage of American coins has been merely nominal. In fact, not a single gold piece was minted nor a silver dollar. There were \$387,827.25 dimes and quarters coined and \$33,310 minor coins. The Philippine coinage amounted to 12,069,112 pieces.

NATIONAL BANK CIRCULATION.—The circulation of the National banks was increased \$3,675,837 last month, making the increase in the last twelve months more than \$58,000,000. The circulation based on bonds increased \$5,311,418 during the month and nearly \$61,000,000 in the year. The offer of the Secretary of the Treasury to refund 3 and 4 per cent. bonds into 2 per cents expired on August 1 and in the four months since it was made more than \$31,000,000 bonds have been refunded. The National banks have deposited since April 1 nearly \$50,000,000 of these 2 per cent. bonds to secure circulation and have nearly \$378,000,000 on deposit for this purpose, while about \$105,000,000,000 are deposited to secure public deposits.

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, \$4,411,200; 5 per cents. of 1894, \$4,611,450; 4 per cents. of 1895, \$10,469,750; 3 per cents. of 1898, \$7,025,020; 2 per cents. of 1900, \$104,995,200; District of Columbia 3.65's, 1924, \$1,689,000; State and city bonds, \$16,530,900; Philippine Island certificates, \$2,989,000, a total of \$152,711,520.

UNITED STATES PUBLIC DEBT.—There was practically no change in the aggregate bonded debt, but \$6,600,000 of 3 and 4 per cent. bonds were exchanged for 2 per cents and the latter now amount to \$526,752,800. There was a reduction of \$1,000,000 in the National bank-note redemption account, an increase of \$3,000,000 in gold certificates and a decrease of \$1,000,000 in silver certificates and of about \$700,000 Treasury notes of 1890. The net cash balance was reduced \$6,000,000 and the total debt less cash in the Treasury was increased \$5,000,000.

UNITED STATES FOREIGN TRADE.—The exports of merchandise in June amounted to only about \$95,000,000, the smallest for any month since August, 1902. There was an increase of nearly \$6,000,000, however, as compared with June a year ago. Imports of merchandise aggregated nearly \$82,000,000, an increase of nearly \$9,000,000 over June, 1902. The net exports were about \$13,000,000, a decrease of \$3,000,000. We exported \$7,740,000 gold and imported net nearly \$500,000 of silver. Not in years have the imports of silver exceeded the exports before. The record for the fiscal year ended June 30 shows total exports of \$1,419,991,290, the largest for any year except 1901; imports, \$1,025,619,127, the largest ever recorded, and net exports \$394,372,163, the smallest in seven years.

MONEY IN CIRCULATION IN THE UNITED STATES.—The volume of money in circulation increased in July nearly \$6,000,000 and is \$121,000,000 greater than it was a year ago. There was an increase of \$7,300,000 in gold certificates and of about \$1,000,000 in National bank notes, other forms of money showing a decrease.

MONEY IN THE UNITED STATES TREASURY.—The gross amount of money in the Treasury increased \$8,000,000 last month, but the increased issue of gold certificates makes the increase in the net amount in Treasury only \$1,600,000. In the vaults of the Treasury is now stored away \$1,173,000,000; all but about \$27,000,000 is in coin and bullion.

SUPPLY OF MONEY IN THE UNITED STATES.—Although some gold was exported from the United States in July the Treasury estimate of the supply of gold in the country on August 1 shows an increase of \$3,000,000 for that month. The total stock of money increased more than \$7,000,000, the increased issue of National bank notes with the gain in gold being the sources of supply.

BANKERS' OBITUARY RECORD.

Cable.—Elijah Cable, one of the founders of the Dime Savings Bank, Brooklyn, N. Y., and an extensive and successful manufacturer, died July 25. He was born in England in 1831, and came to this country at the age of fifteen.

Camp.—Samuel T. Camp, President of the Farmers and Mechanics' Savings Bank and Vice-President of the Middlesex County National Bank, Middletown, Ct., died July 7. He was born at Middletown in 1831.

Crispin.—B. F. Crispin, Jr., President of the First National Bank, Berwick, Pa., died July 10. He was born in Philadelphia in 1847, and was reared and educated there. After engaging in business in Philadelphia for some time, he went to Berwick in 1872, and about a year later entered the First National Bank as teller, subsequently becoming a director and President. His manufacturing interests were also extensive.

Du Bois.—Fred E. DuBois, Assistant Cashier of the Randolph (Vt.) National Bank, died June 28, aged forty-six years.

Elliott.—John Elliott, President of the Thompson Savings Bank, Putnam, Ct., was struck by lightning and instantly killed while walking to his home on the afternoon of July 14. He was fifty-five years of age, and was one of the most prominent citizens of the town.

Gardiner.—John Gardiner, President of the Southwestern National Bank, Philadelphia, died July 5. Mr. Gardiner was born at Albany, N. Y., in 1825, but since early in life he had been a resident of Philadelphia. He had been a member of the Franklin Institute for fifty-one years and was a liberal contributor to charitable organizations.

Giddings.—Captain Edward L. Giddings, a member of the banking firm of Tower, Giddings & Co., Boston, died July 28, aged sixty-eight years.

Heart.—A. L. Heart, Cashier of the Commercial National Bank, St. Joseph, Mich., died June 28.

Perrin.—James J. Perrin, a director of the Merchants' National Bank, Lafayette, Ind., and one of the old and wealthy bankers of the State, died July 27, aged seventy-four years. He was the founder of the Indiana National Bank at Lafayette and President of that bank until about a year ago, when it merged with the Merchants' National.

Powell.—Frank C. Powell, until a few months ago Cashier of the Laurens Banking Co., Dublin, Ga., died July 23.

Rourke.—John W. Rourke, who was connected with the Bank of California, San Francisco, for over thirty years, died July 18. He became connected with the bank in 1880, serving from that time to his death as bookkeeper and accountant.

Rowley.—Frederick N. Rowley, President of the First National Bank, Kalamazoo, Mich., died July 19, aged forty years. Mr. Rowley was one of the well-known young capitalists of Central Michigan and was engaged in a number of business enterprises in Michigan and other States.

Spalding.—Samuel Spalding, who was formerly President of the Marion National Bank, Lebanon, Ky., and who held that office for sixty years, died July 30. He was born at Calvary, Ky., in 1809.

Thompson.—Col. Wm. Thompson, President of the Miners' National Bank, Pottsville, Pa., died July 10 in his seventieth year. He recruited a company of Pennsylvania cavalry for service in the Civil War, and served under General Sheridan's command, receiving promotion to Colonel upon his recommendation.

Vanderpool.—Eugene Vanderpool, President of the Howard Savings Institution, Newark, N. J., died July 12. Mr. Vanderpool was born in Newark fifty-nine years ago and graduated at Princeton in the class of '64. He was one of the best-known gas engineering experts in the country and was president of two large gas corporations, and was also a director of the National Newark Banking Company, the Mutual Benefit Life Insurance Co. and other institutions.

THE BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SEVENTH YEAR. SEPTEMBER, 1903. VOLUME LXVII, No. 3.

THE CITY OF SAN FRANCISCO is preparing to extend a royal welcome to the convention of the American Bankers' Association, which meets in the Pacific Coast Metropolis October 20, 21, 22 and 23.

It is hoped that the attendance will be large, for aside from the benefits incident to the convention itself (and these are numerous and obvious), the opportunity of a trip across the continent and a visit to the great and beautiful Golden State, ought to prove attractive enough to insure the largest convention ever held. Occasions for obtaining a better knowledge of all parts of the country should be eagerly welcomed by the bankers, especially by those of the large cities who have close business relations with every geographical section. The vast and growing productive resources of the West are the solid basis of wealth, and the chance to learn more of this growth and development offers practical educational advantages to the banker.

The scenic beauties of the journey to the western coast also are by no means the least important feature to be considered by the banker who is trying to make up his mind whether to attend the convention or not. Many side trips can be arranged, by which the leading points of interest can be visited, and those desiring to pass their vacations in the West can find localities to suit every taste.

The bankers of San Francisco, and of the entire Pacific Coast, will do their utmost to give a genuine welcome to all who attend the convention. They will be especially pleased to be able to extend their greetings to a very large number of the bankers of the country.

The American Bankers' Association is now more fully representative of the banking interests of the country than it has been in its history, both in the number of its members and the work that is being done. There is a gradual widening of the scope of the association's activities, and the benefits accruing to the banking fraternity from the organization are growing year by year. Everything points to a successful and profitable convention at San Francisco.

THE WATER IN THE CURRENCY does not seem to have attracted as much attention as has been bestowed on the presence of such large quantities of this fluid in the capitalization of certain industrial and other corporations. When a promoter capitalizes his concern at a greatly inflated value, he can point to the example of the Government carrying in the statement of its assets items whose real worth is much below the figures stated on the books. The water or fiat thus represented in the silver and United States notes, allowing for the \$150,000,000 gold reserve, is upwards of five hundred millions of dollars.

Were the credit of the country not so high, owing to abundant revenues and general prosperity, this fact would be a constant menace to continued financial and commercial stability. As it is, it is an element that, upon the approach of any monetary disturbance, adds to the uncertainty and apprehension which then pervade the great centers of trade.

Attention is called to this element of weakness in our currency not because it is a matter of immediate concern, but for the reason that it is likely to cause serious trouble should the present general business activity be followed, as it probably will be in time, by a period of great dullness. Then the distrust is certain to be greatly increased by the large volume of cheap silver and United States notes now employed in business, but which under other conditions would accumulate in the money centers, expelling gold and pressing constantly upon the Treasury.

But of far greater concern to the business interests of the country is the proposal put forth to issue what is termed "asset currency" upon the present unstable foundation. Until the water is squeezed out of the existing Government issues, and some of the primary principles governing a sound currency instilled into the minds of those charged with guiding legislation, the introduction of an unsecured credit currency would be little short of a public calamity. Instead of curing any of the real or supposed defects in the currency system it would only aggravate them.

Whether the supply of gold in the country is adequate for the further expansion that would follow the introduction of a credit currency may be fairly questioned; but that matter may well remain in abeyance until the question of more immediate concern is taken up and settled—that is, whether we are to have the gold standard established in fact or not.

Although the act of March 14, 1900, declared gold coin to be the standard, it left the legal-tender status of silver unchanged and provided for the continuation of the coinage of the full legal-tender silver dollar.

The mere legislative declaration that gold shall be the standard, without effective provision for making the declaration good, amounts to little more than an expression of opinion so far as the standard of value and the currency are concerned. The act of March 14, 1900, while containing some features that have been of manifest benefit to the country, did not make the United States a gold-standard nation. We are still on the limping standard, as are France, Belgium and Switzerland. It was, however, because the act of March 14, 1900, took positive steps toward a complete and final abandonment of the silver folly, that public confidence was restored and the remarkable era of prosperity followed, other favorable influences, of course, contributing. And confidence will be further increased by strengthening the foundation upon which our credit system is based, and not by the introduction of the means whereby it may be easily weakened.

A sound monetary system and well managed banks are the best protection against financial panics that can be devised. The continued stability of our monetary system can not be assured while we have in circulation over \$500,000,000 of full legal-tender silver, worth less than half its face value, and an additional \$346,000,000 of Government legal-tender paper, besides a volume of over \$400,000,000 of National bank notes whose methods of issue and redemption are open to serious criticism.

The attitude of Congress toward currency legislation should be carefully watched, as dangerous proposals seem to be regarded with favor in certain influential circles, especially in the Senate. We need only mention the suggestions in the Aldrich bill for substituting State, municipal and other corporate securities for Government bonds as security for public deposits and the permission granted to the Secretary of the Treasury to practically suspend the redemption of National bank notes.

To grant the banks the privilege of issuing asset currency in the present mixed condition of the coin basis of credit could hardly afford the means of staying a monetary panic, but would probably make it much easier to extend inflation beyond prudent limits.

Pending the safe and proper introduction of an asset currency, considerable study might be profitably devoted to some problems not yet clearly understood. First, it might be well to inquire why, with net merchandise exports of over \$3,000,000,000 in the years from 1898 to 1903, we have imported but \$168,000,000 gold, net.

It will be essential before a safe bank credit currency can be had not only to broaden the foundation, but to determine whether we are to build upon the rock of gold or the shifting sands of silver and Government paper. Until these matters are decided the agitation for asset currency can only result in unsettling public confidence.

THE FIRST STEP IN CURRENCY REFORM, if any serious attempt is to be made this fall to deal with the question, should be an act providing for the gradual conversion of the legal-tender notes into gold certificates, using for that purpose the gold reserve in the Treasury. If this process were carried on over a series of years it could probably be done without the sale of bonds or without any disturbance of business. If the entire \$150,000,000 gold reserve were used for this purpose it would not contract the currency to the extent of a dollar. It would be a simple case of substitution of one form of paper for another; but the manifest advantage of a gold certificate is this: it is issued or paid out only when the Government receives the means, coincidentally, to redeem the certificate when presented, while a green-back may be paid out for services rendered the Government, for supplies consumed, etc.

In addition to the \$150,000,000 gold reserve, there is nearly \$100,000,000 of gold in the general fund, which with what would accumulate from time to time, could be used to retire the remaining green-backs. The legal tenders redeemed out of the gold in the general fund would be cancelled, but it is hardly probable that any diminution in the volume of the currency would result, the place of the green-backs being filled either by gold or National bank notes.

THE SILVER PROBLEM, too, must be faced sooner or later, and it is to be hoped that Mr. HILL, of Connecticut, will continue the fight he has been making to place the silver dollars upon a subsidiary basis.

Whether a bond-secured bank circulation can be given any adequate degree of elasticity or not, it is reasonably certain that even an asset currency would be greatly hampered by having the channels of circulation filled with silver certificates and Government paper.

But the proper treatment of the legal tenders and silver need not depend upon the real or supposed need of an asset currency. The demand for a scientific handling of these two potentially dangerous elements in the currency rests upon more important grounds. There can be no safer basis of banking than an adequate supply of gold. With that as the basis expansion is held within safer limits than when banking and the currency itself rest largely upon a depreciated base. Compulsory coin payments, on penalty of being summarily closed up, put a wholesome restraint on banking. We have a large and growing supply of gold, but in view of the heavy trade balance in our favor and the swelling of our debts, it should be much greater. The silver, legal tenders and bank notes will all have to be made payable in gold before it will be safe to permit banks to issue asset currency, which of course must also be convertible into gold at the holder's option.

THE RECENT FALL IN THE PRICE OF SECURITIES has undoubtedly given a shock to confidence. The fact that the downward course was arrested proves that there were interests powerful enough as yet to carry the load which has been imposed upon the markets by over-speculation. But this mere arrest of this dangerous tendency does not prove that the situation is not still somewhat critical. The fact that the general business of the country does not appear to have suffered as yet has been felt to be a reason for encouragement and for a hope that the era of prosperity has not yet elapsed. The eagerness with which the products of the country which are as yet unmaturing are watched shows how severe has been the blow which has been dealt to the properties represented by certain classes of securities. Whether the wave of prosperity has culminated and the country is now on a declining progress, is still uncertain.

The history of former critical periods in monetary affairs has shown that the effect of such speculative crises may be overestimated. The fall in many of the industrial securities seems to show that while these industries may not be unprosperous, they are not paying well enough to meet the dividend demands that must alone sooner or later determine the value of their capital and bonded indebtedness.

The crippling of any class of capitalists has an injurious effect on the great host of lesser men who depend on them for support. But while the real seriousness of the situation should not be overlooked or belittled, there are in the United States great powers of recuperation, and this spree of speculation may indeed bring the morning headache and regrets, but healthful conditions will return. The lesson may prove of value if it is made the text of a real repentance.

Foreign observers seem at this time to be pessimistic, but their jeremiads are not to be accepted without considerable reserve. The advances which the United States has made in her export trade and the successful invasion of foreign markets have aroused jealous fears. If it is true that we take a secret pleasure in the misfortunes of our dearest friends, how much more is it likely that we desire everything true which seems to point to the impairment of power of business rivals.

SOME SUGGESTIONS MADE in the MAGAZINE in regard to the possible improvement in the use of bank checks so as to fit them for employment as substitutes for bank notes altogether, instead of in part as now employed, have elicited remarks both favorable and unfavorable.

The banks of the United States, restricted in the use of the bank note, have by the use of the check built up deposit banking to an unprecedented extent. The increase of bank deposits represents the

effect of banking in placing the property of the nation in a form where it may be instantly available for exchange. The comparison of bank statistics of the past with those of the present, or rather the comparison of bank statistics when the issue of bank notes was almost without restriction, and when as now the banks issued no notes on their own credit, indicates an immense growth in deposit accounts. The growth of the wealth of the country is of course a main factor in this increase, but there can be no doubt that a larger proportion of present wealth is made more easily transferable by present banking methods than the proportion of the wealth of the country that was easily transferable through the earlier banking methods.

It is also probable that the highly differentiated banks of the United States, comprising institutions specialized to meet the wants of every kind of business, and adapted to handling the exchange of all forms of property, encourage to a greater degree the exchangeableness of even the least mobile forms of property to a degree unprecedented in almost any other country. It is also probable that even if the use of the credit bank note had not been abolished by the National banking laws and the ten per cent. tax but had been fully developed, that the increase of the deposit line would not have been so great. Forced to the use of the check as a means of transferring accounts, the banks have found it an efficient means of increasing their importance. But beyond a certain point the development of the use of checks has been stopped by the same cause that has abolished the use of the credit bank note. The people of the country have been accustomed to the employment of checks in business over an expanse of territory and to an extent not known elsewhere. Checks, however, are not used as yet for the minor exchanges, and this is because the law has prevented any attempt to do so. The suggestion that the check might be so developed, if the law did not prevent, as to become a substitute for all forms of money except coin and coin certificates, is criticised by saying that the people are not accustomed to them. This amounts to as much as saying that people cannot swim until they have learned how. But if the banks had a free hand in developing the use of checks for small exchanges, as they have had in developing their use for larger purposes, is it not possible that this difficulty might be easily overcome? But as a fact there are now large sections of the country in which checks are actually used in denominations of the smallest amounts and where the people fully understand their convenience and safety. Nor is it expected that checks will wholly supersede the use of real money, that is coin and notes secured by coin, but merely that they may possibly supply that addition to the currency of the country that so many now think can only be supplied by bank credit in the form of unprotected bank notes.

It is also not wholly without foundation, as the advocates of the bank note suggest, that the check and the bank note alike rest on the credit that creates the deposit account. But after all there is an important difference; the bank deposit must always exist against which the check is drawn, whereas in the case of the bank note there may have been an actual deposit or there may not. A bank with no real deposit line may possibly be tempted to issue and loan notes beyond its power of protecting the notes by a reserve, but a deposit account is the necessary preliminary for the drawing of a check, and the issue of the check depends not on the bank but the owner of the deposit. A bank with a deposit line of, say, \$100,000, if the free use of asset currency were permitted, might meet these deposits with notes. By so doing it would change its creditors from depositors to note holders, and would not meet its liabilities, but would have placed its liabilities in a form more likely to press on its reserves than they would have been had the customers used checks to transfer accounts among themselves.

The system of clearing which has made such rapid growth in all parts of the country enables checks to be exchanged and cancelled with a pressure on the reserves much less than would be the case were all transfers made by the use of bank notes. Theoretically the transfer by bank notes or by checks of accounts in the same bank or from one bank to another, amounts to about the same thing. When the bank is running normally as many notes are deposited as are paid out. When, however, notes are paid in they are not cancelled as checks are, and the accumulation of notes tempts the banker to unduly extend loans, whereas cancelled checks do not make him the victim of a belief in fallacious resources.

But the chief reason why a development of the check system would seem to be preferable to the adoption of an asset currency to impart elasticity to the monetary system, is that for almost half a century the banks of the United States have been using checks and have had no experience in the use of asset notes. The bankers of the present day have been accustomed to the use of a paper money all of which rests on the credit of a Government so strong that practically this paper money is the same as gold coin. Practically in this money credit cuts no figure. Practically again the banks are now doing business with checks, and with money, coin and paper, all of which is equal to gold coin. Of course the actual enactment has not been yet made that makes silver certificates and silver dollars payable in gold, but no one doubts that should the necessity arise the Government would strain every nerve to maintain the parity. There can under the present laws be no increase in the volume of existing paper money, except as the price of bonds or the supply of bonds may induce Na-

tional banks to issue new notes; but inflexibility of the existing paper money has the effect of retaining our gold and drawing new supplies from foreign countries. How would it be were an asset bank currency introduced even with all the stinginess of a timid experiment? No one can tell what the normal amount of money should be at any given time. Certain observations of statistics of the money market show that a given aggregate volume is presumably too great when bank reserves show a tendency to increase so as to reduce the rates for money, and that this aggregate is not sufficient when the contrary conditions prevail. If some all-powerful and all-wise financier, and according to popular opinion there are several of this kind in the United States, were really actuated by a pure desire for the public good and had the legal power to regulate monetary affairs under present conditions, he might by controlling the ebb and flow of gold to and from other countries seek to obtain the desired elasticity. He would however soon know that his power to regulate the ebb and flow of gold would be hampered by the fact that a temporary redundancy of the paper money would increase the outflow, while the cessation of this redundancy would tend to bring it back, and if paper money could be cancelled as it tended to accumulate, the outflow of gold could be stopped.

The fluctuations in wealth and prosperity caused by the good or ill fortune of our products and manufactures would be, at bottom, the cause which would determine the changes in demand for money, and the financial dictator would have to watch very carefully the action and reaction that continually go on between the business circumstances constituting prosperity and the reverse, and the supply of money.

If our present supply of paper money, based practically on gold as it is, may prove by the immobility of its aggregate a serious menace to adjusting the supply of money to the demand, would not a bank-note currency based simply on bank credit, added to our present supply, render the situation more difficult. Of course, theoretically, this new bank-note currency would be subject to cancellation, and those who advocate it seem to assume that it would thus furnish the elasticity required, but to effect this theoretical cancellation of these notes when they prove redundant has always been the point of difficulty. To effect this with the system of banks now doing business in this country is thought by many to be an impossibility. Even our assumed financial dictator could accomplish the needed redemptions with difficulty if at all, and what would be the result when left to the tender mercies of the conflicting interests of the money market?

Some extension of the use of checks, which from their nature bring about their own cancellation, would seem to be a solution of

the difficulty without any great change in our present paper currency. Such change in our present currency should be in the direction of bringing it into a still greater similarity to a gold certificate.

A PLAN FOR JOINT-METALLISM is put forth in an essay recently published by RIKITARO FUJISAWA, of Tokio, Japan. The essence of the plan is to permit holders of gold bullion when depositing it at the mints for coinage to deposit at the same time an amount of silver bullion not to exceed twenty per cent. of the gold brought to the mint. This silver is to be coined at a fixed ratio of 40 to 1; that is, the silver coins are to be of full market value, as distinguished from the present subsidiary coins and those of full legal-tender powers whose values have depreciated or are artificially sustained. These new coins are to be a legal tender for all debts of £10 and under, and for twenty per cent. of larger sums. Both the amount of the coinage and the quantity to be tendered in payment are to be subject to international regulation.

The principle relied on by the author of these proposals is that of limited coinage and limited debt-paying powers; no provision is made for gold redemption of the silver coins, which would probably not be necessary while the market value of the two metals corresponded to the coinage ratio. If, however, the new scheme did not arrest the decline in the value of silver, difficulty would arise. Doubtless Mr. FUJISAWA hopes to meet such a contingency by the provision for regulating the amount of silver that may be coined and the sum that may be tendered in payment of debts.

It is suggested that the change to a gold standard would be impracticable in China and some of the other silver-using countries which offer great commercial possibilities if effective measures are taken to check the depreciation of the metal now comprising their monetary standard. The desire for the extension of Oriental trade may lead the western nations to take an active interest in a problem which otherwise would be regarded as purely one of domestic concern.

THE AMERICAN BANKERS' ASSOCIATION held its annual convention in San Francisco eleven years ago. This fall the delegates will meet there again. The bankers of the city of the Golden Gate are taking measures that no shortcoming of theirs shall render the meeting less than a success.

The work of the association is occasionally heard of during the year. For the most part it is of a quiet and educational nature, endeavoring to cultivate the *esprit de corps* of the banking commu-

nity and to teach the isolated banker, immersed in his local business, that he belongs to a truly great tribe. Once a year, at this annual convention, the association breaks out into full bloom and reveals to the public the results of its silent efforts.

In the last eleven years the association has increased wonderfully in the number of its members and in its capacity for fulfilling the objects of its organization. This is the twenty-ninth annual anniversary which has been thus celebrated. The first years of the association's existence were comparatively uneventful. The success of the association in uniting bankers and doing away with a certain aloofness of spirit that had prevailed before the organization was thought of, manifested itself in the organization of associations composed of bankers within State lines. Strange as it may now seem, the organization of State bankers' associations had at first a detrimental effect on the organization which drew its members from all the States. There were jealousies aroused which at one time seriously affected the prosperity of the parent association. Sometimes considerable feeling was exhibited at the annual conventions over the election of officers, due to a struggle to secure the recognition of the State associations and give them a larger influence in the management of the American Bankers' Association. This difficulty was gradually overcome, and with the growth and increasing solidity of the central organization has been more and more assured.

A great factor in the success of the association during the last eleven years has been the protective department, which has run to earth many of the burglars and forgers and other criminals who seek to make the banks their prey. A membership in the association is to the average bank an almost perfect burglar insurance and an almost equal protection against the operations of forgers. The whole power of the organization, and this is not small, is pitted against the man who seeks to rob banks which are members. The annual reports of the protective committee are interesting documents and give an insight into that underworld in which the bank criminal seeks to find a precarious livelihood. Indirectly this branch of the association's work throws its shield over all the banks of the country, whether members or not, by removing from their hunting-grounds these human prowlers.

But in addition to this very obvious benefit conferred, the association, by its educational work among the employees of banks, is raising up for itself elements of future strength. There are other important lines in which the association is engaged, all of them conducive to the main object, which is to encourage and foster unity and good feeling among the banking guild. It has often been urged in criticism that the annual conventions of the organizations were more

calculated for social enjoyment than they were for carrying out the business and literary parts of the programme. But as social enjoyment, at least to the necessary degree to promote personal acquaintance among bankers, is in strict accordance with the provisions of the constitution, this criticism seems to be entirely wasted. There is no gathering where an ambitious banker can more easily or legitimately bring himself to the notice of his fellows. Personality here enjoys whatever it deserves. Another criticism that has frequently been made is that the conventions are not democratic. This is disproved by the fact that the wealth and resources of a bank have little to do with its representative attaining some of the prizes of the convention. The power to address the convention strikingly and agreeably has more to do with receiving nominations for office than mere banking prominence.

Perhaps the most important report in the public eye which will come up before this convention will be that of the committee appointed to draw up a plan for a bank currency. Whether this committee is as yet ready to make a complete report, is not known. If, however, the matter comes before this convention an interesting debate may be expected.

The growing numbers of the association require greater and greater accommodations at its conventions. At some of these held of late years there were some complaints that hotel room was insufficient. From the announcements made from San Francisco it is obvious that no such difficulty will be encountered there. The arrangements for transportation all seem to be progressing and to afford the most certain promise of pleasant tours across the continent.

FRANCHISES GIVEN BY MUNICIPALITIES to permit companies for the construction of works beneficial to the public are of late years the subjects of continued controversy, political and otherwise. These controversies grow out of the increasing value of the franchises as the municipalities grow in population and wealth.

As it is impossible to foretell what may happen in the future, it is easy to understand how the growth of cities has often increased the value of the street-car lines beyond all expectation. It is also not difficult to understand why the possessors of these franchises desire to make as much as possible out of them and that to avoid taxation as well as the envy and hostility which always manifests itself toward good fortune, the companies conduct their accounts so as to show themselves in as poor a condition as possible. The franchises that have increased in value are the ones that attract the most attention; the failures are objects of less conspicuous interest on the part

of the public, and yet there are probably as many failures in this line as there are successes.

The successful possession and use of rights and powers granted by municipalities calls for the concealment of their true value as far as possible. As the income increases so as to make the dividends on the nominal capital or bonds an object of envy, the course taken is to increase the stock by the process known as watering. The diluted stock does not show up so conspicuously, and the smaller per cent. of return on it affords a basis for the plea of poverty when taxation or even betterments of public accommodation are in question.

Much of this opportunity for concealment of the value of franchises arises from the habit so prevalent in this country of looking at principal more than upon income. In England and France, and in most countries on the Continent of Europe, wealth is measured more by the income than by the principal. A rich man is measured by the number of pounds or francs he has per year. To speak of millionaires or multimillionaires is an American custom which it is true is now more or less imitated abroad. It sounds more magnificent to say a man has a million or two millions, rather than to say he has an income of thirty or sixty or one hundred and twenty thousand dollars a year. One man may have a million invested in Government bonds and receive only an income of about thirty thousand dollars or less; another may have a million invested in stocks or bonds bringing five or six per cent., his income being fifty or sixty thousand. Another may have a million invested in business and may have an income of one hundred or two hundred thousand a year. They are all millionaires but not by any means on the same footing.

The public debt of the United States and all other securities are estimated on the basis of principal rather than of productive income. A man abroad is said to have so many pounds or francs or marks income from consols, rentes or other public funds. Here he has so many bonds or securities of such and such a face value, which is no indication necessarily of what they really are worth.

Of course the experts of the money market understand all about this and govern themselves accordingly. They reckon income as the real basis of value by which they estimate premiums and face value. But the system of talking of possessions in principal is deceptive and misleading to the general public, and fails to give an accurate statement of the real financial situation of individuals or companies.

The recent estimate of the losses of rich men are all vitiated by this system of estimate. When the price of securities fluctuates the principal may apparently swell or shrink, but the income does not materially change. Neither the losses nor gains of the ordinary holder of investments can be estimated in this manner.

If the value of the franchises of the companies amenable to taxation were estimated by earnings, by the actual gross income, there could not be so much concealment and evasion.

Congress requires of the National banks a semi-annual statement of their earnings, their expenses and losses, and no one need be in error as to the true value of bank capital. It is the earning power of capital that fixes its real principal value, and not the assumed face value which fixes the earning power and resulting net income. Of course it may be expected that the possessors of profitable municipal franchises will always be on the alert to make these profits appear as small as possible. Even if the right to have accurate returns of gross income was required by law some way of concealment could no doubt be devised. It would, however, be more difficult to do so, and public intelligence would find it easier to detect these devices. Less would be heard of watered stocks and dishonest speculators and promoters would have less chance to gull a confiding public.

It is believed that the principal value of securities would rise and fall more within reason, if the investing public could be educated to the habit of mind, which of course is that of successful financiers, of looking at income rather than principal. It is not hoped that a change in the point of view can be rapidly brought about. It is a matter of custom and education. Nor would it put a stop to extravagant speculation. • This will always crop out at times, and it is prevalent whatever the custom of the country in estimating the value of securities.

The manner of looking at investments in public funds in European countries as a matter of income rather than of principal has done much to educate the people there in correct financial views. It would not be a bad thing if our Government should gradually make a change in this direction.

THE LOW RATES FOR MONEY indicate a plentiful supply. Whether this is due to the comparative cessation of effort on the part of the promoters of speculative enterprises due to the setback received from the fall in the price of securities, or to the falling off of the business of the country, is a question. Rates for money are reasonable at the money centers and at the same time the reserves of outside banks, especially in the West, are growing.

The indications point to the fact that the temporary approach to panic rates in midsummer, at a usually dull season, were due to both foreign and domestic lack of confidence in a large number of securities that were seeking absorption by the investing public. The holders and underwriters who were carrying these securities in hope of their being taken off their hands required large sums to keep up their

margins and meet or arrange the loans they had made as underwriters. If there had been no such extraordinary demand the amount of money available would have been adequate for all normal business. The talk of the necessity of expansion of the currency under sudden speculative flurries at the money centers always arises. It would be very nice for speculators of all kinds if there were a way of creating unlimited supplies of what might for a time pass as money, whenever a pinch came. The relief which has since been felt is much more genuine than if it had been brought about by the use of a temporary credit currency. Even if the pinch had continued there is reason to believe that it would have been relieved by gold imported from abroad. Although the rates for foreign exchange have been close to the point of importation since the relief of the security market, there seems to be no necessity for more gold at present, although the general feeling is that it could be had if required.

The consultations in high quarters over financial legislation show how sensitive the political nerve is to any circumstance or rumor which seems to point in the direction of adversity. But with the coming of the present feeling of encouragement the talk of financial legislation will probably grow more faint. This encouragement grows stronger as it is discovered that relief from a serious situation was secured without Government help and by the use of the monetary resources on hand. In fact, while such shocks are to be deplored, and while it is perhaps too soon to conclude that the evil consequences of this particular shock have as yet all come to light, yet these difficulties are tests of strength and show whether the monetary system needs relief. Even if Congress should adopt the plans of some currency reformers who claim that by an automatic issue of credit bank notes stock-market panics could be greatly ameliorated, yet no one would be able to prove this claim except by actual test. The present system of currency has shown that it is able to take care of the situation of last month, without any of the subsequent evils that might have followed and which many claim would follow the sudden injection of a credit currency issued for such special occasions. The soothing influence of the temporary supply of money might lull the patient so that he would forget the danger he was in. Speculation injurious to the public might be encouraged to continue until the last condition might prove beyond relief. As it is the financial public seem to have escaped the danger, but had such a narrow escape and so close a view of the peril that they are inclined to a wholesome repentance, which of course will last until the next time.

THE OUTLOOK FOR FINANCIAL LEGISLATION.

The President seems to be inclined to call an extra session of Congress to consider, among other important matters, the necessity of financial legislation. From a political standpoint it is essential that every precaution should be taken to prevent the unsettlement and disturbance of business conditions which have seemed to be inseparable from the year of the presidential election. It is plain that if the country passes through the fall without any symptoms of serious break in the general prosperity, the dominant party will have less difficulty in maintaining its position. There have, however, been warnings that it might be unwise to rely too implicitly on present appearances. The breakdown in speculative and promoting circles, while it seems to have been measurably repaired, has attracted renewed attention to the weak points of the monetary laws. Many symptoms have been visible that the lack of power to enlarge the volume of the paper currency might possibly place a check on legitimate enterprise. Whether it is as yet conclusively proved or not that the best way to impart greater elasticity to the volume of money is by enlarging the note-issuing functions of the banks, the advocates of what is called an asset currency have been so positive and insistent that there is a general popular impression that they are right. They are positive enough to be correct.

Despite the serious objections that have been made by the critics of the use of bank credit in this way under the system of banks in the United States, yet there is a great temptation to try the experiment, from a political standpoint.

There is little doubt that the first effect of permitting the banks to issue a credit currency would be to maintain the present high tide of enterprise. In other words, unfavorable conditions in the money markets might, for a considerable period, be suppressed or at least obviated by the injection into the circulation of an asset currency. An increase in the monetary volume is at first productive of relief. Whether the increase is gold, or new issues of bank currency based on bonds, or silver certificates, or greenbacks, or asset currency, the first effect would be to stimulate weakening trade. It is the subsequent conditions resulting from this artificial stimulation that are really the subjects of the greatest concern. When gold is employed to meet the demand for more currency the natural laws of trade provide for the withdrawal of any surplus from circulation. This is not the case with paper currency based almost wholly on credit. The gold supply is regulated by the demands of the markets of the whole world. The supply of credit paper is regulated by the demand of the country in which it is issued. When the supply of paper becomes redundant, if its credit still continues good, it remains in circulation to stimulate unhealthy speculation; if its credit is shaken, the demand for redemption aggravates the tendency to panic and crisis.

Under the renewed and reiterated asseverations of the asset currency advocates the minds of the general business public have been favorably affected

towards these issues, and with this favorable state of public opinion the temptation to politicians to use again this remedy to tide over the financial dangers of the presidential year will be very great indeed. It is to be hoped that the President will not be led into recommending any currency plan in which the method of retirement is not as surely foreseen and provided for as the method of issue. Easy is the descent, but the toil, labor and suffering come when unwise steps have to be retraced. The financial history of the country should impress everyone with the difficulties which surround the withdrawal of paper currency once issued. Without going further back than the period of the Civil War, the legal-tender notes of that period are still with us, and hardly now does any legislator or statesmen advocate their unqualified retirement. The silver certificates are even more firmly entrenched. The National bank note, based on bonds, stands as yet firmly in the way of improvement.

These three defective forms of paper currency ought to be a constant and solemn warning against putting out a fourth form until every precaution is taken that another mistake shall not be made. As to an asset bank currency, its advocates assure the public that it must be safe and elastic; that is, automatic in its redemption and reissue, but the methods and principles which are to insure elasticity are vaguely stated, and by experts believed to be inadequate.

As has been said, the positiveness of assertion as to asset currency being a panacea for existing financial ills has impressed the popular mind, but it has made no such impression on the minds of the majority of the bankers who are the class best qualified to judge. The general consensus of the bankers of the country is not as yet in favor of an asset currency. The plans so far proposed involve the injection into the money of the country of an element of credit different from that to which bankers have become accustomed in their business of the last forty years. They are opposed to this as they were generally to the injection of a larger element of credit into the basis of the legal tenders, the silver certificates and the Treasury notes. In fact, the struggle has during the last forty years been to bring the paper money of the United States to the condition of a gold certificate, by the increase of security and reserves. The proposition to introduce an asset bank currency is a departure from this course of evolution. But whatever the President recommends, the question will have to be threshed out in Congress. It is said that the Senate is the controlling factor, and the Senate of late years has been less sound on monetary subjects than the House. But when the House realizes, as it must when the advisability of introducing an asset currency is brought before it, how deeply the bankers are interested, measures of this kind, even if receiving the approval of the Senate, will be severely scrutinized.

SCHOOL SAVINGS BANKS.—J. H. Thiry, of Long Island City, N. Y., has just published the eighteenth annual report of the operation of School Savings banks in the United States. The School Savings bank system is now in practice in 797 schools of eighty-five cities of twenty-one States in America, and the scholars of those schools have saved \$2,138,747.57 of which \$1,616,780.74 has been withdrawn, leaving a balance of \$521,966.83 due depositors to January 1, 1903.

THE CONCENTRATION OF BANKING CONTROL.

The "Atlantic" for August contains an article on the concentration of bank controlling interests by Prof. Charles J. Bullock. The conclusion arrived at by the Professor is that such concentration cannot to any serious extent influence the general extension of banking facilities to the public under the system of free National and State and private banks. This control of a number of banks more or less powerful, whether manifested by consolidation or affiliation, means that some powerful clique of capitalists or business men need larger banking facilities in their business, and they therefore seek to own or control the policy of the banks for their interests, just as they own or control the policy of their manufactories, railroads and other producing agencies.

But apart from the larger scale on which such banking control is exerted there is nothing new about it. There is hardly a bank in the country, little or big, that was not started with the view of benefiting the business of the men who organized the banks. The directors of the banks are generally successful business men in their community, and they are the largest and safest borrowers from their own banks. The suggestion has been made that a law should be passed restricting directors from borrowing from their own banks. If this proposal should be adopted a great blow would be struck at the prosperity of our banks. Of course when a bank fails the directors are commonly somewhere in evidence in the wreck. Naturally their business and fortunes are bound up with those of the bank. The so-called combinations and consolidations of banks and their control by certain interests are merely a growth of the principle which has built up the banking power of the United States.

There is perhaps a certain phase of what is called monopoly in these great aggregations of banking power under one control; but this is merely the advantage that greater power has over less. This strong aggregation frees itself from competition by being able to do something that the ordinary bank cannot do. But there is a distinction that may be made between a combination of banks and many of the industrial combinations. The bank combination became necessary because there were industrial or other combinations already in existence which required a powerful instrument. The weight was there and the powerful lever to move it had to be made. Many of the industrial trusts seem to have been formed, not because there was any special requirement for them, but in the hope that they would find somehow the work they were calculated to do. Some seem to have been disappointed in this expectation.

The difference between monopoly banking and free banking, as we see it in the United States, is so greatly to the advantage of the latter when real services to the business public are compared, that anything which appears to savor of monopoly at once attracts attention and tentative disapproval. But there is no real monopoly in the banking control adverted to. A great company, like the Standard Oil, for instance, requires great banking facilities under its control, just as it requires great facilities for storage and transpor-

tation. Whatever its policy in one case is its policy in the other. But if there are other great companies or capitalists who require banking facilities as great, there is nothing in the constitution or laws which prevents them from effecting such a combination of banks as may furnish them.

There is considerable sympathy wasted on the imaginary depositors whose money goes to make up the funds which are said to be controlled through these combinations of banks. It is asserted that the great borrowings of the controlling interest prevent these customers from obtaining their due proportion of accommodation. This seems puerile. A depositor can draw out his funds when he pleases and put them where he can best serve himself. The great banks have probably very few accounts which they retain by force, as it were, of their malign influence. People keep their accounts there because they see their advantage in doing so.

In the control of all our banks by the people who are the best users of capital lies the secret of the prosperity of our banks, and through them of much of the prosperity of the country. The difference between the free banking prevalent in the United States and a monopolistic system of banks consists in the fact that where the monopolistic system prevails the business men cannot control their banks or dictate to them when they desire loans to the same extent that the business men of the United States can. It may be said that the monopolistic system is the safer. In some respects no doubt it is. But the man with the single talent who buried it in a napkin, to preserve its bloom we suppose, although he was safe, did not make as much money as the man who kept his ten talents in circulation.

The excess of profits to the banks of the United States and their customers far offsets any losses that can be ascribed to the freedom of the system. With individual banks it is only through consolidation or affiliation that the necessary power can be obtained for the great transactions which increase in number as the country grows in wealth. That these aggregations of banking capital can be successfully made and applied shows the vitality and adaptability of the system of independent banks. In fact, the individual weakness of our banking institutions has been one of the points which has often been assailed by adverse criticism. That they are as a rule individually too weak to indulge in some of the expedients used by stronger institutions may be admitted. But these expedients are the most dangerous of any employed in banking, and some very strong banks have met disaster by their use. The restrictions imposed by our system on too reckless a development of credit probably not only conserves the banks' interests but they are likewise a great benefit to the business men generally, as they diminish the advantage which the exclusive dealer in money is apt to have over the business men in other avocations. A banker gains sufficient advantage in handling and distributing the wealth of the area his bank drains, for the benefit of that area, without having the additional advantage of creating money based on the credit which accrues to him from his position. This power of distributing credit without reference to the proportion it bears to actual wealth is apt to cause loss by the seeking of outside investment to the neglect of home resources. One of the problems of modern finance is to control the use of credit. It is like the genius who expands when released from his bottle, with no limit to his cloudy stature, but who shrinks back into his insignificant receptacle, upon the most frivolous representations.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE's Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

LIABILITY OF BANK FOR REFUSAL TO PAY CHECK—AMOUNT OF DAMAGES.

Supreme Judicial Court of Massachusetts, Suffolk, June 17, 1903.

WILEY vs. BUNKER HILL NATIONAL BANK.

A bank is bound to honor checks drawn upon it by a depositor if it has sufficient funds belonging to him when the check is presented, and the funds are not subject to any lien or claim, and for its refusal or neglect so to do, it is liable to an action by the depositor.

The depositor may recover for the damages that are the natural and reasonable consequences of such refusal, and special damages may also be recovered, if they are properly alleged.

In the case of a trader, injury to his credit may be inferred from the fact that he is a trader, and substantial damages may be awarded upon proof of that without anything more.

In the case of a person who is not a trader, if no special damages are alleged or proved, nominal damages at least may be recovered.

This was an action to recover damages for the refusal by the defendant to honor certain checks drawn on it by the plaintiff against a deposit subject to check which he had with the defendant, and which was more than sufficient to meet the checks so drawn when presented. There was a verdict for the plaintiff, and the case was taken up on exceptions by the defendant to the refusal of the presiding judge to give certain rulings asked for by it, and to the giving by him of certain rulings requested by the plaintiff.

MORTON, J.: A bank is bound to honor checks drawn on it by a depositor if it has sufficient funds belonging to the depositor when the check is presented and the funds are not subject to any lien or claim, and for its refusal or neglect to do so it is liable to an action by the depositor. (Nat. Mahaiwe Bank vs. Peck, 127 Mass. 298; Carr vs. Nat. Security Bank, 107 Mass. 45, 48; Dana vs. Third Nat. Bank, 13 Allen, 445, 448; Marzetti vs. Williams [1830] 1 B. & Ad. 415; Rolin vs. Steward [1854] 14 C. B. 495; Am. Nat. Bank vs. Morey [Ky.] 69 S. W. 759; Hopkinson vs. Foster [1874] L. R. 19 Eq. 74; 2 Parsons, Notes & Bills [1st Ed.] 62, 63; 2 Daniel on Neg. Instr. [3d Ed.] § 1643; 5 Am. & Eng. Ency. of Law [2d Ed.] 1059, 1060.)

The cause of action, though sometimes spoken of as in the nature of a tort, arises out of a breach of the contract implied from the relation of the parties that the banker will honor the checks of the depositor, and the party aggrieved may recover, as in other cases of a breach of contract, for the damages that are the natural and reasonable consequences of the breach.

Special damages may also be recovered if they are properly alleged. (*Martetti vs. Williams, supra*; *Rolin vs. Steward, supra*; *Hopkinson vs. Foster, supra*; *Prehn vs. Royal Bank* [1870] L. R. 5 Eq. 92; *Larios vs. Bonany y Gurety* [1873] L. R. 5 P. C. 346; *Fleming vs. Bank of New Zealand* [1900] A. C. 577; *Patterson vs. Marine Bank*, 130 Pa. 419, 433; *Schaffner vs. Ehrman*, 139 Ill. 109; *James vs. Cont. Bank*, 105 Tenn. 1; *Svensen vs. State Bank of Duluth*, 64 Minn. 40; *Am. Nat. Bank vs. Morey* [Ky.] 69 S. W. 759; *Robey vs. Oriental Bank*, 2 S. C. R. [N. S.] New So. Wales, 56, 63.)

In the case of a trader, injury to his credit may be inferred from the fact that he is a trader, and substantial damages may be found and given upon proof of that fact, without anything more. In the case of a person who is not a trader, if no special damages are alleged or proved, nominal damages at least may be recovered. In the present case the declaration alleges that the plaintiff was and had been a trader engaged in the business of buying and selling coal and wood in Charlestown, and there was evidence tending to show that his business amounted to \$150,000 yearly. It was competent, therefore, for the jury to find and award substantial damages, and the ruling requested, that the plaintiff could recover only nominal damages, was rightly refused, unless the rulings requested in regard to set-off should have been given. For reasons already given, the first request was also rightly refused, as was also that part of the second which sought to limit the defendant's liability to the amount of the plaintiff's funds in its hands, or to the amount of the check or checks that were refused payment. The rest of the second request was given.

The remaining question relates to the right in equity of the defendant to set off, by reason of the plaintiff's insolvency, against the deposit, two unmatured notes made by the plaintiff and discounted and held by the defendant. This is an action at law, and the defendant concedes that there is no right of set-off at law. But it contends that, the plaintiff being, in fact, insolvent at the time when the checks in question were drawn and presented, it had the right in equity to refuse payment, and to apply the deposit to the notes held by it against the plaintiff, notwithstanding they had not matured. No question is made as to the defendant's right to deduct the demand notes from the plaintiff's deposit, but the plaintiff contends that neither in equity nor at law had the defendant the right to set off the notes that were not due. It is to be observed that the answer does not, in terms at least, aver that the defendant had a right to an equitable set-off, and acted thereunder, though it alleges that the plaintiff was, in fact, insolvent prior to the presentment of the checks. But this objection has not been taken. At the time when the defendant refused to pay or honor the check in question, no proceedings had been instituted by or against the plaintiff to have him adjudged insolvent. He had not made the common-law assignment which he subsequently made. For aught that appears, he was in good standing and credit, and could have gone on indefinitely as he had been going on, unless confronted with unfavorable conditions. The defendant required him to make a statement of his assets and liabilities, which he did, and thereupon, it appearing that his liabilities exceeded his assets, the defendant decided that he was insolvent, and refused to honor checks which he had previously given, and claimed the right to set off the unmatured notes against the deposit. If proceedings in insolvency or bankruptcy had been instituted by or against the plaintiff at or

before the presentment of the checks, or even if the plaintiff had made an assignment at common law for the benefit of his creditors, the case would no doubt have stood differently.

The defendant has cited many cases, including several from the Supreme Court of the United States, in which it contends that the doctrine of equitable set-off has been applied in favor of banks and others under circumstances similar to those in this case. The last case cited from the United States Supreme Court is *Scott vs. Armstrong*, 146 U. S. 499. It was there laid down that where mutual credits and obligations have grown out of and are connected with the same transaction, insolvency on the one hand will justify setting off, in equity, the debt due upon the other. The Chief Justice said, in the course of the opinion, "In the case at bar the credits between the banks were reciprocal and were parts of the same transaction, in which each gave credit to the other on the faith of the simultaneous credit, and the principle applicable to mutual credits applied," and it was held that, under the circumstances there shown, there was a right of set-off in equity. The case would hardly seem to warrant the broad rule contended for by the defendant. But without undertaking to review all the cases cited by the defendant, and conceding, as the defendant contends, that the right of equitable set-off exists independently of statute and of insolvency or bankruptcy, we think that the present case is concluded by *Spaulding vs. Backus*, 122 Mass. 553. In that case the Court said: "Whatever may be the rights of a party whose debt is due and payable to compel an insolvent debtor to set off a claim against him not due—which question we are not called upon here to decide—we are clearly of opinion that a party whose debt is not due has no equitable claim to have it set off against a debt of his own, already due, in the hands of a party who is insolvent."

It seems to us that this is decisive of the case before us. (See, also, *In re Commercial Bank Corp. of India and the East Smith Flemings & Co.'s Case*, L. R. 1 Ch. App. 538.)

It is to be observed that the jury returned a verdict for the plaintiff, and they must be taken to have found that he was solvent, according to the usual meaning of that term (*Thompson vs. Thompson*, 4 Cush. 127; *Lee vs. Kilburn*, 3 Gray, 594; *Peabody vs. Knapp*, 153 Mass. 242), at the time when his checks were dishonored.

Exceptions overruled.

FRAUD IN PROCURING SIGNATURE TO PROMISSORY NOTE—WHEN INSTRUMENT VOID IN HANDS OF BONA FIDE HOLDER.

Supreme Court of Nebraska, June 3, 1903.

SHENANDOAH NATIONAL BANK vs. GRAVATTE.

When the signature of an illiterate person is obtained to a promissory note, by the payee fraudulently inducing him to believe that he is signing an instrument of an entirely different character, without any fault or negligence of the maker, the note cannot be enforced, even in the hands of a *bona fide* holder.*

*This rule has probably been changed in those States where the Negotiable Instruments Law has been adopted. That statute provides:

"A holder in due course holds the instrument free from any defect of title of prior parties and free from defenses available to prior parties among themselves, and may enforce payment of the instrument for the full amount thereof against all parties liable thereon."

This general language would seem to cover such a case as that stated in the syllabus.

This was an action on a promissory note, alleged by the plaintiff to have been executed and delivered by the defendant Pfeifer to his codefendant, and afterwards, in the usual course of business, before maturity, and for a valuable consideration, indorsed and delivered to the plaintiff. The defendant Gravatte made default. Pfeifer filed an answer, admitting that he signed and delivered the instrument, but alleging that his signature thereto was obtained by fraud, in that the agents of the payee falsely and fraudulently represented to him, at the time he signed the instrument, that it was merely a receipt for fruit trees; that he relied upon such representations, and believed them to be true, and was thereby induced to sign the instrument. The fraud in procuring the note, and the negligence of the defendant Pfeifer in giving the same, were the only questions presented to the jury by the court. The jury returned a general verdict for the defendant Pfeifer, and judgment was given accordingly.

ALBERT, C. (omitting part of the opinion): The sole contention of the plaintiff in this court is that Pfeifer, in signing the instrument, was guilty of negligence, and that, therefore, the defense of fraud is not available as against the plaintiff, who, on the face of the record, must be held to be a *bona fide* holder of the note.

In support of this contention we are cited to *Dinsmore vs. Stimbirt*, 12 Neb. 433, 11 N. W. 872, wherein this court held that, to enable a party to resist the payment of a negotiable note in the hands of a *bona fide* purchaser, on the ground that it was procured through fraud and circumvention, the maker must show that he is not chargeable with any laches or negligence, or misplaced confidence in others. The last clause, "or misplaced confidence in others," states the law a little too strongly against the maker, and perhaps stronger than the Court intended to state it, because in the second headnote the Court says that in such case the jury should be told that, to make the defense of fraud available, the defendant must show that he was not guilty of any negligence in signing the paper. If full effect were to be given to the clause, "misplaced confidence in others," it would preclude the defense of fraud in all cases where the maker of the note is tricked into signing it, because in all such cases there must necessarily be the element of misplaced confidence.

That the defense of fraud is not precluded in all such cases is clear from the holding of this court in *Willard vs. Nelson*, 35 Neb. 651, 53 N. W. 572, 37 Am. St. Rep. 455, where the rule is thus stated: "When the signature of an illiterate person is obtained to a promissory note, by the payee fraudulently inducing him to believe that he is signing an instrument of an entirely different character, without any fault or negligence of the maker, the note cannot be enforced, even in the hands of a *bona fide* holder." Such is the rule generally given by text writers. (*Daniel on Negotiable Instruments*, § 849; *Randolph on Commercial Paper*, § 1893.)

That being the rule, and as the question of negligence was one for the jury, the only question presented is whether the evidence is sufficient to sustain a finding that Pfeifer, in signing the note, was free from fault and negligence. The plaintiff relies on the testimony of Pfeifer himself to show that he was guilty of negligence. His testimony shows that he is a man 73 years of age, that he is a German, understanding the English language imperfectly, and unable to read it at all.

His evidence also shows that the payee of the note had previously induced him to sign an order for some \$300 worth of fruit trees upon the false and fraudulent representation that he was signing an order for \$20 worth. This, the plaintiff contends, was sufficient to put Pfeifer on his guard in subsequent dealings with him.

But while the evidence shows that the note in question was signed subsequent to the foregoing transaction, and after Pfeifer had learned of the fraud practiced upon him therein, it also shows that Gravatte was not present when the note was signed, but that it was presented to Pfeifer for his signature by Gravatte's agent, who was accompanied by a real estate agent, who spoke and wrote both English and German, and appeared at the time to be disinterested. When the note was presented to Pfeifer for his signature, according to his testimony, Gravatte's agent represented that it was merely a receipt for the "head man," and was necessary in order to get some trees which Gravatte had agreed to furnish Pfeifer to replace some previously delivered, which had died. The real estate agent examined the paper, and confirmed the agent's statement as to its nature, and assured Pfeifer that it was all right. Upon these representations Pfeifer signed the instrument.

Assuming that this testimony is true, as we must, for present purposes, we do not think it can be said, as a matter of law, that Pfeifer was guilty of negligence in signing the instrument. In fact, he did what most men would have done under like circumstances. He availed himself of the best and only means at hand for informing himself of the contents of the paper. We think the evidence was ample to warrant the submission of the question of negligence to the jury, and to sustain a finding that Pfeifer was free from fault and negligence in signing the note.

It is, therefore, recommended that the judgment of the district court be affirmed.

Barnes and Glanville, *CC.*, concur.

PER CURIAM: The conclusions reached by the Commissioners are approved; and, it appearing that the adoption of the recommendations made will result in a right decision of the cause, it is ordered that the judgment of the district court be affirmed.

POWER OF SAVINGS BANK TO HOLD STOCK OF OTHER BANK—LIABILITY.

Supreme Court of Nebraska, May 20, 1903.

HILL vs. SHILLING.

A Savings bank organized under the laws of Nebraska, may acquire title to shares of stock of another bank, where such stock is taken in compromise or discharge of the indebtedness of an insolvent debtor, and where no circumstances casting suspicion on the transaction are shown, but it fairly appears that the directors of the bank acted in good faith, and in the belief that the acceptance of the stock was for the best interest of the bank.

After acquiring the stock, the Savings bank becomes subject to any liability thereon the same as other stockholders.

(Syllabus by the Court.)

The Merchants' Bank, of Lincoln, became insolvent, and was placed in the hands of a Receiver. After exhausting the assets of the bank, the claims allowed against the same being still unpaid, the court directed the Receiver to institute suit against its several stockholders to enforce their lia-

bility upon their respective shares of stock. The Lincoln Savings Bank and Safe Deposit Company was also in the hands of a Receiver, and, among the assets reported by the Receiver were thirty shares of \$100 each of the stock of the Merchants' Bank.

The Receiver of the Merchants' Bank, in compliance with the order of the court, commenced this action against the Receiver of the Savings Bank and Safe Deposit Company, and other stockholders of the Merchants' Bank, to recover upon the statutory liability of said stockholders, and obtained judgment against the Savings Bank and Safe Deposit Company in the sum of \$3,575.90. The parties stipulated the evidence upon which the case was tried, and the circumstances under which the Savings Bank became possessed of the stock were agreed upon as follows:

"That on September 27, 1892, one D. L. Brace was the owner of thirty shares of stock in the plaintiff bank, and on said day he borrowed, and the defendant bank loaned to him, the sum of \$2,500, evidenced by a note of that date due January 1, 1893; that said note was payable to the order of the defendant bank, and signed by D. L. Brace, the bank taking said shares of stock as a collateral to the said note; that on February 23, 1893, by mutual agreement between said D. L. Brace and the defendant bank, the said thirty shares of stock belonging to said D. L. Brace were taken up and canceled by said plaintiff bank, and the thirty shares of stock involved in this action were issued and delivered to Mr. Miller, the secretary of the bank, as hereinbefore agreed, with the mutual understanding between said D. L. Brace and the said defendant bank that, at any time when he could pay said \$2,500 note and interest thereon, he could take up, and the said bank would surrender to said Brace, said thirty shares of stock; that the court shall take and accept of these facts, and consider the same as evidence in the case. It being further agreed that D. L. Brace, above-named, was on February 23, 1893, and ever since has been, insolvent, and that the stock referred to was listed by the Receiver, J. E. Hill, as the property of said Lincoln Savings Bank, and that no dividends have been paid upon said stock since February 23, 1893."

Article 3 of the charter of the Savings bank is as follows: "The business to be transacted, is receiving money on deposit, paying interest thereon, investing the money of said corporation in bonds, notes, mortgages and other securities, the renting of vault boxes, and receiving and keeping in the vaults of said corporation, papers, securities, and such other valuables as may be deposited with said corporation for safe keeping; the purchasing or renting of such real estate as may be necessary for a place or places of doing and transacting the business of said corporation, and selling, leasing, mortgaging or otherwise disposing of real estate so acquired."

DUFFIE, C.: The plaintiff in error insists that by its charter the bank was restricted in its business to receiving money on deposit, paying interest thereon, investing its money in bonds, notes, mortgages and other securities, and that it had no authority or power to invest in stocks or to become a stockholder in another corporation, and thus endanger or place in jeopardy the savings of its depositors. *Bank of Commerce vs. Hart*, 37 Neb. 197 is relied on as an authority for this position. It was there held that a banking corporation organized under the laws of this State had no power to become a stockholder in an insurance company. The opinion shows that Hart was indebted to the bank in the sum of \$20,000, and, when sued upon his note, claimed to have made payment of

something over \$14,000 by a sale to the bank of certain shares of an insurance company through one Johnston, its Cashier. Accepting the theory of the transaction as given by Johnston as true, and that a sale of the stock had been made, the question fairly arose whether a banking corporation organized under the laws of this State could make a direct purchase of the shares of stock of another corporation; and this question, following the great weight of authority, was determined in the negative. The case at bar, however, presents a very different question, viz., whether a bank, in order to secure a debt due from an insolvent debtor, may take from him shares of stock in another corporation in settlement of his liability. The general rule undoubtedly is that this may be done.

In *Bank vs. Hart*, *supra*, it is said: "It is doubtless true that the bank could legally take the stock of another corporation as security for a debt previously contracted. Possibly it might make a loan on the strength of the stock as security at the time. On this point the authorities are not in harmony, and, as it is not material here, we do not decide it. An emergency might arise when a bank's board of directors would be justified in taking the stock of another corporation in settlement, adjustment, or compromise of a doubtful claim or debt, acting in the honest belief that only by so doing could a serious loss to the bank be averted. None of these reasons, however, existed in the case at bar, or, if they did, the record before us does not disclose them."

Whether the Savings bank might take this stock as collateral to the loan made to Brace, is not, we think, material to be determined. At the time the loan was made, no statute of the State existed directing what investment such bank should make of its funds, or what security should be taken on loans made.

Our present statute, section 31 of chapter 8 of the Compiled Statutes of 1901, directing the investment of funds of a Savings bank in bonds of the United States or of any State in the United States, or in the public debt or bonds of any city, county, township, village, or school district of any State of the United States which shall have been authorized by the Legislature of the State, or loaned on negotiable paper secured by any of the above-mentioned classes of security or upon notes or bonds secured by mortgage lien upon unincumbered real estate, etc., was not enacted until 1895, three years or more after this loan to Brace was made; and the fact that the Legislature undertook to direct what security should be taken upon loans made by a Savings bank in this act, leads us to believe that prior to its enactment the general understanding was that collateral other than that named in the statute might be accepted by such banks as security for money loaned to its customers. However this may be, the stipulation of facts entered into between the parties is clearly to the effect that, at the time the Savings bank accepted this stock in payment of the loan, Brace was insolvent, and, in the absence of any showing that the stock was worthless, the presumption must obtain that the directors of the bank acted honestly in the transaction, and believed that the stock was valuable, and that they were serving the interests of the bank in accepting it in discharge of this claim against an insolvent debtor. There is no intimation that this stock was taken with any intention upon the part of the Savings bank to obtain a controlling interest in the plaintiff bank, or that it was contemplated to speculate in this stock. Upon its face the transaction bears the stamp of an honest endeavor by the directors of the

bank to secure a demand due the corporation from an insolvent debtor, and the authorities are numerous that such a transaction will be upheld. (*Latimer vs. Citizens' State Bank* [Iowa] 71 N. W. 225; *Tourtlot vs. Whithed* [N. D.] 84 N. W. 8; *First National Bank vs. Nat. Exchange Bank*, 92 U. S. 122; *Holmes Mfg. Co. vs. Holmes Metal Co.* 127 N. Y. 252; *Thompson on Corporations*, § 5719; *Morawetz on Corporations*, §§ 1648, 1649.)

The Savings bank having become the owner of the stock, was liable thereon as any other stockholder. (*Bank vs. Case*, 99 U. S. 628.)

We recommend the affirmance of the judgment.

CHECK—WHEN ACCEPTANCE THEREOF BINDING.

Supreme Court of Kansas, June 6, 1903.

EAKIN vs. CITIZENS' STATE BANK OF NESS CITY.

A bank check is a bill of exchange within a statute requiring acceptances to be in writing, and providing that "if such acceptance be written on paper other than the bill, it shall not bind the acceptor, except in favor of a person to whom such acceptance shall have been shown, and who, in faith thereof, shall have received the bill for a valuable consideration."

A. T. Eakin sued the Citizens' State Bank of Ness City upon its promise, by a telegram dated September 21, 1901, to pay a check upon it for \$130 given him by Howder & Hall on June 3, 1901. The district court sustained a demurrer to the petition upon the ground that, under the provisions of section 9 of chapter 14 (running section 548) of the General Statutes of 1901, such an action would not lie, except in favor of one who received the check for a valuable consideration upon the faith of the acceptance. This section and the one preceding it, to which it makes reference, read as follows:

"Sec. 8. No person within this State shall be charged as an acceptor of a bill of exchange, unless his acceptance shall be in writing, signed by himself or his lawful agent.

Sec. 9. If such acceptance be written on paper other than the bill, it shall not bind the acceptor, except in favor of a person to whom such acceptance shall have been shown, and who, in faith thereof, shall have received the bill for a valuable consideration."

MASON, J.: It was not claimed in the petition that the plaintiff received the check on the faith of the acceptance. In fact, it is distinctly alleged that he received it before the acceptance was made. Therefore the statute quoted applies, and is fatal to plaintiff's action, if a bank check is to be deemed a bill, within the meaning of the statute. Plaintiff, as plaintiff in error, cites many authorities to the effect that a bank check is not a bill of exchange. There are certainly differences to be noted between a bank check and an ordinary bill of exchange. It is not important to inquire whether these differences are such as, for general purposes, to require classifying the former as a separate kind of instrument from the latter, rather than as a special form of it. We are here concerned only with the question whether the term "bill of exchange," as used in this statute, is intended to include a bank check. A legislative interpretation of long standing argues for an affirmative answer. The sections quoted were parts of chapter 20, p. 71, of the acts of 1859. Section 4 of the same act originally read "that all bonds, notes, or bills of exchange, made negotiable by this act, shall be entitled to three days of grace

in the time of payment." This section in the General Statutes of 1868 shows an amendment by the addition of the words "except bank checks," after the words, "bills of exchange," and this amendment has remained to the present time. This clearly shows that at the time of the amendment the Legislature gave the statute the meaning contended for by defendant in error.

The precise question was decided in *Risley vs. Phenix Bank*, 83 N. Y. 318, although the language involved was that of section 8 above quoted, instead of section 9. In the opinion it is said: "The check was a bill of exchange, within the statute that no person shall be charged as an acceptor of a bill of exchange unless his acceptance shall be in writing." This decision has almost controlling force, since the Kansas statute seems to have been borrowed from New York through Missouri; and, while this decision was rendered in 1881, it was based upon earlier decisions that a check is a bill of exchange (not referring to this statute, however), rendered before the adoption of the statute by Missouri. We follow this authority, and hold that a bank check is a bill of exchange, within the meaning of the statute referred to.

The judgment of the district court is affirmed. All the justices concurring.

*RECEIVER FOR NATIONAL BANK IN VOLUNTARY LIQUIDATION—POWER
OF FEDERAL COURT TO APPOINT—POWERS OF.*

United States Circuit Court of Appeals, Eighth Circuit, March 9, 1903.

KING vs. POMEROY.

A Federal court has power to appoint a Receiver for a National bank.

A Receiver so appointed may enforce the individual liability of the stockholders for the debts of the bank.

The remedy of a creditor's suit given by the statute is cumulative and not exclusive.

The First National Bank, of Frankfort, was located at that town, in the State of Kansas, on April 13, 1891, and the defendant, Pomeroy, owned seventy shares of its stock, of the par value of \$100 per share. That bank went into voluntary liquidation under section 5220 *et seq.* of the Revised Statutes [U. S. Comp. St. 1901, p. 3503] on April 6, 1891. It was insolvent, and the Comptroller of the Currency was requested to appoint a Receiver of its property, and he refused to do so on the ground that he had no jurisdiction over the affairs of a bank in voluntary liquidation. Thereupon, on April 13, 1891, a creditor of this bank, a citizen of the State of Missouri, filed a bill against it in the United States Circuit Court for the District of Kansas, wherein, for reasons it is unnecessary to state, it prayed for the appointment of a Receiver of the assets and credits of the bank and the liabilities incident thereto, to the end that he might convert them into money and liquidate its liabilities. The bank appeared in the court, and consented to the appointment of a Receiver, and he entered upon the discharge of his duties. He gathered the tangible assets of the bank, converted them into money, and distributed the proceeds, until, in December, 1898, he reported that these assets were all disposed of except \$665.14 in cash, that the unpaid liabilities of the bank were still \$36,301.74, and he prayed for directions regarding the enforcement of the liabilities of the shareholders.

On September 5, 1899, H. D. Stone, a creditor who had proved his claim against the estate of the bank, intervened in this suit, pleaded his claim, the cash in the Receiver's hands, the disposition of all the tangible assets of the

bank except this, the indebtedness of the bank, the names and addresses of its stockholders, and prayed that the court would ascertain the necessity of the enforcement of the liability of the shareholders, that it would make an assessment upon them, and that it would appoint a Receiver to collect this assessment. On February 12, 1900, the court made an interlocutory decree, in which it found the facts set forth in the intervening petition to be true, that the amount of the assessment necessary to pay the debts of the bank was 38.84 per cent. of the par value of the stock, that an assessment of that amount be made, and that the amounts of this assessment should be paid by the respective shareholders to the Receiver who had theretofore been appointed in the suit within sixty days from the date of the order. The assessment upon the stock of the defendant, Pomeroy, under this order was \$2,716.80. It is for this amount, upon this state of facts, that the Receiver of the circuit court has brought the action now before us. The court below held that these facts stated no cause of action, and dismissed the case.

Before Caldwell, Sanborn and Thayer, Circuit Judges.

SANBORN, Circuit Judge: When a corporation becomes insolvent, all its property and all the liabilities of the guarantors of its obligations constitute a trust fund pledged to the payment of its debts. And in cases where through fraud or maladministration this fund is being diverted from those who are entitled to receive it, the power is vested in, and the duty is imposed upon, courts of equity to appoint a Receiver, to direct him to convert these trust funds into money, and to distribute the proceeds among the creditors. (*Sawyer vs. Hoag*, 17 Wall. 611, 632; *Hayden vs. Thompson*, 71 Fed. 60, 66, 17 C. C. A. 592, 598.) Such a suit falls within the jurisdiction of a court of equity because it is a suit to execute a trust, because it avoids a multiplicity of suits by each of many creditors, and because the creditors have no adequate remedy at law.

The Receiver appointed in such a proceeding is the hand of the court to gather and distribute the trust funds, and in the execution of its orders he has the power and the authority of the court, so that when it is said that the Receiver in the action now in hand is without authority or power to maintain this suit, the real contention is that the circuit court of the district in which this insolvent bank was located had no jurisdiction to enforce the liability of its shareholders in the proceeding before it. There is nothing in the suggestion that the court may have a power to enforce the liability of the shareholders with which it cannot invest its Receiver. If the court has the jurisdiction to enforce this liability, the Receiver whom it appoints and directs to do so has all the power of the court to receive the money and to maintain actions to recover it. Receivers of courts of equity appointed in the judicial administration of the affairs of insolvents are, in the absence of restrictive statutes, empowered to enforce the rights of the creditors as well as the rights of the debtor, and there is no restrictive legislation in this case limiting the power of the Receiver to maintain this action.

It is conceded in this case that the court below lawfully appointed the Receiver, and that by his agency it rightfully collected the debts due to the bank, converted its tangible assets into money, and distributed its proceeds to the creditors. But the contention of counsel for the defendant in error is that the circuit court had no power by the hands of its Receiver to collect the amount lawfully owing from the shareholders to the creditors, because the

latter did not proceed to enforce this liability by the particular suit in equity pointed out by the provisions of section 2 of the act of June 30, 1876, c. 156 (19 Stat. 63 [U. S. Comp. St. 1901, p. 3509]), and because the Comptroller of the Currency has never authorized or directed the institution of this action against the shareholders.

A brief reference in chronological order to the legislation which conditions the soundness of this position will best present the questions it raises. The jurisdiction of the court below sitting in equity to appoint a Receiver, and through him to administer the affairs of an insolvent corporation, to collect the trust fund pledged to its creditors, and to liquidate its debts, vested in that court when it was established. It existed long before the act of 1864, which authorized the formation of National banks, and the act of 1876, which granted the new remedy upon which counsel now insists, were enacted, and it still exists. It was general and comprehensive. It included all cases of fraudulent diversion or maladministration in which controversies arose between citizens of different States, and it is conceded that this was such a case. This jurisdiction required no special act of Congress to give it effect, but it attached to and embraced every corporation as it came into existence, unless by some act of Congress its extent was curtailed or diminished.

By the act of June 3, 1864, 13 Stat. 99, Congress authorized the formation of National banks, made certain provisions for the supervision and the liquidation of their debts, and then declared that they should not be subject to any visitatorial powers other than such as were authorized by that act or were vested in the courts of justice. (Rev. St. Sec. 5241 [U. S. Comp. St. 1901, p. 3517]). The courts of justice had power to appoint Receivers, and to liquidate the debts of all insolvent corporations, when this act was passed. That power necessarily remained in those courts, and embraced the National banks as they came into existence, except in those cases in which this jurisdiction was withdrawn from the courts by that or some other act of Congress. The act of 1864 provided that in certain cases the Comptroller of the Currency might appoint Receivers to liquidate the debts of the National banks and to enforce the liabilities of their shareholders. Under this legislation the Comptroller became a special tribunal, with limited powers, authorized to act in cases specifically named in the statute, but in no other instances. In all other cases the power of appointment of Receivers, of liquidation of the debts of the banks, and of enforcement of the liabilities of the shareholders remained in the courts as it existed before.

The cases in which the Comptroller was empowered to appoint Receivers and to enforce the liability of shareholders were: (1) Where the bank had refused to pay its circulating notes (section 5234, Rev. St. [U. S. Comp. St. 1901, p. 3507]); (2) where it failed to maintain its capital at the minimum (section 5141, page 3462); (3) where it failed to maintain its reserve (section 5191, page 3486); (4) where it failed to redeem its circulating notes, or to select a place at which it would redeem them (section 5195, page 3492); (5) where it failed to dispose of its stock taken as security within six months (section 5201, page 3494); and (6) where it failed to pay up its capital stock and refused to go into liquidation (section 5205, page 3495).

Conceding now that in all these cases in which the power to appoint a Receiver and to enforce the liability of the shareholders was vested in the Comptroller by the act of 1864, that authority was thereby withdrawn from

the courts under the familiar rule that, where the same act creates the right and prescribes the remedy for its enforcement, that remedy is exclusive, still the fact remains that in all the cases in which no such power was vested in the Comptroller the jurisdiction and authority of the courts remained unimpaired and plenary. Thus, full jurisdiction still remained in the courts of equity, to appoint a Receiver to liquidate the debts of an insolvent bank and to enforce the liability of its shareholders where the transfers of notes or other evidences of debt, assignments of mortgages or other securities, deposits of money, bullion, or other valuable things, and payments of money were made by the National banks with a view to give preferences in contemplation of insolvency in violation of section 5242, Rev. St. [U. S. Comp. St. 1901, p. 3517], as well as where a bank had gone into voluntary liquidation under sections 5220 and 5221, page 3503, and its funds were being fraudulently diverted from the *cestuis que trustent*. The conclusion that this power still remained in the courts of equity under the act of 1864 is not only a rational deduction from the fact that this part of their general jurisdiction over such corporations, which existed from the time of their creation, was neither expressly nor impliedly taken from them by that act, but, in so far as it relates to banks in liquidation, it is the unavoidable effect of sections 5205, 5220 and 5221, Rev. St. [U. S. Comp. St. 1901, pp. 3495, 3503], when they are read together. Sections 5220 and 5221 and those immediately succeeding them provided that any banking association might go into voluntary liquidation under the direction of its shareholders by a vote of those owning two-thirds of its stock. Section 5205 provided that, if a bank refused to go into liquidation, the Comptroller might appoint a Receiver, and enforce the liability of its shareholders. The conclusion is irresistible that, if it did go into liquidation, and if it did not fall into any of the other classes of cases in which the Comptroller was authorized to appoint a Receiver, he was without such authority, and the jurisdiction of the courts over National banks in voluntary liquidation remained as complete as it was over the ordinary insolvent corporation.

The argument that, although a court of equity might have had the authority to appoint a Receiver to liquidate the debts of this bank, yet it had no power to enforce the liability of the shareholders, is not persuasive. In the first place, under the act of 1864 there was no other way to collect the amounts owing by the shareholders of a bank in voluntary liquidation save by the decree of a court of equity, and where there is, as in such a case, a clear right, and no other adequate remedy, the cases are rare in which a court of equity will not afford one. In the second place, conceding that this liability was not to the bank, and that it could not be collected or enforced by the debtor, still it was as much a trust fund, or the pledge of a trust fund, for the benefit of the creditors, as any of the tangible property of the corporation, and the enforcement of this liability and the distribution of its proceeds is as much a part of the liquidation of the debts of the bank as the collection and distribution of the proceeds of its bills receivable, or any other of its assets.

Hence the conclusion is that, because there was no other adequate remedy to enforce the liability of shareholders of an insolvent National bank in voluntary liquidation under the act of 1864, and because that liability was a trust fund, or the pledge of a trust fund for the benefit of the creditors of

the bank, a court of equity had plenary power to appoint a Receiver, and to authorize him to enforce that liability by action at law. (*Richmond vs. Irons*, 121 U. S. 27, 44, 48, 50; *Irons vs. Bank*, Fed. Cas. No. 7,068; *Irons vs. Bank* [C. C.] 17 Fed. 312, 313; *Wright vs. Bank*, Fed. Cas. No. 18,084; *Elwood vs. Bank*, 41 Kan. 475; *Harvey vs. Lord* [C. C.] 10 Fed. 238, 239; *Wilson vs. Book* [Wash.] 43 Pac. 939, 940; *Farmers' Loan and Trust Co. vs. Funk* [Neb.] 68 N. W. 520, 522, 524; *Hayden vs. Thompson*, 71 Fed. 60, 66, 17 C. C. A. 592, 598.)

The acts of Congress and the rights and remedies of creditors and shareholders of National banks in voluntary liquidation stood in this way from 1864 until Congress passed "An act authorizing the appointment of Receivers of National banks and for other purposes," which was approved on June 30, 1876, c. 156, 19 Stat. 63 [U. S. Comp. St. 1901, p. 3509.] This act was not, and it did not purport to be, an amendment of the act of 1864. It was an independent law, giving remedies not provided by the prior act. Section 1 empowered the Comptroller of the Currency to appoint a Receiver to close up a National bank and to enforce the personal liability of the shareholders (1) where such a bank was dissolved under section 5239 [U. S. Comp. St. 1901, p. 3515], (2) where a creditor had obtained a judgment against it which had remained unpaid for thirty days, and (3) where a bank had become insolvent. Section 2 authorized any creditor of such a banking association in voluntary liquidation to enforce the liability of its shareholders by a bill in equity brought on behalf of himself and all other creditors of the association against the shareholders in any court of the United States which had general jurisdiction in equity in the district in which the association had been located or established.

It is upon this second section, and upon the fact that the suit in equity in which this Receiver was appointed was not a proceeding under that section, that counsel relies to defeat this action. But how can this section curtail or affect the undoubted jurisdiction which the Federal courts had when it was enacted to enforce by the hands of their Receivers the liability of shareholders of banks in voluntary liquidation through suits in equity for a judicial administration of their affairs? It does not in terms withdraw or limit the power of courts of equity. It is not inconsistent with the existence or the exercise of that power. It simply extends to every creditor a remedy which creditors who were citizens of States other than that of the location of the bank had before it was enacted. It does not present a case in which the remedy is given in the same act which creates the right, so that it is rendered exclusive by that fact, as in *Pollard vs. Bailey*, 20 Wall. 527, and *National Bank vs. Francklyn*, 120 U. S. 756. On the other hand, it falls under the converse of this principle. It falls under the familiar rule that, where a statute simply gives a new remedy in a case in which the right and an appropriate remedy existed before its enactment, it is cumulative, and not exclusive, and the party injured is at liberty to pursue either remedy. (*Sedgwick on Construction of Statutory and Constitutional Law* [2d ed.] pp. 342, 340-4; *Wright vs. Bank*, Fed. Cas. No. 18,084; *Clements vs. Bowes*, 17 Sim. 167, 175.)

In the case last cited there was a demurrer to a bill brought by a shareholder of a railway company on behalf of himself and others, in which he prayed for an account of the receipts and payments of the defendants on behalf of the company. This demurrer rested on the ground that the Legis-

lature had provided a different method of winding up and dealing with the affairs of a railway company. But the Court said:

"To oust the jurisdiction of the court of chancery in such a case, the Legislature should have so declared it. It is plain, where the court of equity has jurisdiction in such a case, an act giving further relief does not by that oust the title of the court of equity, without express terms being used to put an end to the jurisdiction which is inherent in the court."

This rule is familiar, and needs no citation of authorities to sustain it. It has been repeatedly applied to the very act under consideration, and both reason and authority persuade that the remedy which the act of 1876 gave was cumulative, not exclusive, and that the jurisdiction and power remained after as before its passage in the Federal courts to appoint Receivers of National banks in voluntary liquidation in proper cases, and to empower these Receivers to enforce by actions at law the liability of the stockholders. (*Harvey vs. Lord* [C. C.] 10 Fed. 236, 238; *Irons vs. Bank* [C. C.] 17 Fed. 308, 312, 313; *Richmond vs. Irons*, 121 U. S. 27, 44, 48, 50.)

DEPOSITS—WHERE TAXABLE.

United States Circuit Court of Appeals, Fourth Circuit, May 5, 1903.

PLYLE, SHERIFF, vs. BRENNEMAN.

A deposit in bank, being a debt due from the bank to the depositor, has its situs at the place of his domicile, and is taxable there.

This was a bill in equity by Louis A. Brenneman, against Stephen G. Pyle, sheriff of Tyler county, W. Va., to restrain the collection of certain taxes assessed against Brenneman by the authorities of said county, and which were sought to be collected by the sheriff. For the year beginning April 1, 1900, Brenneman was arbitrarily assessed upon the personal property books of Tyler county, for taxes upon the sum of \$250,000, alleged to be on deposit to his credit in the Farmers and Producers' National Bank and the First National Bank of Sistersville, both in the town of Sistersville, W. Va., he being at the time a resident of the State of Pennsylvania.

Before Goff, Circuit Judge, and Purnell and Boyd, District Judges.

BOYD, *District Judge* (omitting part of the opinion): Is it tangible personal property, of concrete form, such as to be taxable wherever found, or is it a credit—a debt due by the banks to the depositor—which has its situs at the domicile of the creditor?

A deposit in bank to the credit of the depositor, and subject to his check, is not a bailment. It is a loan. The depositor does not retain the property in any particular funds, but the money which he deposits goes into the funds of the bank. The bank owes him the amount, and the relation of debtor and creditor is created by the transaction. (*Morse on Banks and Banking*, Vol. 1, § 289; *Am. and Eng. Enc. Law*, Vol. 2, p. 93.) This is the law as it is declared by both the Federal and State courts in this country, and in obedience to it we hold that the deposits of Brenneman in the banks of Sistersville are debts due him by the banks, and that the situs of the property is the domicile of the creditor. "It is undoubtedly true that the actual situs of personal property which has a visible and tangible existence, and not the domicile of its owner, will in many cases determine the State in which it may

be taxed. * * * But other personal property, consisting of mortgages and debts generally, has no situs independent of the domicile of the owner." * * * (Case of the Taxation of Foreign-Held Bonds, 15 Wall. 300, 21 L. Ed. 179.) "The general rule is that debts follow the person of the creditor, and are to be taxed at his domicile." (Am. and Eng. Enc. Law. Vol. 25, p. 146.) "A non-resident creditor of a State cannot be said to be, in virtue of a debt which a resident owes him, owner of property within its limits. The credit is not within the State's jurisdiction, and no value to the debtor, and is not property within the State, but property of the creditor, taxable at his place of residence." (Liverpool and London and Globe Insurance Co. vs. Board of Assessors [La.] 11 South. 91, 16 L. R. A. 56.) "For the purposes of taxation a debt has its situs at the residence of the creditor, and may be taxed there." (Kirtland vs. Hotchkiss, 100 U. S. 491.) "Debts are not property. A non-resident creditor of a city cannot be said to be, by virtue of a debt which it owes him, a holder of property within its limits." (Murray vs. Charleston, 96 U. S. 432, 24 L. Ed. 760.)

DISCHARGE OF MAKER—EFFECT UPON INDORSER.

Court of Appeals of New York, March 24, 1903.

AELIA L. SPIES, AS EXECUTRIX OF FRANCIS SPIES vs. NATIONAL CITY BANK.

The holder of a promissory note who so deals with the maker that he becomes discharged from all liability thereon as against subsequent indorsers, cannot enforce the contract of indorsement.

In and prior to April, 1893, Francis Spies, the plaintiff's testator, was doing business in the city of New York in the name of Marcial & Co. At his request in April, 1893, at New York city, the defendant discounted for him a note for \$4,786.62 made in New Orleans by R. M. Ong to the order of Marcial & Co., dated April 11, 1893, and payable in four months thereafter. Spies indorsed the note in the name of Marcial & Co. to the defendant. At that time the defendant held certain railroad bonds which Spies had deposited with it as security for the indebtedness then due to it from him and as security also for "any other note or claim" the defendant might have against him. The defendant discounted the above-mentioned note, relying upon the said securities. The note was not paid when due and was duly protested and due notice was given to the plaintiff. Spies, the indorser, having in the meantime died. In February, 1894, this defendant recovered judgment upon the note against Ong, the maker, in the Civil District Court for the Parish of Orleans, in Louisiana, where Ong resided. A few months later the defendant sold and transferred the said judgment to Alfred Hiller for fifty per cent. of its face value. An order of subrogation was entered in the action in which the said judgment had been recovered, which declared that Hiller "be subrogated to all the plaintiff's rights, claims and demands in and to the judgment therein against the defendant R. M. Ong." In this transaction, all of which took place in Louisiana, Hiller represented Ong, and acted in his behalf and for his benefit, and Ong became the owner of the judgment. When this defendant sold and assigned the said judgment to Hiller it was with an express reservation of all the defendant's rights and claims against the indorsers of the note, to which reservation both Hiller and Ong assented.

PARKER, C. J. (omitting part of the opinion): Turning to the findings, we find it stated that by the law of Louisiana the effect of the said transaction between this defendant and Hiller and Ong was to relieve Ong from all liability upon the note as maker. The plaintiff's remedy as against the maker has, therefore, been swept away by the affirmative action of this defendant, and, hence, under the general rule of law that obtains in such case in this State, the defendant must be deemed to have lost the right that it once had to collect the note or any part of it from the plaintiff.

The learned counsel for the appellant insists that even if it be true that the legal effect of the assignment of the judgment and the entry of the order of subrogation operated to discharge the maker from all liability on the note, nevertheless the effect of the holder's reservation of his rights against the indorser permits recovery from him on the note under the law of this State which governs, as we have seen, the contract of indorsement.

The legal effect of such a contention necessarily is, that there exists in this State an exception to the general rule, that a holder who so acts as to discharge a maker from all liability on a note releases all subsequent indorsers from liability thereon, and is to be found in a case where, at the time of releasing the maker, the holder expressly reserves all rights against the indorsers.

If his contention be well founded the exception would so operate as to destroy in a large measure the value of the general rule, which is well grounded in reason as well as authority, for in many cases the holder could deprive the indorser of his remedy over against the maker and still pursue the holder's remedy against the indorser by a simple agreement with the maker that the holder's rights against the indorser should be reserved.

He cites in support of his position the following cases in this court: *Morgan vs. Smith*, 70 N. Y. 537; *Calvo vs. Davies*, 73 N. Y. 211; *Palmer vs. Purdy*, 83 N. Y. 144.

In *Morgan vs. Smith* no such question was involved. The defendants were co sureties upon a lease, and after the lessees had taken possession under the lease they entered into an agreement with the lessor that the latter should rent the premises for them at their risk, crediting to them any receipts for rent, with a condition that the agreement should not impair or alter the relations of the parties, the covenants of the lease, or the security for the rent. It was held that the agreement, even without the condition, was no more in effect than a consent that the lessee might underlet and that under the condition the rights of the sureties were in no wise affected. The court concluded the opinion in these words: "The delivery and reception of the key was not a surrender or taking possession of the premises, but an intrusting to the plaintiff of the control of them for the purpose of letting them in behalf of the lessees, they all the while remaining tenants and liable for the rent according to the terms of the lease. We do not think this point can be sustained."

Calvo vs. Davies was an action to enforce a mortgage upon premises subsequently sold to a grantee, who in his deed assumed its payment and later entered into an agreement with the mortgagee to extend the time of payment without the consent of his grantor. Held, that the effect of the agreement was to discharge the grantor and mortgagor from liability for the mortgage debt.

In *Palmer vs. Purdy*, of the four tenants, all liable for rent to the plaintiff, two left the firm after having made an agreement with the other two

that they should assume the payment of rent thereafter to accrue, but the fact of this agreement was not fairly communicated to the landlord, so this court held that he was not called upon to treat the outgoing members as sureties, but could legally deal with them all as principal debtors. So the defense that by the acceptance of the notes of the two members continuing in possession of the premises the landlord had extended the time of payment of the rent, was brushed aside, and then the court added, further, that even if it accorded to them the rights of sureties, the defendant's acceptance of the notes, upon an express reservation of his rights and remedies as against them, prevented it from operating as an absolute, and made it only a "qualified and conditional suspension of the right of action; * * * it is to be treated in effect as if it was made in express terms subject to the consent of the surety, and the surety is not thereby discharged."

That rule has never been applied to an indorser on a promissory note by this court, and never can be, when as in this case, there is to be found in the facts and circumstances surrounding the transaction no opportunity to treat the release of the maker as having been made subject to the consent of the indorser.

The judgment should be affirmed, with costs.

Gray, O'Brien, Bartlett, Haight, Vann and Cullen, JJ., concur.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B.; Barrister, Toronto.]

PARTNERSHIP—POWERS OF PARTNER AFTER THE DISSOLUTION OF FIRM—HYPOTHECATION OF LUMBER TO SECURE ADVANCES—BANK ACT, SECTIONS 74, 75 AND 78—SALE OF LUMBER BY PARTNER—APPLICATION OF PROCEEDS TO PAYMENT OF INDEBTEDNESS NOT SECURED BY HYPOTHECATION—KNOWLEDGE BY PLEDGEE.

HALE vs. THE PEOPLE'S BANK OF HALIFAX (2 New Brunswick Equity Reports, p. 433).

STATEMENT OF FACTS: This was a bill for an injunction to restrain the defendants, the bank, and John G. Murchie from selling or disposing of certain timber licenses and for an accounting to the plaintiff by the bank, George A. Murchie and the firm of James Murchie and Sons. The facts appear fully in the judgment of the court.

JUDGMENT (BARKER, J.): In 1899 the plaintiff and the defendant George A. Murchie by a verbal agreement entered into partnership for the purpose of carrying on a milling and lumbering business under the name of Hale & Murchie. George A. Murchie was then and has been ever since a member of the firm of J. Murchie and Sons. Up to the fall of 1900 the plaintiff seems to have had the active management of the business and in order to carry it on, his firm, acting by him, had borrowed from the defendant bank such sums of money as were required from time to time for their lumbering business. These advances so made each year were secured by an hypothecation under the Bank Act of the lumber cut during that season, and in the fall of 1900 the firm of Hale & Murchie was indebted to the bank in the sum of upwards of \$75,000, for which had been given as security a large quantity of lumber under contract of sale to Dobell & Co., of Quebec, and ready for delivery, the price of which was in round numbers \$50,000. For some reason

not disclosed in the evidence the bank, on being applied to by the plaintiff in the fall of 1900 to make the usual advances for the coming season's operations through its agent at Woodstock, declined to do so, whereupon the plaintiff's partner, George A. Murchie, on behalf of the firm and with the plaintiff's full concurrence, went to the head office of the bank at Halifax in order, if possible, to make some arrangement, and the result of his application there was that the bank agreed to advance the firm for the operations of 1900-1901 up to \$91,000 upon the terms contained in the following letter from the General Manager of the bank:

HALIFAX, N. S., December 20, 1900.

George A. Murchie, Esq., Calais, Me.

DEAR SIR: The board of directors have considered the proposal made by you at your interview this morning and have decided to make advances to the firm of Hale & Murchie for the present season extending to July 1 next, upon the following terms: The amount of lumber to be cut is to be limited to thirteen million feet, and we will make advances at the rate of \$7 per thousand feet (\$5 for logging, \$1 for driving and \$1 for browsing), you to provide the money for the stumpage. As security for these advances we will require: (1) a lien upon all the logs cut under the terms provided by our Bank Act and in accordance with usage; (2) an assignment to the bank of all timber leases held by the firm of Hale & Murchie on the Tobique and elsewhere; (3) a personal guarantee bond to be given by yourself and John G. Murchie covering the full amount of all advances made by the bank from this date to Messrs. Hale & Murchie. All these conditions must be fully complied with before any advances can be made. In addition we wish it to be understood that no indirect liabilities will be created in the shape of jobbers' time drafts and that obligations created at the bank will have prompt personal attention. We wish it to be understood that the firm of Hale & Murchie is domiciled at Fredericton and that the books and papers of the firm will be properly kept at that place and accessible to the bank for the purposes of information at any time, and that no office or branch office will be permitted at any other place. In reference to present indebtedness of the firm to the bank, we accept the figures of your specification showing that under your contract with Dobell & Co. \$50,578.89 worth of lumber is ready for the latter firm's acceptance, and according to Dobell & Co.'s contract that this will be settled for by note due not later than February 4. We accept your assurance that either Mr. Hale or yourself will visit Quebec at a very early date to bring about this settlement. The balance of the debt we are willing to carry along, provided that at least one-half is repaid within a year, and your assurance on this point is sufficient for the directors. We require that the affairs of the firm generally will be closely supervised by you and that the financial part will have your particular personal attention. When you are in a position to transfer and complete the securities mentioned in this letter, I will acquaint our Manager at Woodstock with the particulars and will then have the funds made available to your firm. Should any further explanation be required I shall be pleased to furnish same. Any correspondence necessary to the completion of the understanding should be had with this office. After the account is once opened in accordance with the terms agreed upon, the matter will be in the hands of Mr. White, our Manager at Woodstock.

Wishing you the compliments of the season, I remain,

Yours faithfully,

D. R. CLARKE, *Cashier.*

It is not denied that this letter was shown to the plaintiff or that with a full knowledge of its terms he accepted them. A change was made at the instance of John G. Murchie which was accepted by all parties; namely, that the licenses instead of being assigned by Hale & Murchie direct to the bank as a security for the advances, were to be assigned to him as security against loss on his guarantee bond, and the bank also agreed to extend the limit of the advance to \$94,000. The plaintiff does not dispute the terms of this agreement; in fact he complained then and still complains of the stipulation that his partner was to assume the supervision of the financial affairs

of the firm, which up to that time he had managed, and he subsequently made it a distinct ground of dissolving the partnership that his partner had, in violation of the terms of this letter, removed the books and papers of the firm from Fredericton to Calais. In accordance with the arrangement the plaintiff and his partner, George A. Murchie, professing to act as the firm of Hale & Murchie, and John G. Murchie entered into an agreement dated January 14, 1901, by which Hale & Murchie assigned to John G. Murchie a number of timber licenses covering an area of some 300 square miles and their interest in some other timber limits as security against loss on his guarantee to the bank for these advances and any other liability to the bank which he might assume for them.

By the above-mentioned agreement it was expressly stipulated "that upon payment by said firm to said John G. Murchie of and for all amounts or sums assumed or guaranteed by him for said firm as aforesaid, or upon due and proper discharges, acquittances or releases thereof being obtained, then and thereupon the said John G. Murchie is to reassign at once the said licenses and timber lands to the said Frederick H. Hale and George A. Murchie."

John G. Murchie gave the bond to the bank as he had agreed, and as a security for its performance he assigned the Hale & Murchie timber licenses and limits, assigned to him, over to the bank. The bank made the advances up to \$94,000. Hale & Murchie got out some thirteen millions of lumber, all of which was hypothecated to the bank, and all of which has been manufactured and disposed of. During the year 1901 Hale & Murchie paid to the bank on account of these advances, \$30,000, so that irrespective of interest and one or two small sums which are to go in reduction of the amount, the balance according to the bank's contention due by Hale & Murchie, on account of the moneys so advanced, is \$64,000, for which they hold, or at all events did hold, the lumber hypothecated, the timber licenses and John G. Murchie's guarantee as security, in addition to Hale & Murchie's personal obligation. So far there is no substantial difference between the parties. The plaintiff, however, says that this balance of \$64,000 is subject to a deduction of two sums; one an ascertained amount of \$27,745.23, and the other of an amount to be ascertained by an account asked for in this suit, and his contention is that these two sums would pay off the bank in full, or at all events that he was ready to pay any balance which might remain due, thus relieving John G. Murchie from liability on his guarantee, and the timber licenses and other securities held by the bank would then be assignable to Hale & Murchie by the terms of the assignment to John G. Murchie.

Taking these two contentions in their order, the facts of the first claim of the plaintiff are as follows: On February 6, 1901, a payment of \$50,000 was made by Hale & Murchie to the bank on account, which left a balance of \$27,745.23.

The \$50,000 is the amount due by Dobell, Beckett & Co., mentioned by Mr. Clarke, in his letter to George A. Murchie of December 20, 1900, in which he urges either Hale or Murchie to go to Quebec in order to have it arranged. The balance was carried along by way of renewals until January, 1902, at which time it was represented by Hale & Murchie's promissory note, held by the bank, dated August 5, 1901, and maturing February 8, 1902. On January 7, 1902, that is, a month before this note fell due, George A. Murchie, acting on behalf of the firm of Hale & Murchie, paid the bank \$23,171.30,

and on the following day (January 8, 1902) a further sum of \$3,987.50, both of which sums were paid on account of the balance of \$27,745.23, and were so credited by the bank on the note held by them. This appropriation of these two payments was made by the consent and agreement of George A. Murchie, acting for himself and partner, of the bank's Manager and of John G. Murchie, the guarantor. The \$23,171.30 was received from Dobell, Beckett & Co., in payment of lumber sold them by Hale & Murchie from the cut of 1900-1901, and the \$3,987.50 was the proceeds of a draft drawn by Hale & Murchie by George A. Murchie, on J. Murchie & Sons, in favor of the bank. These payments were appropriated in the way I have mentioned without the plaintiff's knowledge in any way, and, as I think from the evidence, with a knowledge on the part of the bank that the money from Dobell, Beckett & Co. was the proceeds of lumber hypothecated to the bank of the 1900-1901 cut, and the plaintiff's contention, as to both of these claims, is that as the lumber got out that season was hypothecated to secure the advances for that season, it was a fraud upon him, or rather upon the unsecured creditors of Hale & Murchie to utilize the moneys derived from its sale in payment of an indebtedness of another year altogether, and thus throw an additional burden on the securities. The bank, being unable to obtain payment of its indebtedness, and the original security upon the lumber having been exhausted by the manufacture and the sale of the logs by Hale & Murchie, was proceeding to realize upon the timber licenses, when this bill was filed, upon which Mr. Justice McLeod granted an interim injunction staying the sale. The licenses have since been sold, by consent of all parties, at auction, and the proceeds—some \$72,000—have been paid into court, to be dealt with as representing the licenses. The bill also alleges that the thirteen millions, if sold at the market price, would realize \$140,000—much more than sufficient to pay the bank in full. The charge in the bill against George A. Murchie is that he sold a large portion of the lumber to Dobell, Beckett & Co., and did not, as he was bound to do, use the proceeds in reduction of the secured debt, and that he shipped large quantities of the lumber to J. Murchie & Sons, who have not accounted for it. The charge which the plaintiff makes against the bank is not only that it illegally and wrongfully credited the payments on the old note, as I have mentioned, but that, in violation of its duty and in fraud of the plaintiff, permitted George A. Murchie and J. Murchie & Sons to receive large portions of the lumber and the proceeds thereof, instead of having the same applied in payment of the advances. The bill further alleges that the plaintiff was ready and willing to pay the bank the amount really due it, for which the licenses were held as a security, and that it would be a great wrong, not only to him, but the unsecured creditors of Hale & Murchie, if the licenses were sold before the real indebtedness to the bank, for which they were held as a security, was ascertained.

There is no evidence whatever of any attempt by the bank to exclude the plaintiff from the business management of his firm, even if it were in a position to do so, of which there is no evidence whatever. Neither can I find in the evidence anything to suggest that the transactions between the firm and the bank were in any way concealed from the plaintiff, or that either by inquiry of the bank or of George A. Murchie or by an inspection of the books of his firm, he could not have obtained full information in reference to them. As to the appropriation of the \$27,000, there is no dispute that the debt was

owing by Hale & Murchie to the bank, and that it was the balance of the \$75,000 indebtedness existing from the 1899 transaction spoken of by Mr. Clarke in his letter. George A. Murchie and the bank justify this payment on two grounds. In the first place it was simply carrying out the terms of the letter to which the plaintiff himself assented; and in the second place it was competent for Murchie to bind his partner by the payment, even without any express authority.

In determining this question, it is, I think, immaterial whether the partnership had been dissolved or not, for in either case the authority to wind up its affairs and deal with its property remained in the partners, this court not having at that time intervened by the appointment of a Receiver.

In *Butchart vs. Dresser* (affirmed on appeal) it is virtually laid down that, notwithstanding a dissolution, a partner, until at all events a Receiver is appointed, has all the power and authority he had before the dissolution to complete contracts previously made, and in order to wind up the business. In this case, on appeal, Turner, L.J., says: "The general law is clear, that a partnership, though dissolved, continues for the purpose of winding up its affairs. Each partner has, after, and notwithstanding the dissolution, full authority to receive and pay money on account of the partnership, and has the same authority to deal with the property of the partnership for partnership purposes, as he had during the continuance of the partnership. This must necessarily be so. If it were not, at the instant of dissolution, it would be necessary to apply to this court for a Receiver in every case although the partners did not differ on any one item of the account."

It is true that Hale & Murchie had a right to compel the bank to utilize the proceeds of the lumber in payment of the debt which it was pledged to secure; but that is a right which the parties interested may waive, and, in my opinion, had the partnership been existing, it would have been quite competent for George A. Murchie to do precisely what he did, quite apart from his assurance to the bank, and that he would have the same power after a dissolution, and before this court had taken charge of the assets by way of appointing a Receiver. I confess, as a practical business matter, I cannot see from the standpoint of the plaintiff the force of his objection. There is no dispute as to the debt being due, and its payment enured to the benefit of both partners alike, and neither can get anything out of the partnership assets until all the debts are paid in full. Apart from this, the plaintiff knew that his firm was under the assurance given by George A. Murchie, and adopted by himself, that during the year 1901, at least one-half of this old balance would be paid, and when this payment was made the year had passed and nothing had been paid. I do not at all think it was in the contemplation of the plaintiff or any one else that this balance was to be paid from funds other than those received from the sale of those logs cut in the season of 1900 and 1901.

The evidence and all the circumstances point to an entirely different conclusion. Where was the money to come from if not from that source? It must be remembered that if, as the plaintiff affirms, these thirteen millions of lumber at current rates were worth \$140,000, and the evidence rather sustains that estimate, there was a margin of nearly \$50,000 over and above the bank's claim, which belonged to the firm. Whoever supposed that not a dollar of that sum was to be used until the bank had been paid off? I think the

plaintiff has no ground and no reason for complaining of this payment or of its appropriation.

Coming now to the plaintiff's second contention, it would seem at first blush that this case is the simple one of a bill filed by the pledgor of two distinct separate kinds of property seeking to secure the same debt, to restrain the pledgee from realizing or selling one kind or part of the whole property pledged, on the ground that from the remainder of it he had already realized, or ought to have realized, sufficient to discharge the indebtedness. The bill is in form a redemption bill. There is nothing in it, however, alleging any partnership between the two firms. That is involved in the other suit pending, and if the evidence sustains the plaintiff's view of this point, the whole account can be taken and must be taken in that suit. The bank has no interest in the taking of a mere partnership account between these two firms. It is only because it is alleged here that the bank has wrongfully, and in fraud of the plaintiff, permitted J. Murchie & Sons to get this property, and for which they must account to the plaintiff, that any account can be asked here, because that is the only accounting by J. Murchie & Sons in which the bank has any interest. Neither has the bank any interest in a mere accounting between the members of the firm of Hale & Murchie *inter se*. It is only because of the allegation as to George A. Murchie's management of the firm's business for the benefit of the bank that any accounting can be claimed in this suit involving that question.

The facts in evidence, I think, show that this is not the ordinary case of mortgagor and mortgagee of chattels, which I have mentioned. It appears that from the formation of the plaintiff's firm in 1889 down to the last transaction in 1900, Hale & Murchie had carried on their financial matters principally with the defendant bank. The bank had from year to year made them advances which they required for their lumbering operations, taking security as a lien on the lumber under the Bank Act. During all that time the plaintiff had the principal arrangement of the firm's business, and practically the entire management of its money matters. The disposal of the lumber and the management of the business were left entirely with Hale & Murchie, which, during that period, practically meant the plaintiff. They took charge of the property, manufactured it, sold it, and dealt with it in every way—so far as I can gather from the evidence—so far as the outside world was concerned, as if they alone were interested in it. No doubt the bank was consulted from time to time and kept informed of the business matters and how they were likely to result, but they made no contracts of sale, shipped and sold apparently to whom they chose, and collected all the proceeds. It was Mr. Hale or Mr. George A. Murchie, not any bank official, who by the terms of Mr. Clarke's letter of December 20, was to go to Quebec to secure and arrange the payment by Dobell, Beckett & Co., of the \$50,000 due by them, though the money really belonged to the bank, and it represented lumber pledged to the bank and sold by the pledgors by their consent. The bank put forward that this is the only practical way of handling a security of this kind. That may be so. At all events that is the method by which Hale & Murchie and the bank dealt with them for all these years. After George A. Murchie took charge in 1900, precisely the same course of dealing was adopted. As in previous years Hale & Murchie sold the lumber and should have accounted to the bank for the proceeds.

In the one case the plaintiff was the active partner while in the other George A. Murchie was the active partner. During all these years Hale & Murchie sold largely to J. Murchie & Sons. Their accounts between the two firms as kept by them up to 1900 show a yearly increasing balance against Hale & Murchie, and in January, 1902, this balance was slightly over \$100,000. It is true that the plaintiff entirely denies the correctness of these figures and states his belief that on a proper accounting the whole indebtedness would disappear. But even in that case the fact would still remain that the cash payments and advances by J. Murchie & Sons to Hale & Murchie were at least equal to the value of the timber shipped to them.

Now, in all this where consists the fraud of which the plaintiff complains? Were he and the bank for ten years prior to 1901 dealing fraudulently as to George A. Murchie? If not, George A. Murchie and the bank were not dealing fraudulently with him in 1901. Upon what principle, then, can the plaintiff be heard to say to the bank, you can not go on realizing your securities, because if you credit what, but for your default or neglect, you would have received, your debt would have been paid in full? The default or neglect was that of the plaintiff and his partner. They were under an obligation to pay the proceeds of the sales of this lumber to the bank until it was paid in full. Instead of doing that they used them in paying another creditor. As between these parties Hale & Murchie cannot complain if the bank realizes on its securities, and if there is a dispute between J. Murchie & Sons and the plaintiff, or between the plaintiff and his partner, the parties can settle it among themselves.

The bank has no interest in these accounts unless its claim against Hale & Murchie, which it is seeking to realize from the securities, would be affected by the result; which, in my opinion, would not be the case. I can see no reason whatever why the bank, holding the securities on the lumber and on the licenses for the one debt should be debarred from realizing on the licenses because a portion of the other security had been received by the plaintiff and his partner. The bank could surely, at its own instance, relinquish a part of its security and if there was any fraud, or the bank did not relinquish, the plaintiff and his firm, having the benefit of the money, cannot complain.

The plaintiff's bill must be dismissed with costs and out of the fund in court the bank must be paid the amount due it for its advances; and it will be so ordered.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in banking law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

Editor Bankers' Magazine:

MILLER, S. D., Aug. 24, 1903.

SIR: Can the paying bank recover from indorsers on a forged check after it has accepted and paid the check?

CASHIER.

Answer.—The general rule is that a bank is bound to know the signature of its depositors, and where it has paid a check it cannot be heard to say that the drawer's signature is a forgery. But this rule applies only in cases

where there has been no fault on the part of the person to whom payment has been made. In *First National Bank of Danvers vs. First National Bank of Salem*, 151 Mass. 280, the rule was stated thus: "To entitle the holder to retain money obtained by forgery, he should be able to maintain that the whole responsibility of determining the validity of the signature was placed upon the drawee and that the vigilance of the drawee was not lessened, and that he was not lulled into a false security by any disregard of duty on his own part, or by the failure of any precautions which from his implied assertion in presenting the check as a sufficient voucher, the drawee had a right to believe he had taken." And in *Deposit Bank of Georgetown vs. Fayette National Bank*, 90 Ky. 10, it was said: "Notwithstanding some conflict of authority upon the subject, a careful investigation of the adjudged cases and the text books leads us to the conclusion that the bank can recover of a party to whom payment is made on a forged check, indorsed by the party to whom paid, where the party to whom paid has been guilty of negligence in receiving and indorsing the check; for, notwithstanding the negligence to some degree that the paying bank has been guilty of in paying the forged check without detecting the forgery of its depositor's signature, it often happens, or may happen, that the party to whom payment is made has been guilty of the first negligence in purchasing and endorsing the forged paper." The question of liability and of the right of the drawee bank to recover, must depend, therefore, upon the circumstances of each particular case. (See also *People's Bank vs. Franklin Bank*, 88 Tenn. 299; *First National Bank of Crawfordsville vs. Indiana National Bank*, 4 Ind. App. 355; *National Bank of North America vs. Bangs*, 106 Mass. 441; *Ellis vs. Insurance Company*, 4 Ohio St. 628; *First National Bank vs. Ricker*, 71 Ill. 439; *Rouvant vs. San Antonio National Bank*, 63 Tex. 610.)

NEW MODEL UNIVERSAL ADDING MACHINE.—In these days of large business, bank officers are eagerly seeking for practicable means of saving time and labor and at the same time securing perfect accuracy. The slow and laborious method of adding long columns of figures and the great liability to error, made the adding machine a necessity and a welcome addition to the labor-saving devices employed in all well-conducted banks.

The New Model Universal Adding Machine possesses several special advantages. It accommodates paper up to 17 inches, prints from one to 14 columns and shows the totals printed in red ink, the totals being carried from the bottom of one column to the top of the next in red ink; sub-totals may be found at any point desired in red ink, and the grand total is visible at all times. The last item is visible to the operator as in a typewriter. Three good carbon copies can be made. The speed of the machine is limited only by the capacity of the operator. The New Model Universal Adding Machine is manufactured and sold by the Universal Accountant Machine Co., St. Louis, Mo.

THE BEST OF ITS KIND.—THE BANKERS' MAGAZINE, of New York, is in our opinion the leading journal of its kind in the world. We wish it a long continuance of the success that has so emphatically marked its career. There is a great field for it, and we have no doubt that its labors will be abundantly fruitful.—*The Review, Sydney, Australia.*

* THE PRACTICAL WORK OF A BANK.

EMBEZZLEMENTS AND DEFALCATIONS.

I.

Thievery antedates any system designed to protect property or to apprehend the thief, and these systems have been brought to their present state of perfection largely through his ability in manipulating devices and skill in foiling detection. Checks and verifications, in particular, have been enlarged and adjusted each time an embezzlement of novel character has been discovered. Usually, in such cases, extraordinary attention has been given to the checking of the more complex departments of the bank, while the simpler ones have been slighted or overlooked entirely.

Somehow we are too prone to believe that stealing will be done in one of the old ways. Unfortunately, the thief has no respect for formality, and we meet an unpleasant surprise. Check systems, while important, are not, in themselves, the means and the end in guarding the bank's funds. There are other considerations of equal importance. For convenience of discussion, the topics may be designated as follows :

- (1) The selection and employment of clerks.
- (2) The management and discipline of clerks.
- (3) The management of funds and securities.
- (4) Checks and verifications.

THE SELECTION AND EMPLOYMENT OF CLERKS.

Every clerk should be selected on account of his fitness for the position. Unfortunately, this rule is not always followed. In many cases the large stockholders place their sons or other relatives in bank positions, simply because they have the power to do so. No thought is entertained as to whether they have all the qualifications necessary for the place. In fact, it is too often the case that a pull is considered of more importance in getting one into a bank position than ability and fitness. This method of employing clerks has undoubtedly been the cause of many embezzlements.

The character of every candidate should be carefully scrutinized before he is placed in a responsible position. An acquaintance covering a few years is rarely sufficient to judge of the true character of a person. It is better to know his whole life, and whenever possible something of his progenitors. If there is such a thing as kleptomania, the sufferer should have no place in the bank. The power to resist the temptation to steal is too weak in the normal without incurring an extra hazard by employing those inclined to be "light-fingered." Hence, acting on the safe side, the bank should know that the clerk is descended from honest and upright people.

The applicant should have a keen sense of honor. He should be of an economical turn and not given to extravagant habits. Above all, he should be temperate and no gambler. He should have stability of character and be a person not easily swayed by others.

* A series of articles to be published in competition for prizes aggregating \$1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

Having been satisfied that the applicant has ability and the other essential qualifications, it is important to see what influences surround him. If he has been reared in a congenial family, and especially if he has a family of his own, it will be a secure anchor, holding him firmly in the line of duty. Too much importance cannot be attached to temperance. Strong drink is the latch-string that opens the door of dishonor. The drinking habit, when once formed, is an uncontrollable power dragging its victim to the commission of every crime known to criminal nomenclature. When the appetite is inherited, it is occasionally kept in a state of abeyance or suspense, smouldering-like, and by a chance suggestion bursts into fury. The legatee is the obedient tool of an unscrupulous master and nothing is secure in his keeping. For this reason reformed drunkards and gamblers are not safe men. They should not be employed.

THE MANAGEMENT AND DISCIPLINE OF CLERKS.

If the first requisite is to employ clerks on account of fitness, and only those free from vicious tendencies, the second is to see that such tendencies are not developed. Bank clerks are not immune from acquiring vicious habits. The history of defalcations shows that unfavorable associations have developed baneful practices, after persons were placed in responsible positions. The loss of the funds and the ruin of the employee are traceable directly to these associations. Clerks should be given to understand that such associations, if persisted in, are at the peril of instant discharge. Bank clerks occupy a false position in society. The public generally seem to think that because one is employed in a bank he should be equal to any task, regardless of the expense that might be imposed on him in a social way. Many a clerk (and the bank also) has come to grief by vainly trying to maintain a social position entirely out of proportion to his income. If the clerk has to wear better clothes and meet expenses not expected in other vocations, he should at least be entitled to better pay. Liberal salary, within prudent limits, is always legitimate and will promote the interest of both bank and employee.

Every clerk who practices economy and has habits of thrift will have a surplus left of his salary each month over current expenses that he will want to invest. This is important to both bank and employee. A bank clerk is in a position to see many business transactions. Often transactions that record phenomenal margins pass under his observation. Lacking experience and looking only on the bright side, he is tempted to enter such speculations himself. Of course the outcome is easily foretold. Assessments and margins are called. Having over-invested he has no means of protecting himself except by borrowing from friends. This is temporary relief only. Soon other margins and assessments are demanded. The perplexity of the situation is heightened by the clamor of friends for the return of money loaned. What is to be done? He can neither repay friends nor redeem his investments. He is advised that things will change in a very few days. He takes the fatal step and "borrows" from the bank—he will repay and no one will be the wiser—friends are paid and the margins advanced. He nervously awaits the turn of events, but the situation continues to grow worse. Now he is a defaulter. In desperation he makes further "loans" from the bank in efforts to repay the amount already taken. Each investment only adds to his misfortunes. If not detected and cut short, the career usually ends by a gigantic steal and the trusted employee becomes an absconder.

If the bank had given encouragement to investment in legitimate enterprises, there would have been no embezzlement. Some bank officials court a seclusiveness and are possessed with an idea that the bank's stock and the institution's securities are too sacred to serve as investments for the clerks. Moreover, it is beneath his dignity to have the clerk's name among the list of shareholders even nominally. He

seems to lose sight of the fact that the weal or woe of the concern is more or less in the hands of the clerk, and he is brought to a realization of it only after it is too late. Investments by the clerk should not be made mandatory. The opportunity should be presented in such a way that it will be taken as a courtesy and as an accommodation. This will have a beneficial effect in two ways: (1) The clerk's investments will be made in legitimate lines, thus avoiding any hazard by keeping the clerk out of questionable speculations; (2) he will be satisfied with his position and feel that his services are appreciated and that he is regarded as something more than a mere machine.

An important feature in connection with the management of clerks is vacations. Aside from the rest and recreation it gives the employee, it presents an excellent opportunity for making a rotation in the working force. If any crookedness has been practiced, it will easily be discovered by one performing the duties of another.

By discipline is meant that each clerk is charged with the performance of a specific duty and is not allowed to work, even if competent, in any other department, only on special occasions such as sickness or vacation of other employees or when a rotation is made purposely. The responsible positions should be trusted to as few persons as possible, consistent with reasonable dispatch of business.

Means should be provided for the complete identification of work passing through the hands of each clerk. This is accomplished by organizing the bank into separate departments and by a classification of the bank's customers. For example, the departments might be: Cashier's, teller's, collections, exchange and bookkeepers', etc. Each of these may again be subdivided into as many sub-departments as desired, viz.: the Cashier's department into first Assistant Cashier, second Assistant Cashier, etc. The teller's department as paying teller and receiving teller No. 1, 2, 3, etc., in each case. The exchange into foreign exchange and domestic exchange. The bookkeepers as individual and general.

By classification of customers; as mail teller, receiving teller No. 1 A to G., individual bookkeeper A to G., etc.; National bank bookkeeper, State bank bookkeeper, etc.

All work passing through each department can be identified by initialing, or by the use of a small rubber stamp, or in the case of classification of customers, automatically. The receiving teller's departments and bookkeeper's departments are the only ones that can be successfully operated by a classification of the customers without confusion. A combination of both methods is necessary to success.

The receiving teller should be charged with the responsibility of all money coming into the bank. It is from him that all customers take receipts, either in the shape of deposits entered into pass-books or certificates of deposit. It is necessary that the department be conducted in such a way that the teller can be held responsible. The practice of permitting several persons to receive and enter deposits in customers' books is bad. Figures alone cannot always be identified, and it offers a loophole for the dishonest.

Every depositor having a check account should be required to accompany each deposit with a deposit-tag filled out in the handwriting of the person making the deposit. Under no circumstances should the teller be allowed to make deposit-tags. If the teller makes the ticket there is nothing to prevent him from making one for a less amount than the figures entered in the pass-book and he can appropriate the difference. On the other hand, a dishonest depositor can very easily alter the amount entered in the deposit-book by a simple stroke of his pen and contend that the teller has embezzled the difference between the amount shown on the pass-book and the amount credited to his account on the books of the bank. The practice puts the bank in a double peril—internal and external robbery.

It is advisable to have the teller countersign all certificates of deposits and drafts issued under his direction, not as a means to add to the genuineness of the draft, but in the sense that he certifies he has received the funds for which the paper is issued. In no case should drafts or certificates of deposit be signed in advance, in blank, but when the amount is received for which the check is issued, the teller should sign the space designated "countersigned by" and then the Cashier or other officer should sign. In this way each officer is a check on the other.

When transfers are made from one account to another, perhaps through different departments of the bank, or even outside the bank itself, the warrant or memorandum check authorizing the transfer should be filled in with both figures and writing and be signed by the department of its origin. The following is a good form:

Charge National Bank of Commerce, St. Louis, (\$5,000) Five thousand dollars and credit Omaha National Bank, letter May 10, 1908. To the National bank book-keeper. (Signed) J. Blank, Cashier.

This form may be modified to suit transfers outside the bank or to distant points.

THE MANAGEMENT OF FUNDS AND SECURITIES.

In the management of funds and securities such as United States bonds, etc., one and one person only should be charged with the responsibility of their custody in each of these departments.

The teller or Cashier, as the case may be, should have sole charge of the safe together with its combination and contents. Two persons under no circumstances should, at the same time, be in possession of the combination. A copy of the combination should be kept by the person responsible for the funds and another copy, carefully sealed with his private seal, delivered to the President, and this seal should only be broken in case of death or unforeseen events, and then only in the presence of witnesses.

Money should be carefully counted when delivered to persons in whose charge it is to be during the business hours, and again carefully counted when received by the party responsible for its keeping. Departments containing cash should be locked and access given to none except the person in charge. When two or more persons have access and have been in a department containing funds the dishonest can steal and charge the innocent with the crime. Of course the innocent will deny the charge as also will the guilty. It is one of two, but which? Things should never be conducted in such a manner that you cannot tell who the embezzler is.

CHECKS AND VERIFICATIONS.

A system of checks may be treated under two heads. The function of the first would be in proving that the system of accounts (bookkeeping) is mathematically and methodically correct. That is to say, to see that each credit entry is accompanied by cash or has a corresponding charge, and that all footings are correct. The function of the second would be to examine each account and ascertain conclusively that each item of record belongs to the account in which it appears.

The accounts, cash on hand and stocks and bonds, can properly be considered under the first head. If the system of accounts is found correct, a careful count of the cash and securities held by the bank will agree with the balance shown in each case. If there be an embezzlement, simple in its character, without any efforts at concealment by means of false entries, it will be apparent on the completion of the count. Nearly all embezzlements are accompanied by efforts of concealment, and are transferred as a (false) charge to some account. Detection can be had only by verification of accounts by checking each item.

The best mode of verification, of both general and individual accounts, is through the means of monthly or semi-monthly statements, or rendering of accounts by

transcript or by means of pass-books. When statements of all the accounts are made out and ready for the mail, or delivery otherwise, the auditors in charge should make a careful comparison of the balances as shown by the statements of accounts rendered with the balances as shown by the books of the bank, being particular to see that they agree. Then the mailing and delivery are done independently of the office force, and all mail touching the correctness of the work is received in a like manner.

In the case of correspondents acting as reserve agents and others carrying funds on which the bank is allowed interest on daily balances, verification and reconciliation of balances should be made by a careful checking of statements received from such correspondents, due allowance being made for floating drafts and items in transit, to and from the bank.

This method would make a complete verification of all the accounts as often as once a month, or as often as accounts are rendered. The verifications can be made daily by employing a set of voucher clerks. The duties of these would be to write up customers' accounts each day on statement blanks and voucher lists, and call each item back and verify them with the amounts by the bookkeepers, on the ledger. By so doing one set of clerks can keep a complete check on the other in addition to guarding against errors and having the statements always ready for delivery.

Voucher clerks should be charged with the responsibility of the custody of paid and cancelled vouchers. These old checks are important and should be kept so that no one shall have access to them without the knowledge and consent of their custodian. Otherwise dishonest dealers in collusion with dishonest clerks might make trouble.

The system of checks employed in the largest banks is entirely impracticable in the smaller ones. When the volume of business justifies, a corps of auditors can be in constant attendance and two sets of books of original entry used, one containing the business of dates of odd numbers and the other of the dates of even numbers, each set being checked and used again in rotation one day behind the regular business. Each item of entry, both debit and credit, can be verified by a careful checking of remittance and deposit tags, and mail received from correspondents, and acknowledgments of the receipt of all items and remittances sent to correspondents by the bank itself.

The bills discounted should be carefully listed and footed, to prove that the sum total agrees with the balance carried on the books. Likewise a list should be made of the certificates of deposit, the Cashier's checks, certified checks, and dividend checks unpaid and outstanding, noting carefully, in each case, that the sum total agrees with the balance carried on the books under each head.

All examinations made by National bank examiners are conducted with a view of protecting the bank's solvency and apprehending crookedness as short in cash, or securities missing and falsified accounts, and little or no attention is given the profit-earning side of the concern. This, of course, is all that properly concerns the Government, yet in an exceptionally few cases, even in private examinations, is the checking made to extend beyond these lines. Seldom is the investigation made complete enough to verify that each item of profit, either as interest collected on loans and coupons on bonds or exchange and commissions, have all been credited to their respective accounts and that the bank has not been robbed by their misappropriation. The bank suffers equally as much by being robbed, systematically, of individual items of profit, as it would by reason of a defalcation. The only difference is the one wipes out the surplus after it is built up, while the other prevents its being built up. Yet bank officers check against fraud in one and not the other.

To facilitate this checking a complete record should be made of each loan, showing date, amount, time and rate per cent., and gross amount of interest collected.

The record should be sufficiently comprehensive that each item can be checked and the amounts footed and compared with the figures carried to the account, interest and discounts. All interest-earning securities and departments collecting exchange and commissions should be handled the same way as outlined for loans. The records, of course, being slightly varied so as to suit the particular department.

Examinations should be made not only at regular intervals, and be considered a part of the bank's routine, but there should be special examinations, at times unexpected to the employees. Especially is this important in the departments having cash and securities. All counts of cash should be in the presence of the employee in charge of the department and no opportunity given for outside additions, such as putting in checks or even cash not belonging to the department or the bank itself.

In all checking an alert eye should be kept for fictitious or forged paper either as notes in charge of the Cashier or as checks held by the teller. In case of doubt of the genuineness, verification should be made by communication with the purported maker and presentation of the checks.

BONDING EMPLOYEES.

Banks as a rule require employees to give bonds for the faithful performance of duty, and such bonds are usually furnished by a surety company. In the larger cities these companies have secret agents whose business it is to keep a surveillance over the clerk so bonded and are required to report promptly any irregularities, indicating questionable character or speculations on the part of the employee. This knowledge acts as a restraint on the clerk and at the same time the bank is indemnified from possible loss through thefts. This is one of the most effective means of protecting the bank from loss through dishonest employees.

While it is desirable to apprehend dishonesty the instant it is practiced, the primary object of all considerations should be to prevent rather than to detect wrongdoing. Prevention is always better than apprehension. Like the quality of mercy, it is twice blest. It blesses the bank in avoiding a loss incident to an embezzlement, and it blesses the employee by saving him from degradation and ruin.

PETER COOPER.

PROFITABLE BANKING.

Banking, like every other kind of business, is carried on primarily for profit. Although banks may, and often do, perform important services gratuitously, even these should be made to minister indirectly to the earnings of the capital account. Incidental questions, such as taking checks at par, furnishing exchange free, paying interest on balances, etc., should all be handled with the one aim in view—the profit of the bank. There is nothing else that need be considered in dealing with these matters. So far as the bank is concerned no principles are involved. The poorly-managed bank may declare it immoral to pay interest on deposits; but the bank that can pay interest and still handle the funds safely and profitably, knows better. So with exchange and country checks.

Were each bank permitted to make its own rules in these matters, it would tend to show which banks are most capably managed. Every account must show a reasonable profit. That is the one thing to be kept in mind. For if some accounts are profitable while others are not, the bank is taxing its paying business to meet the deficiency of the non-paying accounts. Instead of lopping these latter off altogether, it is an evasion of the real issue to shift the cost of carrying them on to the shoulders of the bank's best customers. In cashing A's out-of-town checks at par there may be a loss, while B's may yield a profit. Why tax B for A's delinquencies? The profit is what the bank desires.

Advertising is being studied by progressive bankers as never before. The most successful banks in the country are advertising in a manner that shows that intelligent consideration is being given to this means of increasing business. Care and judgment are just as necessary in advertising a bank as in loaning its money or credit. Some of the most rapidly growing banks in the country to-day are large advertisers, and they readily acknowledge that their prosperity is largely due to this fact. The non-advertising banks are falling behind in the race already, and in a short time their position will be so far behind as to be lost beyond recovery.

SAN FRANCISCO.

A BRIEF HISTORICAL SKETCH AND REVIEW OF THE CITY'S BANKING, COMMERCIAL AND INDUSTRIAL INTERESTS.

At the last meeting of the American Bankers' Association, at New Orleans, a delegation of California bankers presented an earnest and cordial invitation that the next convention should be held in San Francisco. This invitation was accepted by the executive council last April, and subsequently October 20, 21, 22, and 23 were fixed as the dates for holding the convention in that city.

With one exception the association has never held its sessions so far from the Atlantic seaboard, when the same city was the place of meeting. This was in 1892. Many of those then in attendance from the coast and the more distant parts of the country have since ceased from earth's toils, and have gone to their eternal rest and reward. The delegates to attend the next convention on the Pacific Coast will comprise many new men, some of whom

were not even then in the banking business, and also some who have never before been on the coast. Naturally, these and others who expect to be in attendance at the convention would like to know something of the city and, incidentally, of the State.

MISSION DOLORES,
Established 1776.

HISTORICAL SKETCH OF THE CITY.

More than fifty-seven years ago (on July 9) the American flag was first raised, in what has since been known as Portsmouth Square, by Captain Montgomery of the war sloop Portsmouth, then lying at Yerba Buena. The rising ground on which this event took place was christened after the sloop, while the main street running in front, a few hundred feet to the east, was given the name of the captain who performed the ceremony. A day or two previously the flag had been first hoisted on California soil at Monterey by Commodore Sloat, in connection with a proclamation in which it was announced that "henceforth California will be a portion of the United States." The same proclamation promising protection to the person and property of peaceable citizens.

That was the beginning of the American occupation of what has since been known as San Francisco. Captain Montgomery appointed one of his lieutenants, Washington A. Bartlett, as alcalde for Yerba Buena, to supersede Noe, the Mexican alcalde. Three weeks after the raising of the flag the town was excited by the appearance of a sail vessel coming into the harbor with her decks crowded with people, many of them women and children. At first sight of the vessel Captain Montgomery had the Portsmouth cleared for action, thinking that those on the strange vessel had come prepared for a fight, but the illusion was soon removed. It was the ship Brooklyn from New York with a colony of emigrants, who had set out for Oregon, but dropped into Yerba Buena Bay. The party consisted of 238, all, with

MARKET STREET, LOOKING EAST FROM SPRECKELS BUILDING.

the exception of about a dozen, Mormons, with Samuel Brannan as the leader, with a printing outfit, which was found most useful in striking off official notices, proclamations, blank deeds and alcalde grants, and later in the publication of a weekly paper known as the "California Star."

The name San Francisco was adopted by a decree from the alcalde in January, 1847. Probably the real reason for a change in the name was to head off a rival town that had been created some thirty miles north by a few influential and wealthy people. This was on the north shore of the Carquinez Strait, which had been given the name of Francesca. Alcalde Bartlett and his advisers were aware that while San Francisco Bay was known by many people, few had ever heard of the village of Yerba Buena, or could long remember the name after learning of it. The name of San Francisco would fix the locality in the mind of all, and so the decree was published settling the name of the city for all time. The promoters of the new town up the bay having failed to make Francesca the metropolis of the Pacific Coast, changed the name to Benicia, and the locality still bears that name, and is content with its environment.

SITUATION OF THE CITY, PARKS, ETC.

From the mission village of Yerba Buena in 1846, containing a few score inhabitants, there stands in 1903 the metropolis of San Francisco, with about 400,000 inhabitants, the largest of the younger cities of the United States. In many respects San Francisco is an ideal city. It is the most western of all the American cities, the one receiving the last rays of the sun at the end of the day's run. Beautifully situated, on rising ground, with much level area for business and residence purposes; bounded by the Pacific Ocean on the west, the Golden Gate entrance to the bay on the north, and the finest bay in the world on the east,

stretching to the south for nearly fifty miles. The peninsula varies in width from six miles at its most northerly boundary to twenty miles at the southerly boundary. Good sea breezes generally prevail, though sometimes accompanied with fog. The sanitation is excellent and the death rate light.

In addition to a number of small parks in the thickly-settled portions of the city, San Francisco has two large parks of national reputation. The Golden Gate park, stretching out to the ocean beach, is one of the largest and finest in the country, and is open and visited by large numbers on every day in the year. The Presidio, or National Park, at the entrance to the harbor, is generally conceded to be the most elaborate quarters for the army in the United States, and regiments located there esteem the privilege very highly. The city is most thoroughly traversed with electric and cable cars, and there is a generous transfer system by means of which one can take a long ride for a single fare. Elegant excursion cars are daily run over the most scenic points of the city at a round-trip rate of twenty-five cents, accompanied by a conductor who announces all objects of interest on the route.

The Sutro Park, at the Cliff House overlooking the ocean, is a free park, although not owned by the city, and is a most charming spot from which to watch incoming and outgoing vessels, and strollers on the beach, of which there are large numbers on almost every day in the year. Seal rocks, close into the shore, covered with live seals, are objects of much interest. The Sutro Baths, built right at the edge of the ocean, with tanks filled with the flowing salt water, having different temperatures, furnishing the most unique bathing place to be found in the country, and is visited by hundreds daily. In connection with the establishment is a museum having a large collection of rare curiosities. For a single fare of five cents one can take a car at the ferry and by various routes proceed direct to the Cliff House on the ocean bluff and take in at the end of the route the Sutro Park, Sutro Baths and Seal rocks.

GENERAL CHARACTER OF THE IMPROVEMENTS.

San Francisco improvements are largely wooden structures. This is especially true of the residence districts. It is rare to find a brick or stone residence, though there are quite a number of them in the city, some of which are large and costly. The Flood mansion, on California and Mason streets, built of brown stone brought from the East, is a notable instance of the more substantial private residences. The Claus Spreckels mansion, on Van Ness avenue, built of red brick, with its heavy steep slated roof, has no duplicate here or perhaps this side of Chicago. The large residences on Nob Hill, formerly occupied by the great railway magnates—Stanford, Crocker, Huntington and Hopkins—are all wooden structures. The Hopkins residence, the most artistic of these four, has long been devoted to the uses of the Mark Hopkins School of Fine Arts.

The business blocks of the city are, of course, more substantial. The past ten years has witnessed many desirable changes of this character in the business dis-

CLAUS SPRECKELS BUILDING.

trict. Modern and substantial brick, stone, and iron buildings have risen in many directions. Whole blocks have been rebuilt during this interval. Steel-frame buildings with stone or brick facings are now quite common, and many of this character have been erected, and many more are in process of erection. No one any longer fears damage to such structures from earthquakes, while losses from fire are minimized. Some fine office buildings, with latest modern equipments, have been erected in the past few years. The Hayward Building at California and Montgomery, the Rialto Building at Mission and New Montgomery, where is housed the office of the United Railroads, are two of many that might be mentioned. The Flood Building, in process of erection at Powell and Market on the site formerly occupied by the Baldwin Hotel, is to be an office building of magnificent proportions.

San Francisco is pre-eminently a city of hotels and boarding-houses. There were never so many private hotels and apartment houses in operation as now, and many more are in process of erection. Most of these are of the latest modern type, large and elegantly furnished. Among the larger public hotels, the Palace still takes the lead with the traveling public. The new St. Francis Hotel on Union Square, which will not be finished for some months, will take the leading place among the down town hotels as soon as it can be thrown open to the public. The Fairmount Hotel on California, Sacramento, Mason and Powell, the foundations for which are now being laid, will be the largest structure of the kind in the city, and will command a most sweeping view of the city, the bay, and the counties across the bay, including Mt. Diablo and Mt. Tamalpais. There will be no attempt to outdo that enterprise in this city in the next generation.

COMMERCIAL AND INDUSTRIAL ACTIVITY OF THE POPULATION.

Something else is needed besides a fine site covered with buildings of various sizes and descriptions, and well occupied with people, to make a city great and prosperous. All these things are essential factors in the problem, but there is one thing lacking, and that is the power to make these accessories achieve something. In the well equipped factory or railroad this power is steam. In the well-equipped city this power finds its best illustration in the ability of the people to create and foster business of all descriptions. Some cities are better situated than others for promoting trade and industry, but it is in the power of every city to enlarge upon its natural advantages. San Francisco is fortunate in being well located and in having a climate that serves as a tonic for bringing out the best possible work on the part of everyone. Long days of hard work are attended with little weariness, and there is not a better locality on the globe for obtaining nights of refreshing sleep. This accounts for the intense activity so observable in all the vocations of life.

As to inland trade, San Francisco can reach out in only three directions, north, south, and east. But that is practically true of all sea-coast cities with respect to domestic trade. There is always a water side. Fortunately for these cities, the water side is frequently the most profitable direction in which to look for trade, though it be of a foreign character. This is particularly true of San Francisco. The water side here makes trade possible at three points of the compass—west, north, and south. San Francisco is the open door to America's most direct trade with the Orient. Since the occupation of the Philippines by the United States, the Orient has been brought into a degree of prominence previously unknown. The direct cable connection with Manila consummated on July 4 by the first messages over a wire controlled by American enterprise, marks the beginning of a new era in the commerce between the United States and the Orient, the development of which will be watched with interest.

PROGRESS OF BANKING IN SAN FRANCISCO.

Whether business fosters banking or banking fosters business is immaterial. It is sufficient to know that there is a vital bond of interdependence between banking and business. In a small town and in a small way, it may be possible to transact business without the presence of a bank in the locality. But even under such circumstances, it is possible that the volume of business might be increased and find more rapid development through the agency of a bank. In the larger towns and cities banks of course are indispensable. They serve as the warehouses where money is stored for the convenience of those who need it and who are willing to pay something for its use. The better the supply and the easier the terms for its employment, the greater will be the demand under normal business conditions. The

NEW CITY HALL.

banker is simply the warehouseman for gathering up and loaning out the surplus funds of the community, or State or country.

The history of banking in California is somewhat unique. It has largely followed lines of its own creation. Though at the time the State came into the Union State banks of issue were the rule throughout the country, the issue of bank notes was interdicted by the organic act. There has, therefore, never been a California State bank note in circulation. When the Government was compelled, through the stress of war in 1861 to 1864, to issue its notes for the payment of troops and the purchase of supplies, California did not take kindly to even that form of paper money, and such as found its way here was quoted in the market the same as any other form of produce. When the National Bank Act became operative and State bank notes were taxed out of existence, California did not care to avail itself of the provisions of that act, and it was not until Congress specially provided for the creation of gold-note banks that the bankers of this State consented to handle even Government paper money.

Had California assumed Statehood under different conditions, its currency system might have followed more closely the lines prevailing in other parts of the country.

But the people of this section came into a monetary inheritance vouchsafed to no other State on anything like such a liberal scale up to that time. This consisted of gold banks to the right and gold banks to the left, in front and in rear. This inheritance more than compensated for the isolation of the State from the great money centers of the country. Real money, and not paper promises to pay real money, was right at the doors of those who needed it. The only thing required was the effort to wash it out of the gravelly beds of the old rivers, sluice it from the banks, or dig it out of the rocks. The people could not be blamed for using this kind of money. They sent millions of it to the East to sustain the credit of the Government, when it most needed help of that sort, and it always had enough left for local use.

The pioneer banks of San Francisco were private affairs, sometimes controlled by a single individual and in other cases by a firm. Prior to the establishment of the United States mint in San Francisco in April, 1854, most of the monetary transactions were settled in gold dust and slugs by weight at so much per ounce. Private assay offices turned out some octagon coins of the value of \$50. Small money was not in such demand then as now. The opening of the local mint changed these primitive customs, and gold dust and gold bars went to the mint in exchange for the beautiful and perfect coins which the Government has ever furnished the people. These early private bankers were generally honorable men, and they retained their form of business many years. Some of the strong incorporated banks of the city are the outcome and direct successors of these early pioneer bankers. At present all the banks in San Francisco are incorporated, and this has been the case for ten years or more. There are some private money lenders, but, like the Rothschilds, they style themselves merchants.

All the banks started in San Francisco are not in existence to day. The mortality along this line here is probably no greater than in other cities showing an equal number of organizations. Foreign banking has always been something of a feature, and was never so much of a feature as now. There are English, French, Italian, Chinese, Japanese, and Russian banks. In addition to the State incorporated banks, there are now seven National banks in the city, whose resources on February 6, 1903, were \$53,657,895. With a single exception, all these were formerly State organizations. The exception is the First National, the oldest in the list and the first organized in the State. This bank was originally started as a gold-note bank, and was the first to come into existence under the law, which was availed of only by the bankers of this State. At one time there were some eight or nine of these banks in the State, all of which went under the currency system in 1879 upon the resumption by the Government of specie payments.

Banks have been under State supervision since May, 1878. Attempts were made to put them under supervision at an earlier date. The serious bank troubles in 1875 crystallized public opinion along that line to such an extent that the Legislature which convened in 1878 found little difficulty in framing a law to create a Board of Bank Commissioners. The commission consisted of three gentlemen appointed by the Governor to serve for four years. As soon as they entered upon their work fear and trembling seized certain bank officials, who knew they had been taking great risks, and the doors of four or five banks were soon afterwards closed for good and for cause. While no one has claimed perfect work for the commissioners, it is conceded that they serve as a sort of supervisory check against some of the weaker and more imperfect forms of banking.

The San Francisco Clearing-House Association came into existence in 1876. Such an organization was proposed at an earlier date, but it was difficult to get the local bankers to harmonize upon taking such action. The organization had not been in existence long before everybody wondered how they had got along without

it. Until within a year there were two clearings daily, except on Saturdays. Now there is only one clearing daily. The clearings for 1877, the first full calendar year, were \$519,948,800. The very next year showed an increase of nearly \$200,000,000. Local bank troubles affected the volume for the next two years, and other causes have come in to make variations in the annual totals of clearings. In 1891, the amount was \$896,426,700, but in 1894 the total was only \$658,526,800. Since 1896 there has been a steady increase from \$583,229,500 in that year to \$1,373,852,025 in 1902, which was a gain of \$195,192,500 over 1901. This year bids fair to exceed 1902.

The growth in banking in California in the last quarter of a century has been something remarkable. A compilation by the writer of all the known State banks was made in February, 1878. This was obtained through personal correspondence with the banks, and showed the condition of the banks on December 31, 1877. The law creating the Bank Commission in California in March, 1878, made the banks bear the expense of that body, by prorating the cost of the same on the deposits of the incorporated banks. The first assessment for that purpose was made on the statement furnished by the writer as of the above date. The first report of the condition of the State banks made by the commissioners was for June 30, 1878. That statement covered eighty-four incorporated banks, of which twenty-eight were Savings and fifty-six were commercial, and the total resources of both classes were \$151,932,430, and the deposits \$100,128,432.

On January 1, 1903, the Bank Commissioners had reports from 256 State incorporated banks of which sixty-two were Savings and 194 commercial, showing a net gain of 172 since June 30, 1878. The condition of the State incorporated banks in California on these two dates compare as follows :

RESOURCES.	June 30, 1878.	January 1, 1903.
Bank premises.....	\$3,025,654.08	\$7,067,875.71
Real estate for debt.....	4,825,975.18	13,652,296.89
Bonds and stocks.....	6,442,272.74	97,014,124.51
Loans on real estate.....	67,193,601.74	120,604,499.66
Loans on bonds and stocks.....	15,300,067.32	36,970,580.84
Loans on other securities.....	2,722,942.67	13,899,879.92
Loans on personal security.....	20,811,113.24	55,430,411.83
Money on hand.....	14,791,217.35	26,041,136.00
Due from banks.....	8,191,064.02	50,266,147.65
Other assets.....	8,538,411.81	2,854,579.81
Total resources.....	\$151,932,430.15	\$423,771,522.32
LIABILITIES.		
Capital paid up.....	\$37,515,973.02	\$40,039,340.79
Reserve and surplus.....	8,715,389.08	34,513,048.18
Due depositors.....	100,128,431.79	333,245,383.85
Due banks.....		11,548,265.16
Public money.....		375,500.85
Other liabilities.....	5,572,637.31	4,049,983.99
Total liabilities.....	\$151,932,430.15	\$423,771,522.32

It will be noticed that the net gain in new capital is quite small, a little over \$2,500,000. Had stockholders depended entirely on their own capital, there would have been no such increase in reserve and undivided profits as the comparison shows. This surplus is not money paid in by stockholders as of late years has been so common in new bank enterprises in other parts of the country, but is largely the net earnings of the banks after paying all expenses and losses and fair dividends to stockholders. The depositors are the ones who have furnished the funds on which the banks have made most of their money.

In addition to the State incorporated banks, there were twenty-one private State banks and fifty-one National banks in operation in California on January 1, 1903.

FERRY BUILDING—UNION DEPOT.

The resources and individual deposits of these several classes compare as follows on that date:

	<i>Resources.</i>	<i>Deposits.</i>
Savings.....	\$214,985,905	\$198,048,906
Commercial.....	208,785,618	135,196,417
Private.....	3,152,474	2,170,489
Total State.....	\$426,923,997	\$335,415,822
Nationals.....	100,792,867	58,195,886
Total.....	\$527,716,864	\$393,591,508
January 1, 1902.....	452,220,567	335,377,660
Increase for year.....	\$75,496,297	\$58,213,848

The gains in both resources and deposits for the calendar year of 1902 were the largest ever reported for any twelve months in the history of banking in the State.

There was a steady gain in these bank resources up to the bank panic of 1893, but the total gain for the six years ending June 30, 1893, was only \$58,276,092 in resources and \$52,665,262 in deposits. The gain in deposits for these six years was considerably less than for the last calendar year. On June 30, 1894, the 283 banks then reporting named their aggregate resources at \$297,352,917 and their deposits at \$196,980,863. Since then every year has shown an increase in these items over the previous year. The growth in banking resources in California in the past decade has been as follows:

	<i>January 1, 1893.</i>	<i>January 1, 1903.</i>
Savings.....	\$149,825,048	\$214,985,905
Commercial.....	132,991,127	208,785,618
Private.....	3,317,772	3,152,474
Total State.....	\$286,133,947	\$426,923,997
National.....	32,918,241	100,792,867
Total.....	\$319,052,188	\$527,716,864

The comparison shows an increase of forty-four per cent. in the resources of the Savings banks, fifty-seven per cent. in the State commercial banks, and over 200 per cent. in the Nationals. It is well to explain that most of the National banks in this State are simply conversions from State banks, some of which had developed con-

siderable business before going over to the new system. The main reason for these changes is supposed to be in the lessened expense of conducting a National bank as compared with a State bank. The matter of note circulation cuts but little figure. Very few bills are found in circulation. Metallic money still holds its old-time place in ordinary business affairs. There is no longer any prejudice to paper money, every dollar of which of whatever character is regarded as good as gold, but there has been great difficulty in keeping the notes in the State. As the balance of trade is often against the coast, the notes form the least expensive form of cash remittances, and they fly away as soon as they are released at the bank.

All the Savings banks are capitalized, with one exception. This is the Hibernia Savings and Loan Society, which has the largest resources and deposits of any bank west of Chicago, and which has a reserve fund that is larger than the combined capital and reserve of any other Savings bank in the State. The law gives every Savings bank with a capital of \$300,000 the privilege of doing a mixed business. These banks have been good money earners and good money distributors in the years gone by. Of late the interest allowed on deposits has been reduced to three and three and one-fourth per cent. per annum, which is hardly up to the standard of some of the older Eastern cities. Still the average amount to the credit of depositors in these banks is larger than in any other State. One reason for this condition of things has been the willingness of the banks to accept large sums on deposit from those who are supposed to be quite capable of making their own investments. Many of these banks have abolished term deposits, and all moneys are now treated alike on dividend days, which are January 2 and July 1.

Banking, as represented by the trust company, had slow development in this State for many years after such institutions had been flourishing in the stronger money centers of the country. For several years only one of these organizations had an existence in the whole State, and that one was in San Francisco. Now there is quite a number here and in the other large cities of the State, and of late years they have had a prosperous run of business. Some pretty large financial schemes

MUSIC STAND, GOLDEN GATE PARK.

have been engineered through these organizations. It is difficult to understand how we could now get along without them. The abundance of money here has made it possible to finance large local bond issues, which has been of much advantage to the people, as it has afforded a needed outlet for the local investment of money. The part these organizations play in the handling of estates is much appreciated, as it saves much useless expense and almost endless litigation. Evidently the trust company has come to stay.

California is proud of her banks and her bankers. As a rule, she has had reason to be. There have been exceptions, too many perhaps. There has been some loose banking and some failures, with losses that have occasioned much hardship. Such things are inevitable in every line of business. Taken as a class, the bankers of the State, considering the inexperience of many of them, and the trying conditions which all of them have had to face in the settlement of a State that has only recently observed its semi-centennial, it must be said that they have done well. They have ever had a high standard before them, and have endeavored to live up to it. They have ever stood for honest money, even at the expense of being called disloyal to the country. They had the solid gold under their feet, and were confident that it was only a matter of time when the advocates of fiat money would be routed, and the world's standard of values would have as staunch supporters in every State as in the Golden State of the West. They have lived to see their predictions fully verified.

FOREIGN AND DOMESTIC COMMERCE.

California's commerce is practically carried on through the port of San Francisco. A few lumber cargoes go direct from Eureka to foreign ports, and some grain cargoes have been shipped direct from ports Los Angeles and San Diego. Both ports import considerable direct from Australia and British Columbia, as well as a few cargoes of cement and general freight from Europe. This year the southern counties of the State have the largest grain crops in many years, but the best grain belt is north of the Tehachapi mountains. Some cargoes of grain will be shipped direct from the lower coast ports this year for the first time in six years, but only such ships as discharge their inward cargoes there will be thus favored. It is possible that half-a-dozen ships may get outward cargoes at San Diego before the end of the year. Two ships engaged for this service cleared early in August.

The foreign commerce of San Francisco for the last ten calendar years has been as follows:

YEARS.	Imports.	Exports.
1893.....	\$39,406,000	\$33,853,300
1894.....	38,514,700	26,410,700
1895.....	38,925,600	33,264,900
1896.....	36,414,900	43,514,000
1897.....	40,846,800	44,280,000
1898.....	36,063,100	35,852,500
1899.....	45,677,900	38,324,900
1900.....	39,424,400	41,419,700
1901.....	37,267,300	41,638,400
1902.....	36,078,300	47,601,400
Total.....	\$388,618,000	\$346,759,800

This review shows an average per annum of \$38,861,800 in imports and \$34,675,980 in exports. The commerce with the Hawaiian Islands was cut out between June 14, 1900, and May 22, 1902.

Of the imports for 1902, China and Hong Kong contributed \$6,964,800; Japan, \$9,005,600; East Indies, \$3,453,300; and the Philippine Islands, \$614,600, a total of \$20,017,800 from these Oriental countries, or the equivalent of fifty-five per cent. from all the sources included in the report for that year. There was no statement

of the value of the imports from the Hawaiian Islands in either 1902 or 1901, and only for the first half of 1900. The value for the five and one-half months in 1900 was \$5,598,800. This shows an average of \$10,000,000 to \$12,000,000 per annum received from that source. Nearly all the Hawaiian sugar crop is sent to San Francisco, a portion of which is re-shipped direct to Eastern refineries. California has always looked upon the Hawaiian Islands as part of its own territory, as much of the capital employed there was obtained from this State, while the trade relations between the mainland and the islands has always been intimate.

Summarized, the exports from San Francisco in 1902 reached a value of \$14,562,265 to Europe, \$11,611,985 to Asia and Oceanica, \$9,687,296 to Australasia and Polynesia, \$4,930,479 to Mexico, Central and South America, and \$1,864,769 to British Columbia, South Africa and other points, making a grand total of \$42,563,796 to foreign ports. There was also a value of \$4,937,628 shipped to domestic Atlantic ports via Panama and the Cape. The shipments to the Hawaiian Islands in 1902 were

NEW CLIFF HOUSE.

only for the last half of the year and embraced a value of \$4,766,000. As much more for the first half of the year should be added to the grand total to make the record complete. The value of the exports to the Orient were \$1,150,000 in excess of 1901, and \$1,700,000 larger than in 1900. Great expectations are entertained in reference to this Oriental trade, on account of the large population available. But these people must be educated up to American ways of living before they become large consumers of American products.

The export trade with Europe is mostly confined to cereals and canned fruit and salmon. In years of good crops this trade is quite important. For the past three years the average has been about \$15,000,000 per annum. The grain export trade of the port has been of great value to the shipping trade here, furnishing a large fleet of sail vessels with outward cargo in the direction which most of them wish to take after discharging cargoes here. In the last cereal year, owing to the light wheat crop of 1902, only 137 vessels were thus loaded, while for the previous cereal year the total was 213. Even that large total is small when compared with the movement in years of big crops. On account of this special feature in the export trade, more square-riggers visit San Francisco during the year than any

other port of the United States. Of course Eastern Atlantic ports enjoy a much larger trade, but steamers play a more important part than the full-rigged ships in the Atlantic trade.

Exclusive of the large number of sail vessels and steamers employed in the Pacific Coast domestic trade, there were 481 arrivals here from foreign ports in 1902, representing a total tonnage of 657,963, all under sail, and 416 steamers having 868,441 tonnage, while from domestic Atlantic ports there were seven sail vessels of 16,118 tons and fourteen steamers of 55,316 tons. The large fleet of big steamers of the American-Hawaiian Steamship Company have superseded ships between New York and San Francisco, and the only sail vessels now arriving here from the other side of the country are the few coal ships from Baltimore. The shipping trade of the port is a very important feature, and represents several million dollars annually in tonnage and other dues, inward and outward freights, wages and salaries of crews and officers, supplies, repairs, and insurance. The use of steamers in the foreign as well as in the coast trade has injured the sail trade to some extent, but at the same time it has created much traffic not before considered possible.

The facilities for loading and unloading vessels are of the most generous and modern character. There is a long stretch of wharves and piers along the water front, and extensive grain warehouses and docks for the grain fleet thirty miles up the bay. For the cleaning and repairing of vessels there are docks to accommodate craft of all sizes. The new dock, hewn out of solid rock, adjoining a similar one in use here for many years, though much larger, can accommodate the largest vessels afloat. It was built at a cost of over \$500,000. It is 750 feet long, 123 feet wide at the top and eighty feet on level of the top of the keel blocks, with twenty-eight feet of water over sill at high tide. The first vessel to be docked was the battleship Ohio last January. This vessel is 393 feet long, 72.2 feet wide, and drew seventeen feet of water when she went in. At the narrowest point there was four feet to spare on each side, and 357 feet between stern and dock gate. Since then the cruiser New York and the Pacific Mail liner Korea have been docked with ease. Two years were spent in building this dock, which is one of the wonders of the country.

SOME OF THE PRODUCTIVE RESOURCES OF CALIFORNIA.

Grain is the chief export staple by water. An average wheat crop is about 1,000,000 tons, though it has not reached that total in the final clean up for several years. The largest crop produced was in 1881, amounting to 1,750,000 short tons. The last 1,000,000-ton crop was harvested in 1901. In four preceding years the crop was from 923,000 to 976,000 tons. In four of the other years it fell below 700,000 tons, and in one of these four years the yield was only 387,000. In 1902 it was 616,000 tons, and it will probably be no larger than that this year, though last spring there was good promise of 1,000,000 tons. Unfavorable weather at the critical stage accounts for the shrinkage. Besides, the increased attention given to the cultivation of barley has been at the expense of wheat acreage. There has been quite a large trade created in Europe for California brewing barley, for which there has been better remuneration than for wheat. California is the largest barley-raising State in the country.

The fruit and wine interests of the State have, for many years, been forging to the front as affording better returns than grain raising. There is now a very heavy trade annually in fresh, dried and canned fruit and wines. For the past five years the pack of canned fruit has been from 2,000,000 to 3,000,000 cases, each case containing two dozen tins. The number of cars of deciduous fruit sent out of the State in the past four years has varied from 6,459 to 7,141, the largest number having been in 1902. The shipments last year were 2,011 cars of pears, 1,777 cars of

peaches, 1,038 cars of grapes, 1,478 cars of plums and prunes, and the remainder consisted of apricots, cherries, apples, quinces and figs. Nearly all varieties of fruit are produced here in abundance. The prune crop last year was 150,000,000 pounds, of a value of \$4,250,000. The raisin crop was 4,800,000 boxes of twenty pounds each, valued at \$4,950,000. There were 22,500 cars of oranges and 2,500 cars of lemons shipped from the State last year.

The wine product of the State for 1902 has been placed at 42,000,000 gallons the largest yet reported. In 1865 it was only 2,000,000. Since 1888 it has been 10,000,000 gallons and upwards. The average for the past decade has been 22,335,000 gallons per annum. This industry is now in better shape than at any previous time since its inauguration. More attention is being given to obtain the best results as to quality and markets of consumption.

California was the first State to take up the beet sugar industry on a large scale. The product last year was 150,000,000 pounds, the largest yet reported.

The fuel oil industry has come into considerable prominence within the past few years. Some oil has been produced here for upwards of thirty years, but it was only in 1895 that the yield was in excess of 1,000,000 barrels. In 1900 it was 4,329,950 barrels. This was doubled in 1901, and in 1902 the product was 13,592,516 barrels. It will be larger than that this year.

Space will not permit further comment on the products of this most wonderful State, so unique in many respects. It has the only redwood trees in the world. It is prominently identified with the only salmon fisheries of note in the world. It is the headquarters of the American whale fisheries. It is practically the only State that produces quicksilver. It leads all other States in its product of raisins, wine and barley. Its citrus fruits equal in quality and quantity those of any other State. Boston could not get along without its beans, nor Milwaukee without its hops. Its honey, nuts, olives and olive oil are the finest produced anywhere. It produces enough leather and wool to clothe and shoe millions of people. Though no longer the leading gold-producing State, the yield of the yellow metal in 1902 was over \$17,000,000, and since Marshall picked up his first piece in the mill-race of Gen. Sutter, the yield is estimated at \$1,500,042,200, more than enough to pay off the national debt, which is about the biggest thing in this country.

People flocked to this State in the pioneer days as miners and traders. Hardly one of them but expected to remain here only long enough to make a "pile," and then return to the other side of the country whence he came. No one thought there was any chance for farming in a section where there was six months of almost incessant rain, to be followed by six months without a drop. Less than ten years after these early settlers landed, California farmers were shipping wheat to Europe, and to-day thousands of families are deriving a good living from the cultivation of the soil in some form. After the miners and traders and farmers came the manufacturers. Only a few of either class became so satisfied with what he made, or so dissatisfied with his conditions here, that he crossed over the continent again for a permanent residence on the other side. California has disappointed fewer immigrants in proportion to the numbers than any other State, and has rewarded more for the faith placed in her possibilities.

California manufacturers have been handicapped in some particulars and favored in others. The higher cost of capital, labor, rents and fuel, and in some of the raw materials that had to be obtained from abroad in the early years of this industry, were certainly drawbacks of a more or less serious character. But the climate was in their favor. There were no days of enforced idleness because of inhospitable weather. There was enough tonic in the air to bring out the best work from the workers. There is hardly a line of manufactures but what is represented in this State, and in no line is there better work performed elsewhere. From toothpicks up to battle ships, the State is proud of its manufactures, and proud of the men whose handiwork they represent. The product of the Union Iron Works alone has given this State a national and an international reputation, for the battleship Oregon was the product of these works. The good foundations on which California manufactures have been reared to their present state of efficiency will make the achievements of success easier hereafter.

BENJAMIN C. WRIGHT.

OFFICERS OF THE AMERICAN BANKERS' ASSOCIATION.

AMERICAN BANKERS' ASSOCIATION.

*TWENTY-NINTH ANNUAL CONVENTION TO BE HELD AT SAN FRANCISCO,
CAL., OCTOBER 20, 21, 22 AND 23.*

The twenty-ninth annual convention of the American Bankers' Association will be held in San Francisco October 20-23, as has already been announced.

This association first began to take form at Saratoga in 1875. A convention of bankers met there and appointed a committee who completed the organization, drawing up the constitution and by-laws, and reporting at a convention held the next year (1876) at Philadelphia. It is not uninteresting to note that the original constitution, as drawn up and adopted at Philadelphia, contained all the essential principles upon which the work of the association has been carried on. There have been minor amendments of the constitution and the work has been enlarged as the association grew, meeting the wants of the increasing banking constituency of the United States. Just as our system of banks differs from the banking systems of other countries, so our association differs from analogous organizations of bankers in other countries, although they have some points in common.

The Institute of Bankers in London is an institution which includes in its membership individual bankers rather than banks. The members meet quarterly or oftener, and subjects of importance from a financial and economic standpoint are treated of in elaborate papers prepared by invited experts. Seldom more than one paper is heard and discussed at each meeting. These papers are elaborate and exhaustive, and with the interesting discussions of the paper are elegantly printed in the "Journal of the Institute." This "Journal" is eagerly sought for by those interested in banking and economic science throughout the world.

The American Bankers' Association meets in convention but once a year. The papers read are not usually so thorough in character as those which appear under the auspices of the London Institute of Bankers. They generally are occupied with some particular point of banking or finance, and the more of what is considered practical knowledge as derived from banking experience, the better they are liked. Singly they do not usually make the impression of the papers of the Institute. They are published all together in the Annual Proceedings of the Convention. Some papers of great value do not appear to attract the attention they seem to deserve when published in this way.

In addition to the literary features of the work of the association are those pertaining to the education of bank clerks and employees, and the protection of members from the work of forgers and other criminals. The educational committee of the association has within the last few years matured a system of chapters of bank clerks and employees in different cities, and has formed and recommended a course of financial study. This educational work is also carried on by the London Institute of Bankers.

The protection of banks which are members of the association, and indirectly of all banks, from forgers, thieves and burglars, forms an important

PRESIDENTS OF THE AMERICAN BANKERS' ASSOCIATION, 1876-1902.

part of the work. It has met with approval by the banks and added largely to the membership. The association is in this respect a terror to the cracksmen and forgers. A large sum of money is each year appropriated for this purpose.

The main benefit of the association and its annual conventions is a social one. Criticisms are sometimes made that the social features throw a shadow over the literary portions of the programme. The encouragement of acquaintance and personal friendship between bankers from all parts of the country was a chief object with the founders, and the successful carrying out of this object has no doubt added much to the solidarity of our heterogeneous system of banks. Since the beginning of the custom of inviting the association to hold its conventions in turn in the principal cities of the country, there is no doubt that interest in the conventions has increased. Acquaintances of great value in business are made at these meetings. There is no better way for a young banker who has talent and capacity to make himself known than by putting in an appearance on these occasions. No class of people seem more inclined to be impressed with a member of the guild who can make a good speech than bankers, and many who possess this gift could find no place where it will do them greater service. It would not be difficult to give numerous examples of this, as will readily be called to mind by those of our readers who have frequently attended these conventions. But bankers are not taken in by trash. What attracts permanent attention must possess solidity. The man who can clearly and pointedly explain the point at issue with force as well, is at once chosen over the declaimer of empty rhetoric. (Of course merely pleasant talkers are also liked. They lighten up the tedium of some of the heavier work of the convention. The presidents of the association, whose principal duty is to preside at these conventions, have been men of fine and dignified appearance, worthy of presiding over a body so eminently representing the respectability and wealth of the United States.

It is often announced when the convention meets how much wealth the delegates have under their control. The capital, surplus, deposits, cash and other items which indicate the business of the banks represented by delegates at these conventions are truly enormous. But the bald announcement of this in the papers is, however, apt to give a false impression. While the delegates are perhaps as a rule men of some personal wealth, they do not own or control the resources of the banks they represent in a personal way. They are properly the custodians of the money of the people. They are to be honored for the confidence that has led to these aggregations of wealth in the numerous banks which pile up the figures when added together. Almost every delegate represents the confidence and trust of the whole community his bank serves. They should be honored, not on the supposition that they are wealthy men, but because they possess the confidence of their fellow men to an extent greater than almost any other class of public servants. It is the people who contribute the capital and who make the deposits who own the banks, and not the banker, who is only the trusted repository of the surplus of the people. A correct view of these things is what is needed to remove the prejudice of the unthinking against bankers and to render powerless the aspersions of demagogues who appeal to such prejudice.

This is the second time the annual convention has been held in San Francisco. The first convention there was in 1892.

PORTRAITS OF THE STATE VICE-PRESIDENTS OF THE
AMERICAN BANKERS' ASSOCIATION.

LOUIS B. FARLEY, *Vice-Pres. for Alabama.*
(Cashier Merchants and Planters' Farley National Bank, Montgomery.)

F. M. MURPHY, *Vice-President for Arizona.*
(President Prescott National Bank.)

J. M. ELLIOTT, *Vice-President for California.*
(President First Nat. Bank, Los Angeles.)

JNO. JOY EDSON, *Vice-President for District of Columbia.*
(President Washington Loan and Trust Co.)

ANDREW RUSSEL, *Vice-President for Illinois.*
(Dunlap, Russel & Co., Jacksonville.)

JOHN PERRIN, *Vice-President for Indiana.*
(President American National Bank,
Indianapolis.)

E. D. NIMS, *Vice-Pres. for Indian Territory.*
(President First National Bank, Roff.)

SCOTT HOPKINS, *Vice-President for Kansas.*
(President First National Bank, Horton.)

OSCAR FENLEY, Vice-Pres. for Kentucky.
(President National Bank of Kentucky,
Louisville.)

J. E. WENGREN, Vice-President for Maine.
(Cashier First National Bank, Portland.)

WM. INGLE, Vice-President for Maryland.
(Cashier Merchants' Nat. Bank, Baltimore.)

LUCIUS LILLEY, Vice-President for Michigan.
(President Lilley State Bank, Tecumseh.)

GEO. PEASE, Vice-President for Minnesota.
(Cashier Citizens' National Bank, Faribault.)

I. S. WHITE, Vice-President for Mississippi.
(President McComb City Bank.)

GRAHAM G. LACY, Vice-Pres. for Missouri.
(Vice-President Tootle-Lemon National Bank, St. Joseph.)

GEO. L. RAMSEY, Vice-Pres. for Montana.
(Cashier Union Bank & Trust Co., Helena.)

G. W. MAPES, Vice-President for Nevada.
(President Washoe County Bank, Reno.)

WM. F. THAYER, Vice-President for New Hampshire.
(President First National Bank, Concord.)

WM. K. HURFF, Vice-Pres. for New Jersey.
(Treasurer Security Trust Co., Camden.)

B. W. WELLINGTON, Vice-President for New York.
(Vice-President Q. W. Wellington & Co's Bank, Corning.)

W. E. BORDEN, *Vice-Pres. for North Carolina.*
(Cashier Bank of Wayne, Goldsboro.)

R. S. LEWIS, *Vice-Pres. for North Dakota.*
(President Red River Valley National Bank,
Fargo.)

A. S. FRAZER, *Vice-President for Ohio.*
(Cashier Xenia National Bank.)

C. M. KECK, *Vice-President for Pennsylvania.*
(Cashier Allentown National Bank.)

WM. A. LAW, Vice-Pres. for South Carolina.
(Assistant Cashier Merchants' National
Bank, Philadelphia, Pa.)

**HARRY R. DENNIS, Vice-President for South
Dakota.**
(President Sioux Falls Savings Bank.)

W. A. SADD, Vice-President for Tennessee.
(Secretary Chattanooga Savings Bank.)

LEWIS S. HILLS, Vice-President for Utah.
(President Deseret National Bank, Salt Lake
City.)

JOHN D. HORSELEY, Vice-Pres. for Virginia.
(President First National Bank, Lynchburg.)

H. D. SMITH, Vice-President for Wisconsin.
(President First National Bank, Appleton.)

NOTE.—The portraits of the other State Vice-Presidents were requested but not received in time for insertion in this issue. Portraits of all the present members of the executive council have already appeared in the MAGAZINE.

THE DRINK EVIL IN ENGLAND.—The American workingman in England is amazed by the amount of drinking done by the English worker. Two months' wages of the average English worker's yearly income goes to the "public house." In no country in the world is there so much drunkenness among the common people. That this abnormal indulgence in drink is a serious tax on industry, is undoubted. English manufacturers whom I have met all tell me that could they keep their workmen sober there would be less to fear from American competition. The "drink bill" of England, the tax on which produces three-eighths of the total revenue of the government, is about eight hundred million dollars a year. Of this huge amount, it is estimated that the working people spend five hundred and fifty million dollars. In proportion to his earnings, the English worker spends four times as much money on drink as does the American.—"The Plight of the English Worker," by Frank Fagant in "Review of Reviews."

QUARRELS OF THE "MONEY KINGS."—Some one remarks that New York will never supplant London as the financial center of the world as long as "a few money kings who control the market deliberately set to work to destroy values because they have quarrelled among themselves." The observation deserves thought.—*St. Louis Globe Democrat*.

NEW COUNTERFEIT \$10 NATIONAL BANK NOTE.—On the Mechanics' National Bank of New Bedford, Mass.; series 1882; check letter "B;" charter No. 743; Treasury serial No. A87055A; bank serial No. 11793; Bruce, Register; Wyman, Treasurer of the United States. A good photograph on plain paper, no fiber; numbers, seal, and panel of back tinted with thin colors. This note should not deceive any careful handler of money. The negative, however, is a fine one.

BANKING IN THE LEADING CITIES.

NEW YORK CITY.

NATIONAL BANK OF NORTH AMERICA.

Both in the point of years and in its strength the National Bank of North America ranks high among the city's financial institutions. Its existence dates back to February 26, 1851, a period of

HENRY CHAPIN, JR., *Vice-President.*

over fifty-two years; and although several severe financial crises have occurred in that time, the bank has stood unshaken, and its growth has been in keeping with that of the city. Its officers and directors, from the date of organization till now, have included the names of those foremost in New York's banking and commercial enterprises.

R. L. Edwards, the President, succeeded Warner Van Norden, who retired from active banking affairs about the time the Bank of the State of New

York, of which Mr. Edwards was President, was merged with the National Bank of North America. Mr. Edwards has had a successful banking career, extending over a period of about forty years.

Charles W. Morse, Vice-President, is prominently associated with the management of a number of city banks, and has been instrumental in bringing about the consolidation of several New York banks.

Henry Chapin, Jr., Vice-President, is also a well-known banker. He entered the Metropolitan National Bank in 1864, and advanced to the position of Assistant Cashier. In 1887 he became Assistant Cashier of the Third National Bank, and in three years was chosen Cashier. Subsequently he was elected Cashier of the National Bank of North America, and continued to hold this position until the absorption of the Bank of the State of New York, when he was promoted to the office of Vice-President.

Alfred H. Curtis, the Cashier, entered the Bank of the State of New York over twenty-five years ago, and has advanced by reason of meritorious service to the important position he now holds.

J. F. Sweasy and Edward B. Wire, Assistant Cashiers, are also well qualified by character and training for their positions. Mr. Sweasy began his banking experience with the Third National Bank, in 1880, and early demonstrated his capacity for thorough and efficient work.

In its first fifty years the National Bank of North America earned on its capital of \$1,000,000, profits amounting to \$4,601,256. The present capital is \$2,000,000, the surplus \$2,000,000, and the deposits \$20,000,000.

Recently the bank took possession of the new banking rooms in its new twenty-five story building, 41-43 Wall street.

GARFIELD NATIONAL BANK—VIEW OF THE BANKING ROOMS.

GARFIELD NATIONAL BANK.

The Garfield National Bank was established in December, 1881, shortly after the death of President James A. Garfield, and the sentiment aroused by his death led to the selection of his name as the distinctive part of the bank's title.

Prominent among the organizers of the bank were the following: George H. Robinson, Jno. J. McCook, A. C. Cheney, Hiram Hitchcock, Henry A. Hurlbut and Joseph W. Drexel.

George H. Robinson was the first President, serving from 1881 until 1884. From January 1, 1884, until his death in July, 1893, A. C. Cheney was President, and under his administration the bank made large gains in its business. It was during this period that the district surrounding the bank developed rapidly as a retail center. Mr. Cheney was succeeded by W. H. Gelshenen, who was noted in financial circles for his ability and sound judgment. Under his careful management the bank continued to grow in public favor. Mr. Gelshenen died in March, 1902, and was succeeded by R. W. Poor.

Mr. Poor is a thoroughly experienced

banker. He began his banking career with the Littleton (N. H.) National Bank in 1881, resigning the Cashiership of that bank in 1888, at which time he came to the Garfield National. In 1891 he was chosen Assistant Cashier and in 1892 Cashier, which position he occupied until elected President upon the death of Mr. Gelshenen. Mr. Poor, by devoting his time and attention strictly to the bank, has kept it in a vigorous and growing condition, the deposits continuing to increase until they now amount to about \$8,000,000.

Originally the capital of the Garfield National was \$200,000, but as the mercantile district surrounding the bank expanded, the business of the bank increased rapidly, and it was found advisable to add to the capital. To make the amount ample for the present and near future, it was decided to increase the capital to \$1,000,000, which was done on March 1, 1901. The surplus is now also \$1,000,000 and the undivided profits \$300,000. The surplus and profits have all been earned, not paid in by stockholders, as is sometimes done in organizing banks. A bank whose surplus is

equal to its capital is very properly regarded as in an exceptionally strong position and is, in fact, frequently singled out for especial commendation. The Garfield National with its large capital and surplus and undivided profits certainly affords the best possible protection to depositors.

R. W. POOR, *President.*

The bank is located at Sixth avenue and Twenty-third street, in the heart of the principal retail district of the city. It is thus favorably situated and is also thoroughly equipped for meeting the important trade requirements of this territory, but is likewise well adapted to handling the accounts of out-of-town banks and bankers.

The banking rooms are especially well equipped, both as regards convenience and safety, and at the same time are most attractive, as is shown by the above view.

The present strong position of the Garfield National Bank and the steady growth in its business may be attributed to the judgment of its management in adapting the institution to the requirements of its patrons. The business is almost wholly commercial in character, representing the legitimate enterprises of one of the greatest centers of the retail trade in the world.

THE LIBERTY NATIONAL BANK OF NEW YORK.

The Liberty National Bank was organized in 1891, and its progress throughout has been very marked. It was for about twelve years located at No. 143 Liberty street.

In January, 1908, the bank moved into its new counting-rooms at 139 Broadway, built for its own occupancy. It is one of the most unique buildings in New York in point of architecture, and not only is it a beautiful edifice, but as a banking office it is complete in every detail. The vaults, which are used exclusively by the bank, were built by the Remington and Sherman Company, and are models of their kind.

It is one of the institutions that have come into prominence in this city during the past decade and risen to a position, none of which is more deserving of mention as a successful type than The Liberty National Bank.

The bank was originally organized with a strong board of directors, among whom were: Henry C. Tinker, Henry Graves, of Maxwell & Graves, bankers; George F. Baker, President First National Bank, New York; E. F. C. Young, President First National Bank, Jersey City; J. Rogers Maxwell, President Atlas Portland Cement Co.; William Runkle, President Warren Foundry and Machine Company; Dumont Clarke, President American Exchange National Bank, New York; John H. Starin, well known in transportation lines in New York; H. C. Fahnestock, Vice-President First National Bank, New York; Garret A. Hobart, later Vice-President of the United States, and J. A. Garland, Vice-President of the First National Bank, New York.

Henry W. Maxwell, was at a later date elected a director, succeeding Mr. J. Rogers Maxwell, and at the same time was elected Vice-President to succeed Mr. Graves—Mr. Graves remaining on the board. The name of Thomas A. Gillespie, of the T. A. Gillespie Company, was also added to the directory, succeeding the Hon. Garret A. Hobart.

Charles A. Moore, of the firm of Manning, Maxwell & Moore, and Francis L. Hine, Vice-President of the First National Bank, were also elected to fill vacancies—the board being increased from thirteen to fifteen members.

The management of this bank has been in the hands of men who belong to the younger class of bankers, and who possess the energy and education that qualify them for a successful career.

Henry C. Tinker, who was one of the incorporators, was for a number of years President of the organization, and retired only from active duties at his own volition. He was succeeded by Henry P. Davison, who was called to the Liberty National Bank from one of the uptown banks as Assistant Cashier in December, 1894. Mr. Davison was an active worker in behalf of the bank, and drew about him many friends. He succeeded to the office of Cashier on the death of James Christie. Subsequently, in June, 1900, Mr. Davison was elected a director and Vice-President of the bank and later President. During his incumbency of the office he devoted his energies to the building up of the bank, and his progressive methods were well expressed by the progress of the institution. Mr. Davison being called to the First National Bank, where he is now Vice-President, left the presidency vacant. E. C. Converse, of the Advisory Committee of the United States Steel Corporation, was thereupon elected his successor.

Mr. Converse is a man of very large means, and is on the board of a great many organizations, among which are the following: American Bank Note Company, Bankers Trust Company, Bowling Green Trust Company, Fourth Street National Bank, of Philadelphia; Illinois Steel Co., International Nickel Co., Kenney Manufacturing Co., Minnesota Iron Co., National Supply Co., of Toledo, Ohio; National Tube Co., New York and New Jersey Railroad Co., North American Co., Orford Copper Co., Pittsburg, McKeesport and McConnellsville Railroad Co., Scarsdale Estate, Shelby Steel Co., of Pittsburg; Tube

Steel Co., United States Realty and Construction Co., William Cramp & Sons Ship and Engine Building Co.; and in addition to being on the Advisory Committee of the United States Steel Corporation, he is one of the directors. Mr. Converse began his career as an errand boy in his father's dry goods store, being afterwards placed in the receiving department of the New York branch of the concern. A few years later he applied for a position with the National Tube Works Company, at McKeesport, Pa., and was successful in securing a position as storekeeper. He rapidly gained a detail knowledge of the business by the study of metallurgy and kindred matters. From the position of storekeeper he was promoted to that of iron inspector, thence step by step to General Manager, Vice-President and President. He is a man of most genial presence, and gathers

E. C. CONVERSE, *President.*

about him a host of valuable friends. His knowledge of business technique is very remarkable, and he is probably one of the most methodical men doing business in the city of New York.

Charles H. Stout entered the National Bank of the Republic in 1881, as a junior clerk. He advanced through practically

every department of the institution, and in 1888 he became Assistant Cashier. Five years later he was made Cashier, at which time he was only twenty-nine years old. Shortly after the death of Eugene H. Pullen, the Vice-President of the National Bank of the Republic, he was elected to that office. Despite the

CHAS. H. STOUT, Vice-President.

fact that Mr. Stout was not much over thirty-five years old at the time he was elected to the vice-presidency, he was recognized as a banker of exceptional ability. When the National Bank of the Republic was absorbed by the First National Bank, Mr. Stout was elected a Vice-President of the consolidated institution. In January, 1903, it was stated that Messrs. J. P. Morgan & Company had acquired a large interest in the Liberty National Bank, and on January 14, of that year, Mr. Stout was elected a director and Vice-President, representing, it is said, the interests of the First National Bank and Messrs. J. P. Morgan & Company.

At the annual meeting in 1903, D. G. Reid, chairman of the board of directors of the Chicago, Rock Island and Pacific Railway Co., was elected a director, and subsequently he was elected one of the

Vice-Presidents. While Mr. Reid handles none of the details of the institution, he is one of the most active members of the board and deeply interested in the success of this institution, his influence being of the greatest power.

Charles W. Riecks, the Cashier, has filled various positions in the bank, with great credit to himself and the institution. Being trained in the modern school of finance, Mr. Riecks is ably equipped to fill the important position which he now holds, both by virtue of his ability and thorough knowledge of the details of banking.

The Assistant Cashier, Frederick P. McGlynn, has been with the bank since its organization, and has a unique ability and qualification for the position he holds.

The original capital of the bank was \$500,000, and in 1892 the undivided profits

D. G. REID, Vice-President.

amounted to \$1,805, with a line of deposits of \$718,000. In the year 1900 the capital was the same, the earnings had increased to the sum of \$504,000; deposits \$5,626,000. In November, 1902, the capital of the bank was increased to \$1,000,000, and its surplus to \$1,000,000; undivided profits \$800,000. The gross deposits of the bank at the present date

amount to \$10,200,000 and the business is steadily increasing.

The bank has had a remarkable career, and ranks probably as one of the very few institutions of its kind in New York

As will be noticed, the list includes some of the most important bankers of the United States, and is recognized as being one of the strongest boards in the country.

NEW YORK NATIONAL EX- CHANGE BANK.

Push and energy have characterized the new management of this institution and, as a result, its growth in the past five years, both in extent and character, has been remarkably gratifying. This progress may be shown most readily by the following comparison :

	Sept. 30, 1898.	June 9, 1903.
Capital	\$300,000	\$1,000,000
Surplus and profits..	50,848	900,030
Deposits.....	1,647,049	6,523,311
Total resources.....	2,000,898	8,463,275

By the recent increase of its capital to \$1,000,000 and the surplus to \$900,000,

CHAS. W. RIECKS, *Cashier.*

that has ever distributed twenty per cent. dividend within ten years of its organization.

The present personnel of the board of directors is composed as follows : George F. Baker, President First National Bank, New York ; Henry Graves, of Maxwell & Graves, bankers, New York ; E. F. C. Young, President First National Bank, Jersey City ; Arthur F. Luke, of Darr, Luke & Moore, New York ; Henry C. Tinker, New York ; J. Rogers Maxwell, President Atlas Portland Cement Co. ; D. G. Reid, Chairman Executive Committee Rock Island system ; E. C. Converse, President ; Francis L. Hine, Vice-President First National Bank, New York ; T. A. Gillespie, New York ; Charles H. Stout, Vice-President ; Charles A. Moore, of Manning, Maxwell & Moore, New York ; Henry P. Davison, Vice-President First National Bank, New York ; Charles H. Warren, Vice-President Chicago, Rock Island and Pacific Railway Company, Chicago, Ill.

JAMES ROWLAND, *President.*

the New York National Exchange Bank has not merely strengthened its position, for it was strong before, but it has especially enlarged its capacity for adequately caring for the greater volume

LEWIS E. PIERSON, *Vice-President.*

of business now being transacted. The New York National Exchange is located in new and thoroughly equipped banking rooms at Chambers street and West Broadway, in the great produce district of the city, and carries a large number of mercantile accounts, based upon dealings in staple commodities. Its service is rendered in the promotion of legitimate trade, and the expansion of business is of the most desirable sort.

The bank makes a specialty of handling drafts drawn with bills of lading attached for country banks, and having a department devoted particularly to this service, it has achieved remarkable success in that line.

The New York National Exchange Bank is one of the city's old banking institutions, having been organized as a State bank in 1851. It entered the National system in 1863, and was under practically a continuous management until October, 1898, when it was reorganized by admitting into its directorate representatives of some of the strongest financial interests in New York. Upon this change in management taking effect

a more active policy was inaugurated, and the results are seen in the extraordinary gains in the capital, surplus and deposits of the bank.

The officers of the bank are: President, James Rowland; Vice-President, Lewis E. Pierson; Cashier, Rollin P. Grant; Assistant Cashiers, Frank M. Burger, David H. G. Penny.

Directors—James Rowland, of James Rowland & Co., President; Warren Cruikshank, of E. A. Cruikshank & Co.; James M. Donald, Vice-President Hanover National Bank; George C. DeLacy, counsellor at-law; William Halls, Jr., president New York Land and Warehouse Co.; Hudson Hoagland, retired; Lee Kohns, of L. Straus & Sons, pottery and glassware; Wm. J. Merrall, of Acker, Merrall & Condit Co., wholesale and retail grocers; James E. Nichols, of Austin, Nichols & Co., wholesale grocers; William J. Rogers, John H. Seed, wool commission; William Wills, president Merchants' Refrigerating Co.; Daniel W. Whitmore, of president Borden's Condensed Milk Co.; D. W. Whitmore & Co., commission, butter and cheese; Frank W. Wool-

ROLLIN P. GRANT, *Cashier.*

worth, of F. W. Woolworth & Co., 5 and 10 cent stores; Lewis E. Pierson, Vice-President.

NEW AMSTERDAM NATIONAL BANK.

The Bank of New Amsterdam, incorporated as a State institution in May, 1887, commenced business on October 17 following. Its establishment occasioned considerable interest at the time, in view of the distinctly notable character of its directorate, which contained many of the most prominent financiers of the day, in-

R. R. MOORE, *President.*

cluding among others such names as Thos. C. Acton (its first President), Samuel D. Babcock, Robert Goelet, Geo. Jones, Jesse Seligman, Frederick D. Tappen, and Jacob D. Vermilye.

In April, 1901, in view of its increasing business, it was thought advisable to broaden its character and steps were thereupon taken to have it reincorporated as a National bank. Authority to so act was received from the Comptroller of the Currency and the bank transacted business under the name of the New Amsterdam National Bank on April 18, 1901.

R. R. Moore, President of the New Amsterdam National, has been with the bank from the time it began business. In 1895 he was chosen Cashier, and Vice-President in the following year. On January 12, 1901, he was elected President.

C. W. Morse, a prominent capitalist, is Vice-President, G. J. Baumann, Cashier, and J. G. Hemerich, Assistant Cashier.

The directors of the bank are: C. T. Barney, J. Romaine Brown, Frank Curtiss, W. M. Healey, R. V. Lewis, Jas. McMahon, R. R. Moore, C. W. Morse, H. F. Morse, Daniel O'Day, Frank W. Sanger, Louis Stern, Geo. J. Smith and F. K. Sturgis.

The bank has a capital of \$500,000.00 and a surplus of \$500,000.00.

Its conservatism has at all times been recognized and commended, while its progressiveness as shown in the attention to the requirements of its depositors and the public, has resulted in placing it in the front rank of the financial institutions of the city. It is a depository of the United States, of the State of New York and also of the city of New York.

The bank occupies attractive and commodious banking rooms in the Metropolitan Opera House at Broadway and Thirty-ninth street, where are also located the vaults of the New Amsterdam Safe Deposit Company.

IRVING NATIONAL BANK.

It is a pleasure to note the growth and progress of this old institution, whose advancement has been gained by a strict adherence to sound banking principles and methods.

When the bank was founded—more than half a century ago—its organizers decided to give it a title that would be at once distinctive and at the same time would honor Washington Irving, then at the height of his popularity, and whose name still survives among the worthiest of American literary men. This proved to be a good stroke of business policy, the bank being successful from the start.

The Irving Bank was organized in 1851 as a State bank, and was one of the original members of the New York Clearing-House Association. Its first home was at 279 Greenwich street, removal being shortly afterwards made to its new banking house on the northeast corner of Warren and Greenwich streets. This structure was erected in connection with the Irving Savings Institution, which was established in the same year.

Owing to its expanding business the Irving National Bank was forced to seek

in 1852 by John Thomson. On February 3, 1862, John Castree, a well-known merchant, was appointed President *pro tem.* and continued in the presidential

IRVING NATIONAL BANK.

new quarters, and has recently taken up its abode in the Irving Building at the corner of Chambers and Hudson streets, a cut of which may be seen above.

The new banking rooms afford ample facilities for the convenience of the bank's large number of depositors. The fittings and furnishings are attractive, and the equipment is the best that modern skill and taste can provide.

Edward H. Laing was the first President of the Irving Bank. He died soon after assuming office and was succeeded

CHAS. H. FANCHER, President.

chair until January, 1876, when Isaac Odell undertook the management of the bank. His incumbency ended in June, 1877, when John L. Jewett, Jr., was made President. Mr. Jewett died in October, 1890, and Charles H. Fancher, the present executive, was elected on October 31, of that year. Charles F. Matlage and Samuel S. Conover were elected Vice-Presidents respectively in 1897 and 1902. Benjamin F. Werner was appointed Cashier in 1901.

On July 1, 1865, the Irving Bank relinquished its State charter and became a National institution, taking as its title the Irving National Bank of New York. The capital of the Irving Bank was originally \$300,000. In 1857 it was increased to \$500,000, and on July 1, 1902, the capital of the Irving National Bank was increased to \$1,000,000, giving the bank a financial responsibility of \$1,000,000 capital, \$750,000 surplus and \$268,000 undivided profits. These sums, together with the individual liability of the stockholders, make a total responsibility to

depositors of over \$3,000,000. The total dividends paid by the Irving Bank and the Irving National Bank up to and including January 1, 1903, amount to

CHAS. F. MATTLAGE, Vice-President.

\$1,939,705.48, which attests the prosperity of the institution.

An examination of the comparative statements of condition of the bank on January 1, 1853, and February 6, 1903, is interesting and indicates the progress made during the past fifty years.

The officers of the bank are men of long and successful experience in banking and general business.

Charles H. Fancher, the President, came to New York city in 1864 and since then has been engaged continuously in banking. His connection with the Irving National Bank dates from 1866.

SAMUEL S. CONOVER, Vice-President.

He served the bank acceptably in various capacities, having been paying teller for thirteen years. In April, 1890, he was tendered and accepted the office of Cashier of the Clinton Bank, and in November following was elected Presi-

dent of the Irving National—the notification of his election being the first information that his name was being considered by the directors. Mr. Fancher is a member of the clearing-house committee of the New York Clearing-House Association, Treasurer of the Irving Savings Institution, and a member of the Chamber of Commerce.

Charles F. Mattlage, Vice-President, is the head of the large wholesale provision house of Charles F. Mattlage & Sons, which he founded many years ago. He

BENJAMIN F. WERNER, *Cashier.*

is also Vice-President of the First National Bank, Hoboken, N. J., in which city he has long resided.

Samuel S. Conover, Vice-President, was born in Passaic, N. J., in 1869, and entered business in 1884, with the New York Mercantile Exchange, with which he remained three years, when he accepted a position in the claim department of the Southern Pacific Railroad. After two years of railroad business, Mr. Conover became connected with the Fourth National Bank, of New York, with which he continued for ten years, serving as secretary to the President and Vice-President of the bank. In 1900 Mr. Conover served during the Presidential

campaign of that year as financial secretary to Cornelius N. Bliss, treasurer of the Republican National Committee. At the successful close of the campaign he became connected with the American Cotton Company, remaining with that company as secretary and assistant treasurer until he came to the Irving National Bank as Vice-President in 1902.

Benjamin F. Werner, Cashier, was born in New York city in August, 1857. He was educated in the public schools of the city and after graduation entered the Irving National Bank in 1873 as assistant bookkeeper. He was promoted to various positions, becoming Assistant Cashier in 1896. In 1902 he was elected Cashier.

The bank is well located, and the solid commercial interests of the lower West Side district, comprising some of the largest and most successful business establishments in the city, are well represented in the bank, as may be seen from the list of directors following :

Directors : Charles F. Mattlage, of C. F. Mattlage & Sons, wholesale provisions ; Charles H. Fancher, President ; William H. B. Totten, President Irving Savings Institution ; Samuel B. Downes, of S. B. Downes & Co., produce ; Charles Reed, president Pettit & Reed, Inc., commission ; John W. Nix, of John Nix & Co., produce ; Henry Kröger, president Henry Kröger & Co., wholesale liquors ; Daniel P. Morse, president Morse & Rogers, wholesale boots and shoes ; William H. Barnard, raw silk importer ; William C. Demorest, president Realty Trust ; William Zeigler, capitalist ; Hampden E. Tener, Jr., late of Carnegie Steel Co. ; Samuel Crooks, of Samuel Crooks & Co., wholesale teas and coffees ; Samuel S. Conover, Vice-President ; Theo. F. Whitmarsh, vice-president and treasurer Francis H. Leggett & Co., wholesale grocers.

With this strong board and the energetic and efficient management, it is unquestionable that the bank will continue to add desirable accounts to its already large list of banks, individuals and firms who transact their banking business with the Irving National Bank.

L. A. NORTON.

L. A. Norton, of 25 Broad street, New York city, makes a specialty of bank and trust company stocks and high-grade bonds. As an aid to investors in bank and trust company stocks, he compiles and publishes at regular intervals booklets showing a number of facts relating to these institutions, derived from official sources. Each class of banks is treated in a separate booklet, and the information given comprises the following items: Name, capital, surplus and profits, deposits on different dates for comparison,

L. A. NORTON.

with increase or decrease; year established, par value of stock, book value at different dates, with increase or decrease; dividends paid for year, date and amount of last dividend, market value of stock, with bid and asked prices, per cent. of bid price to book value, and annual return in dividends at bid prices.

This information affords a trustworthy guide for those who are seeking to make investments in bank stocks, and Mr. Norton's familiarity with this class of securities makes it possible for him to be of great service to investors. He has built up an extensive business, based upon a careful study of the requirements of those who seek the greatest safety

combined with a fair return on their investments. The advantages offered by bank shares are perhaps not so generally known as they should be. Most of the banks in New York are old and well-established institutions and their shares are wholly free from the hazardous character which too frequently attaches to industrial and other stocks.

The booklets compiled by Mr. Norton will be of great usefulness in bringing to the attention of investors an attractive high-grade investment. They are also exceedingly valuable for their statistical features as well.

BANKERS TRUST COMPANY.

The Bankers Trust Company, which opened its doors for business on March 30 last, has already made remarkable strides forward, and its success is now considered by the financial community as assured. The capital of the company is \$1,000,000, and the surplus paid in is \$500,000. Thus, with the par value of the stock \$150 per share, the market quotations, as given in the daily press, have been around \$300 per share almost since the inception of the company.

The high value put upon the company's stock by the outside public seems to be due to the unique make-up of the board of directors, representing as it does nearly a third of the New York Clearing-House membership and many financial institutions of the highest reputation. Every member of the board is a banker in active life, and the opportunities that are therefore likely to accrue to the Bankers Trust Company from these various sources of assistance are expected to be considerable.

The board of directors above alluded to is made up as follows: Stephen Baker, President Bank of the Manhattan Co., New York; Samuel G. Bayne, President Seaboard National Bank, New York; Jas. G. Cannon, Vice-President Fourth National Bank, New York; E. C. Converse, President; Henry P. Davison, Vice-President First National Bank, New York; James H. Eckels, President Com-

mercial National Bank, Chicago; Granville W. Garth, President Mechanics' National Bank, New York; A. Barton Hepburn, Vice-President Chase National Bank, New York; William Logan, Cashier Hanover National Bank, New York; Edgar L. Marston, Blair & Co., bankers, New York; Gates W. McGarrab, President Leather Manufacturers' National Bank, New York; Geo. W. Perkins, J. P. Morgan & Co., bankers, New York; William H. Porter, President Chemical National Bank, New York; Daniel G. Reid, Vice-President Liberty National Bank, New York; Francis H. Skelding, Cashier First National Bank, Pittsburg; E. F. Swinney, President First National Bank, Kansas City; John F. Thompson, Vice-President; Albert H. Wiggin, Vice-President National Park Bank, New York; Robert Winsor, Kidder, Peabody & Co., bankers, Boston; Samuel Woolverton, President Gallatin National Bank, New York; Edward F. C. Young, President First National Bank, Jersey City.

The officers of the company are: President, E. C. Converse; Vice-President, J. F. Thompson; Secretary and Treasurer, T. W. Lamont; Assistant Treasurer, D. E. Pomeroy; Assistant Secretary, L. H. McCall. Mr. Converse, who is also President of the Liberty National Bank, is a member of the Executive Committee of the U. S. Steel Corporation and is a director in many well-known enterprises. John F. Thompson was for many years Cashier of the Seaboard National Bank, resigning that position to become Vice-President of the Bankers Trust Company.

Although the Bankers Trust Company has been in business only five months its deposits have increased rapidly and now stand at over \$7,000,000. The company has been located temporarily at No. 143 Liberty street, the former site of the Liberty National Bank. Before October 1, however the company will move its offices to No. 7 Wall street, at the corner of Wall and New streets, where most commodious and handsomely fitted up banking rooms are situated, directly in the heart of the financial district. The

friends of the company predict for it after this change of location an even more rapid growth.

BANKERS' LIFE INSURANCE COMPANY.

The Bankers' Life Insurance Company of the city of New York is essentially a bankers' company. It was organized a number of years ago by those prominently connected with the leading banking and financial institutions of New York.

FOSTER M. VOORHEES, President.

The progress of the company has been steady and sure and it now stands well up in Old Line ranks.

The policies issued by it embrace all forms of participating and non-participating insurance, and are the most liberal offered for sale by any company of note.

In January of this year the Hon. Foster M. Voorhees, ex-Governor of New Jersey, was elected to the presidency of the Bankers. Little here need be said as to his ability and integrity. Under his guiding hand and far-sightedness the company is making rapid strides, and is becoming more favorably and generally known than heretofore, and is now mak-

ing an aggressive and successful campaign for new business in some ten or twelve States.

The business policy of this company is one of conservatism and fair dealing to those who carry policies in it. It would be well for all contemplating insurance to correspond with this splendidly-managed institution.

BANK AND OFFICE FURNITURE AND FIXTURES.

At no previous time have the banks ever paid so much attention to the solidity and beauty of their buildings and the taste and elegance of the furniture and fittings required for the safe and convenient transaction of business. It is found, too, that this is not an extravagant use of money, but a good investment. People now seem to expect that a bank shall be appropriately housed, and that the furnishings of its banking rooms shall be in accordance with the standing of the bank. Visible signs of prosperity are a

necessary part of a modern bank's equipment.

No matter how fine a bank building may be, if its furniture is shabby or does not harmonize with the banking rooms, the effect is incongruous and disappointing. The architectural woodwork and furniture are two of the most important features in the fitting up of a bank's quarters. They should be under the supervision of some one who has made a specialty of this branch of work, and who can point to convincing examples of his skill and taste.

Geo. W. Cobb, Jr., of 144-148 Nassau street, New York city, is a manufacturer of architectural woodwork and special furniture, and has been called on to design and install work of this character in some of the finest banking rooms in the country. Among the city banks he has fitted up may be mentioned the New York National Exchange Bank, at West Broadway and Chambers street, and the Broadway Trust Co. at Broadway and Eighth street. He also designed and

PRESIDENT'S ROOM, SECOND NATIONAL BANK, ORANGE, N. J.

manufactured the furniture and wood-work for the Second National Bank, of Orange, N. J. An illustration of the President's room in this bank is shown herewith.

Some of the handsomest banking rooms in the country are to be found in Pittsburg, and in one of these—the Colonial Trust Company—may be found a fine exhibition of Mr. Cobb's superior craftsmanship.

Bankers contemplating the erection of new buildings or the remodelling and refitting of their counting rooms will find that Mr. Cobb is well qualified by experience and otherwise to give them good service in his line of work.

BANK MONEY ORDERS.

Bankers are just now taking a very keen interest in the profits to be made from the issuing of bank money orders. It is shown by statistics that the money orders issued annually by the express companies and the Government amount to between \$500,000,000 and \$600,000,000, and it has heretofore been the practice of most banks to cash these orders for their customers without charge. In other words, the profits to be had from the issuance of the orders go to the express companies and to the Government, while the banks furnish the funds to cash the orders in the first instance.

But now the banks realize that by issuing the orders themselves they can greatly enhance their profits, not only by the immediate returns from the sale of the orders themselves, but it is found to increase earnings in other ways. Although a bank draft is not essentially different from a money order, the latter term seems to be more familiar to the public, and it has been adopted by many of the banks.

Associations have been formed by a number of the State bankers' associations to issue a uniform draft, payable at par by any bank in the State where the order is issued.

The Bankers' Money Order Association, of New York city, is formed on still

more comprehensive lines, issuing orders to banks that are payable at par anywhere. Not only does the association do this, but it permits the issuing bank to keep all the profit accruing from the issue of the orders, besides retaining the funds in its own possession.

In an address delivered before the convention of the Washington State Bankers' Association, at Whatcom, Wash., July 25, Edwin Goodall, Treasurer of the Bankers' Money Order Association, thus explained the method of issuing the orders:

"On July 1 we issued a circular to the members of this association stating that we were now enabled to throw off, as we call it, our charges, or in other words, we would supply to you our orders in book form, twenty in a book, limited to the amount of \$50 and under for each order, so that you could issue these orders to the public, making your own charge, keeping all the profits therein, and weekly remit to us in New York a check on yourself or a correspondent that would be agreeable to each and every one of you. We are enabled to do this from the statistics that have been obtained by actual experience, and therefore we feel that if there is any use of the money that is necessary for the banking fraternity to have, it should be given to the bankers in their own locality, or in other words, keep the money right in your vicinity, loan it, if possible, to your own customers, and when it is necessary to have a credit with us in New York city, we will give you that credit by your Cashier's check which comes to us, which we do not deposit in New York—if we did, we would have to pay a clearing-house charge—but we deposit it in New Jersey at par. We take it from you, gentlemen, at par, and as long as you can make a profit and keep your money here and your settlement comes to us promptly, we are able to conduct this business profitably to ourselves, as well as profitably to the banking fraternity."

This proposal is one that will be of direct interest to every bank seeking to

gain all the profit to which it is entitled, and will be found worthy of careful investigation. Bankers desiring to obtain further information should address Edwin Goodall, Treasurer Bankers' Money Order Association, Corn Exchange Bank Building, New York.

BANK AND FINANCIAL ADVERTISING.

The matter of effective advertising for banks and other financial institutions is

F. W. FORBUSH.

now receiving a large share of the attention of those charged with the management of such corporations. Progressiveness demands that careful attention shall be given to this feature, which has

grown to be one of the important means of building up business. There is a tendency to discard the old dull and prosaic style of announcements, and without being sensational to set forth in clear language and attractive manner the facilities that the bank or other institution offers. In bank and corporation advertising character and tone are naturally looked for, and these, as a rule, can be imparted only by the expert. It is the poorest sort of economy to leave the advertising in the hands of one not thoroughly qualified to attend to its every detail. The time and attention necessary to produce satisfactory results can rarely be spared by the bank's employees or officers, and the best method is undoubtedly to entrust the preparation of advertisements to some one whose specialty is bank advertising, the bank of course exercising a general supervision over his work.

A well-designed advertisement in a proper medium or a forcefully-written and attractively printed booklet, serves to bring the advantages of the bank before the public in a way that will increase business and profits.

F. W. Forbush, of 82 John street, New York, makes a specialty of writing, arranging and printing financial literature for banks, mining, transportation or industrial corporations. His long experience in handling this class of advertising enables him to furnish his customers with literature having business-bringing qualities. Mr. Forbush also has special facilities for mailing advertising matter in New York city and vicinity for out-of-town financial institutions.

CHICAGO.

**THE NATIONAL BANK OF THE
REPUBLIC OF CHICAGO.**

Banks, as well as persons, have their points of individuality. Those traits distinctively characteristic of the National Bank of the Republic, in Chicago, are: uniform courtesy from every officer and

person who enters its doors is entitled to polite treatment. So consistently is this rule put into practice that its observation springs from a spontaneous impulse. Certainly it is lived in spirit as well as

JOHN A. LYNCH, *President.*

W. T. FENTON, *Vice-President.*

clerk to every person crossing its threshold; the encouragement and efficient aid it extends to all those engaged in sound business enterprises. These two things are thoroughly characteristic of the National Bank of the Republic; without them it would be something different and something less than it is. They have both contributed to the solid and rapid growth which this bank has enjoyed since it was founded thirteen years ago. There is a rule in this bank that every

the letter, and constant public comment bears witness to the effectiveness of this unflinching courtesy in building up a sentiment of general friendliness for the bank. The messenger boy is as certain of courteous treatment in this institution as is the visiting bank President. This puts the point of politeness so plainly that it is universally recognized as something in the atmosphere of the National Bank of the Republic.

This bank has always contended that

J. H. CAMERON, Cashier.

the country banker desires, first of all, strength and fidelity in its reserve correspondent, joined to a readiness to do the right thing in time of emergency. Following this policy, and being in a position to give the best possible service at all times, the business of the National Bank of the Republic has been built up, as shown by its constantly-increasing list of correspondents, who agree in believing that a banking connection must be established on an equitable basis, allowing some profit to both parties to the arrangement; otherwise it cannot prove of permanent value.

The fact that several officers of the bank—and those coming most frequently in contact with the public—have been trained behind the counters of country banks, has resulted in building up a large line of country correspondents for the National Bank of the Republic. To a peculiar degree it is a correspondent bank. The men who manage it know the needs of the banker outside the great money centers, and can appreciate his situation, because they have been in it themselves. This enables them to be especially helpful.

The system by which the details in this bank are cared for is thoroughly modern and in accordance with the best methods known to the banking business.

Only two years after the organization of the bank, the soundness of its foundation and the wisdom of its management were put to the severest test in the panic of 1893; but it passed through this ordeal triumphantly. The business of the institution has grown so rapidly that in 1902 it was decided to add one million dollars to the capital and five hundred thousand dollars to the surplus of the bank. A good idea of the growth of the National Bank of the Republic may be had from the following comparative statements made in April of each year:

YEAR.	Capital.	Surplus and profits.	Deposits.	Total resources.
1895...	\$1,000,000	\$108,587	\$2,461,808	\$3,649,268
1896...	1,000,000	126,640	3,160,200	4,387,563
1897...	1,000,000	124,678	3,768,940	4,964,177
1898...	1,000,000	160,860	5,523,815	6,786,435
1899...	1,000,000	153,258	9,741,206	11,026,636
1900...	1,000,000	191,787	9,857,747	11,692,427
1901...	1,000,000	217,593	12,742,664	14,721,467
1902...	1,000,000	271,452	13,736,274	15,067,724
1903...	2,000,000	798,891	14,450,145	17,462,863

President John A. Lynch is in the prime of life, and is a native of Chicago. He helped to organize the bank, and was elected its President a few months later.

R. M. MCKINNEY, Assistant Cashier.

Mr. Lynch has had wide experience in business, in which he has been very successful. He devotes his entire time to the loans of the bank, and is said to be one of the best informed men on bank credits in Chicago, having a special department for collecting and analyzing credit information.

William T. Fenton, the Vice-President, is a man of national reputation as a banker, being nearly as well known in New York as he is in Chicago. Owing to his ripe experience, extending over a period of twenty-five years of constant activity in his chosen sphere, his opinion

R. L. CRAMPTON, *Assistant Cashier.*

on monetary questions is thought, by bankers and business men from a large portion of the country, to be almost unerring in its accuracy. He is prominently identified with the commercial interests of Chicago, is a member of the Executive Council of the American Bankers' Association, and President of the Chicago Clearing-House Association. When important financial matters present themselves, affecting the general business situation, Mr. Fenton's advice is always welcome. His agreeable manner has won for him many friends throughout the entire country, and it is only right to say that he is one of the

most popular bankers in the United States, notwithstanding his retiring disposition.

John H. Cameron served his apprenticeship in a country bank. He was Assistant Cashier of the National Bank of the Republic for several years, previous to which he was connected with the Merchants' National Bank. He became Cashier when Mr. Fenton relinquished the duties of that position.

R. M. McKinney, the genial Assistant Cashier, also received his early training in a country bank, and has held his present office for nearly ten years, during which period he has become a master in handling the many important details incident to a city bank.

About two years ago, R. L. Crampton, Assistant Cashier, was called from the Northern Trust Company, in which large institution he had a thorough and varied training for twelve years. Not a little of his experience was gained in the care of estates while with the trust company. He is greatly interested in studying the varying needs of the banks in the different parts of the country, and enjoys extending his acquaintance with out-of-town bankers, to whom he is always glad to be of service.

Sound and progressive methods are characteristic of this bank. It seeks good commercial accounts, and serves as a depositary for out-of-town banks, giving especial attention to this branch of the business.

NATIONAL BANK OF NORTH AMERICA.

This bank completed its first fiscal year on June 30, 1903. The second semi-annual statement issued to stockholders on that day shows deposits of \$12,273,701.53; and as a result of the first year's operation the net earnings of the bank were \$131,292.40, after charging off about \$17,000 furniture and fixture account and premium on bonds. This is about six and one-half per cent. on the capital stock.

The various statements issued by the bank show a steady growth both in de-

posits and net earnings. Starting out with over \$3,000,000 on the opening day, the bank had almost doubled these figures at the end of one month. On November 25, in response to the Comptrol-

ISAAC N. PERRY, *President.*

ler's call, the statement showed deposits of \$9,000,000. The three successive statements of February 6, April 9 and June 9, showed deposits of about \$11,500,000.

The bank has pursued an aggressive though conservative policy since its organization, and has been exceptionally successful in building up its deposits during the short time of its existence.

The officers of the bank are : Isaac N. Perry, President ; Bernard A. Eckhart, Vice President ; Charles O. Austin, Vice-President ; Julius S. Pomeroy, Cashier ; Francis V. Putnam, Assistant Cashier.

The bank occupies handsome and commodious quarters in the Woman's Temple, at the corner of Monroe and La Salle streets. The Woman's Temple is one of the largest office buildings in Chicago, and both as to location as well as convenient arrangement affords desirable quarters for a banking institution.

Isaac N. Perry, the President of the bank, is a native of New York State, whose banking career began with a posi-

tion in the First National Bank, of Aurora. He subsequently was elected Cashier of the Rochelle National Bank, of Rochelle, Ills., where he remained twelve years. In 1885 Mr. Perry organized the Union National Bank, of La Crosse, Wis., becoming its Cashier ; this office he occupied until 1891, when he accepted the vice-presidency of the Continental National Bank, of Chicago, occupying that office until the organization of the National Bank of North America.

Charles O. Austin is a native of the State of Missouri, and his banking experience commenced as a clerk in the Marion County Savings Bank at Palmyra, Mo. He later became Assistant Cashier of this bank, resigning his position in 1897, to assume the duties of bank examiner. In 1897 Mr. Austin was elected Cashier of the Mechanics' National Bank, of St. Louis, which position he occupied until he came to the vice-presidency of the National Bank of North America. At the annual convention of the Missouri Bankers' Association, in 1902, Mr. Austin

CHARLES O. AUSTIN, *Vice-President.*

was elected president of the association, which was at that time the largest State bankers' association in this country. During his incumbency he was active in introducing several new features such

J. S. POMEROY, *Cashier*.

as the placing of burglary insurance through the secretary of the association and other features which have since been adopted by some of the other State associations.

Julius S. Pomeroy was born in Brooklyn, N. Y., and his banking experience commenced in 1884, when he became connected with the Homer National Bank,

F. V. PUTNAM, *Assistant Cashier*.

of Homer, N. Y. Some three years later he accepted a position with the First National Bank, of Cortland, N. Y., and in 1892 was made Assistant Cashier of the First National Bank, of Winona, Minn. This position he held until his election to the cashiership of the National Bank of North America at the time of its organization.

Francis V. Putnam came from Peoria, Ill., where he began his banking career in the First National Bank of that town. When the Globe National Bank was organized in Chicago he became connected with that institution and later went to the Continental National Bank when it absorbed the Globe National. At the time of the organization of the National Bank of North America Mr. Putnam became its paying teller, which position he held until his election to the assistant cashiership.

CONTINENTAL NATIONAL BANK.

The Continental National Bank, of Chicago, which in February of the present year completed its first charter cycle, occupies a most conspicuous place among the cosmopolitan banks of the country, and has challenged the admiration of its confreres by its steady advance and progress.

Founded in 1883, the bank's early growth has been moderate, tempered as it was by a well calculated policy of conservatism, which augured well for its future success. Slowly its deposits have risen until in 1895 they reached the nine million dollar mark. But from that time on its growth and development have been well-nigh marvelous, and in its report of June 9, 1903, to the Comptroller of the Currency, the bank showed deposits in excess of thirty-five million dollars.

One cannot view these achievements without turning one's thoughts to the hands and minds which have been instrumental in bringing about such conspicuous results, and the management of the institution is entitled to the most unreserved tribute for the remarkable skill,

energy and wisdom displayed in the handling of affairs.

Guided by a broad and liberal policy, the influence of the bank has found its way into the remotest corners of the country, and the deposit ledgers show to day a patronage made up from among all the States and Territories of the Union.

The growth of the Continental National Bank becomes all the more significant when it is considered that the bank has been but a moderate participator in the consolidation movement which attained such enormous proportions during the years from 1897 to 1902. Many a bank of long years' standing was forced to renounce its individuality and had to surrender to the irresistible progress of amalgamation, forced to join its fortunes with those of the stronger rival. Thus, institutions which withstood the test of the "survival of the fittest," doubled, yea, trebled their volumes by the acquisition of business until then controlled by independent institutions.

The Continental National Bank absorbed in 1897 the International Bank, and in 1898 the Globe National Bank, and from these absorptions made a gain in its deposit line of about three million dollars. The remainder of its growth is the result of ceaseless labors and the influence of a policy which carefully respected the needs and requirements of its customers, and studiously cultivated and administered the business entrusted.

Hand in hand with the growth of the institution came the demand for larger quarters. The bank occupies its own building, a modern nine-story structure which covers the La Salle street front of the block bounded by Adams and Quincy streets. The quarters originally occupied were located in the north end of the second floor. Pressed for more working space, the management has gradually extended the confines of the office until they eventually comprised the entire second and third floors. The clerical force was enlarged in keeping with the demands of the business. By the introduction of labor-saving devices the clerical

strength has been maintained at a minimum, and the precision and dispatch with which the business is handled is the wonderment of visitors.

The officers of the institution are men who compel the most generous recognition for their fine qualities which have made such signal success possible, and they are well known to the banking world.

The following is the list of officers and directors:

Officers: President, John C. Black; Vice-Presidents, G. M. Reynolds and N. E. Barker; Assistant Cashiers, Ira P. Bowen, Benjamin S. Mayer, William G. Schroeder, Herman Waldeck and John McCarthy.

Directors: John C. Black, Albert J. Earling, J. Ogden Armour, Henry Botsford, F. Weyerhaeuser, Alexis W. Thompson, Wm. G. Hibbard, P. A. Valentine, George M. Reynolds, N. E. Barker, William C. Selpp and Berthold Loewenthal.

NATIONAL LIVE STOCK BANK.

To the National Live Stock Bank of Chicago is due the distinction, in reviewing the points of merit in Chicago banks, of doing a larger volume of business, in the aggregate, than any other bank of equal footings in the United States. Its financial record is remarkable in its business results, considering the fact that with its capitalization of \$1,000,000, and surplus and undivided profits of \$1,300,000, its aggregate deposits during the past year amounted to more than \$750,000,000.

This tremendous volume of business has not come by chance, but is due to the fact that the National Live Stock Bank possesses facilities for handling its business in a thoroughly modern and up-to-date manner, and its solidity and trustworthiness need no testimonials.

In addition to its being the fiscal clearing-house for the greatest industry conducted in an equal area in the world, this bank is making tremendous strides towards the front rank in the handling

S. R. FLYNN, *President.*GATES A. RYTHUR, *Cashier.*

of out-of-town accounts. That the courteous treatment of its patrons is appreciated is evidenced by the growth of its out-of-town deposits, which show a remarkable gain during the last year.

Since its inception in 1888 the bank has steadily kept pace with the growing needs of its clientage until to-day it

stands an equal in every way to any bank in Chicago.

The directorate is composed of men who are numbered among the financial stalwarts of their city and its officers are men of broad experience in their chosen profession, enjoying the esteem and confidence of their patrons for conservatism

G. F. EMERY, *Assistant Cashier.*W. F. DOGGETT, *Assistant Cashier.*

and prudence in handling commissions of trust. The bank is aggressive for new business and the prompt manner in which it is cared for insures the retention of those customers who appreciate mod-

ern business methods rightly employed.

The officers are: S. R. Flynn, President; G. A. Ryther, Cashier; G. F. Emery, Assistant Cashier and W. F. Doggett, Assistant Cashier.

MERCHANTS' LOAN AND TRUST COMPANY.

The capital of The Merchants' Loan and Trust Company of Chicago was increased to \$3,000,000 on July 1. At the same time the surplus was increased to \$3,000,000, as stockholders paid for the new stock at \$200 per share. This step makes the total liability, as a protection of depositors, \$9,000,000.

These changes in the bank's position were made necessary by its great growth in business. No addition had been made to the bank's capital since 1882, when it was increased from \$1,500,000 to \$2,000,000. In the interval its greatest growth has come. In 1882 its average deposits were \$6,094,000. At the present time they are above \$36,000,000, and at one time this year were well over \$37,000,000.

The management of the Merchants' Loan and Trust Company has always believed in the policy of a strong capital. When the bank was started in 1857 the capital was \$500,000. In 1867 it was made \$1,000,000, and in 1872 it was increased to \$1,500,000.

Through the perfection of organization which years of experience and wisdom in management make possible, The Merchants' Loan and Trust Company now furnishes every service that can justly be required of a bank. Its equipment is thorough and its management able. There are few institutions of its kind in the country which have so good a record for conservative yet enlightened management. It is the oldest bank in Chicago, and the fact that it has been so conducted as to maintain its splendid

reputation through the period of its existence—nearly half a century—is an asset whose value cannot be overestimated.

It is perhaps not generally known that the Merchants' Loan and Trust Com-

MERCHANTS' LOAN AND TRUST BUILDING,
Northwest Corner Adams and Clark streets, Chicago.

pany has larger country deposits than any other State bank in Chicago. Its outside business is growing steadily, as it has the best facilities for the care of country accounts and is able to furnish them on favorable terms.

ORSON SMITH, *President.*

The trust department of The Merchants' Loan and Trust Company has been in existence only three years, but the bank is acting in many capacities through it. It has relieved many individuals and corporations of important and trying responsibilities. A well-organized and conducted trust company, as our readers know, can render valuable service to a community. It can safely manage the property of an individual during his life, and wisely administer his estate after his death. Because of its many competent officers and directors, it applies greater wisdom in these matters than one individual possesses.

Through the bond department, The Merchants' Loan and Trust Company buys and sells, after careful investigation, the securities of steam railroads and other properties. It offers for sale only such issues as it is prepared to recommend to its customers. Its own money is invested before these securities are offered, and it must necessarily use the best judgment which time and experience have developed.

The foreign department of The Mer-

chants' Loan and Trust Company is prepared at all times to make cable transfers of money to all the leading cities of the world, and to issue letters of credit for travellers, either abroad or at home. All other features of the foreign exchange business are conducted in this department.

The bank's safe deposit vaults are located in the basement of its building and are reached by an elevator from the banking floor. The vast vault which contains them is the strongest ever built in Chicago and furnishes undoubted security against mobs, fire, and burglars.

The bank's newest department, but one which has already made its need and importance felt, is that devoted to savings. Started February 24, 1902, it now has deposits of over \$3,200,000, and is destined to be an important feature in the future history of the institution.

The bank's officers are as follows: Orson Smith, President; E. D. Hulbert, Vice-President; J. G. Orchard, Cashier; F. N. Wilder, Assistant Cashier; F. G. Nelson, Assistant Cashier; P. C. Peterson, Assistant Cashier and Manager foreign exchange department; Leon L.

E. D. HULBERT, *Vice-President.*

Loehr, Secretary trust department; John E. Blunt, Jr., Manager bond department.

The board of directors, which comprises some of the best-known men in the business world in the country, is as follows: Marshall Field, Albert Keep, A. H. Burley, Elias T. Watkins, Enos M. Barton, E. D. Hulbert, Cyrus H. McCormick, Lambert Tree, Erskine M. Phelps, Moses J. Wentworth, E. H. Gary, Orson Smith.

To become more intimate with the character of the management of the Merchants' Loan and Trust Company is to know that its future development will be won along the same careful yet enterprising lines on which its past successes have been founded.

THE EQUITABLE TRUST COMPANY.

The most important consideration in a matter involving the management and distribution of an estate is the selection of a suitable executor or trustee.

A quarter of a century ago the choice fell upon an individual in whose judgment and uprightness confidence was reposed. To-day the trust company is the generally recognized and logical successor to the individual trustee in the management of estates and funds not invested in active enterprises.

The advantages of a corporation like The Equitable Trust Company over an individual as a trustee are many and important. The corporation has practically a perpetual existence, and can manage any trust, however long its term. It has a fixed place of business, where it can at all times be found, and where books and important papers can be safely kept and examined at will. Its books of account are kept by competent accountants under approved systems and constitute a perfect record of every transaction, and are always preserved. Its capital is liable for the faithful execution of every trust. This responsibility, involving as it does the personal interests of its stockholders, insures watchfulness and absolute fidel-

ity in all matters which the corporation has in charge; and the advice and control of directors, selected with reference to their experience and knowledge of such matters, greatly diminish the possibilities of errors in judgment.

Under the law, all the investments and transactions of trust companies in the State of Illinois are under the supervision and scrutiny of the Auditor of Public Accounts, who is authorized by the State to make examinations at any time, and without warning.

In the selection of a corporation as trustee a prudent person would naturally ascertain whether, under the law, it has ample powers and is under proper restrictions; whether its charter and by-laws compel it to place its funds in the safest investments known to the courts and the business community; whether it avoids the dangers of common banking and the loaning of money on the personal credit of borrowers; whether it is restricted from speculation of every nature, and confined strictly to a fiduciary business; whether its officers and directors are capable and honest; whether its business is transacted under the direction of safe legal counsel.

The officers and directors of The Equitable Trust Company believe that it meets all these requirements and that it supplies a public necessity. The law under which it is organized is most liberal, and gives it, as trustee, power to hold, lease, improve, buy, sell and convey both real and personal property of every kind. Its regulations for the careful home investment of its own funds, and of its trust funds, guarantee its patrons against any loss which is avoidable by human foresight, and afford a financial agency in whose care every trust will be safely and prudently administered. It is prepared to transact fiduciary business, whether the transactions be large or small; for the wealthy or for those of moderate means; for widows and orphans, or for large corporations, excluding all business not incidental to its objects. It has complied with the law by depositing with the Auditor of

Illinois \$200,000 in approved securities, which amount, in connection with the capital and surplus of the company, is an additional guaranty that the trusts given in its charge will be administered faithfully.

The business of this company is confined *exclusively* to the administration of trusts; and it is probably the only trust company in the country which does not, in connection with the trust business, do either a title or banking business. Charters, similar in purpose, have been granted other corporations, but all such corporations, it is believed, have devoted their efforts to ordinary banking business, or dealing in real estate securities bearing their guaranty, to the neglect of the execution of trusts.

The company accepts and executes trusts of every description, under appointment by will, assignment, deed or otherwise. Executors, administrators, trustees, guardians and other fiduciaries, whose bonds, as required by law, are burdensome, can have such bonds reduced by depositing with this company the personal assets in their hands. The company invites interviews with persons contemplating the creation of trusts, in order that it may explain its advantages and terms, and that it may indicate the best manner of accomplishing the objects intended. The commissions charged are moderate and may be made the subject of agreement. Each trust fund is kept entirely distinct from and independent of all others, and separate from the assets of the company.

The company is prepared to make for its clients investments in real estate in and about Chicago, or in bonds, mortgages, stocks or other securities. It has for sale, at all times, choice mortgages on improved Chicago property and bonds of local and other corporations. Loans are made only after careful investigation of the titles, the values of the securities and the responsibility of the borrowers.

The company makes loans on improved real estate in the city of Chicago or on cash collaterals. It purchases ground rents, makes advances on ground rents

and other fixed incomes. No loans are made on personal securities. The company receives trust funds, repayable on demand subject to check. It also receives trust funds for which it issues its certificates of deposit, repayable on notice or at a fixed date. It also receives, on permanent deposit, for investment or reinvestment, such funds, securities or property as may be entrusted to it, agreeing to pay to such person or persons as may be indicated such annual, or more frequent sums, in the nature of annuities, as may be agreed upon with the person making the deposit. In this way a sure and fixed income may be secured for minors until the attainment of their majority, or for married women, or aged and infirm persons during their lifetime, while the principal, after the termination of the trust, can be disposed of as desired by the person who created the trust.

That The Equitable Trust Company is fitted to satisfactorily discharge the functions conferred upon it by law is witnessed by the record made, and is further assured by the company's capital of \$500,000, surplus of \$275,000, and the management, composed of the following well-known officers and directors:

Officers: J. R. Walsh, President; L. A. Walton, Vice-President; C. D. Organ, Secretary and Treasurer; C. Huntoon, Assistant Secretary and Assistant Treasurer.

Directors: William Best, F. M. Blount, Maurice Rosenfeld, Andrew McNally, John M. Smyth, J. R. Walsh, L. A. Walton.

BANKERS NATIONAL BANK.

The Bankers National Bank, of Chicago, of which Hon. Edward S. Lacey, an Ex-Comptroller of the Currency, is the head, opened for business in August, 1892, with a capital of \$1,000,000, which has since been increased to \$2,000,000, so that its capital and surplus are now nearly \$3,000,000, while its deposits exceed \$14,000,000.

It is in one sense such a bank as its name signifies—that is, while taking

J. C. CRAFT, *Vice-President.*

F. P. JUDSON, *Cashier.*

EDWARD S. LACEY, *President.*

CHARLES EWING, *Assistant Cashier.*

CHARLES C. WILLSON, *Assistant Cashier.*

OFFICERS OF THE BANKERS NATIONAL BANK OF CHICAGO.

good care of its large and constantly-growing city clientele, it makes a specialty of the accounts of banks and bankers, and the steady increase in the number of its correspondents evidences the fact that its system of handling such business is highly acceptable to its many friends. While the bank is conducted upon conservative lines, yet the management always aims to grant its customers every accommodation warranted by sound banking principles, and is indefatigable in its search for new facilities to extend to its correspondents.

Mr. Lacey began his career as a banker at Charlotte, Mich., occupying successively the positions of Cashier and President of the First National Bank, of that place, where he resided for many years. He spent four years in Congress and later on was appointed Comptroller of the Currency under Harrison's Administration in 1889, which office he resigned to associate himself with the late David B. Dewey and others for the purpose of organizing the Bankers National Bank, of Chicago. He has been President of the Chicago Clearing-House Association, and Bankers' Club, is a member of the Union League and Glen View Clubs, and resides at Evanston, Ill.

John C. Craft, the Vice President, like Mr. Lacey, had long experience in country banking prior to coming to Chicago. He was for years connected with the Rochelle National Bank, of Rochelle, Ill., resigning his position there as Cashier to become Acting Assistant Treasurer of the United States at Chicago, later accepting the Assistant Cashiership of the Bankers National. He is also a member of the Union League and Bankers Clubs, and as well as Mr. Lacey is quite a golf enthusiast, and is frequently seen on the links of the Homewood Country Club. Mr. Craft resides in Hyde Park.

Frank P. Judson, the Cashier, has also been identified with the bank since its organization, having formerly been connected with the old American Exchange National Bank, of which Mr. Dewey was for several years the President. Mr.

Judson is particularly well known to bankers, in that he has for several years been unanimously chosen Secretary of the Bankers' Association of the State of Illinois. He is thoroughly posted in all the details of bank operations. He resides at Evanston.

Charles C. Willson, Assistant Cashier, gained his first experience at Tallula, Illinois, where his father was a banker for many years. Upon the organization of the Bankers National Bank he became its note teller and was for several years its paying teller, and in January, 1903, was elected Assistant Cashier, a well-deserved promotion.

Charles Ewing was brought up in a bank at Springfield, Mo., coming to Chicago in 1893, and was employed by the Bankers National Bank for several years, until he was called to Iron Mountain, Mich., to accept the Cashiership of the First National Bank, of that place, the business of which grew rapidly under his supervision. Returning to Chicago, at the end of four years, he again associated himself with the Bankers National Bank, of which he became chief clerk, being elected Assistant Cashier in September last.

The institution originally opened in the Masonic Temple but soon outgrew its quarters there, and for several years past has occupied its present central location in the Marquette Building, corner Dearborn and Adams streets, opposite the new Chicago Post Office.

Its list of directors and stockholders embraces many prominent business men and bankers throughout the country and it is looked upon as one of the progressive financial institutions of Chicago.

MASON, LEWIS & COMPANY.

This firm has built up an excellent reputation as investment bankers, and as a result their business is growing most satisfactorily. By specializing investigation in the several departments expert knowledge has been brought to bear upon the various classes of securities

seeking a market, and the firm's judgment has come to be recognized as being as near to absolute accuracy as human foresight can attain.

With offices at Chicago, Boston and Philadelphia, Messrs. Mason, Lewis & Co. are in close touch with the principal financial markets, and with their thorough equipment are able to furnish

expert and reliable information to banks, Savings institutions and other investors relating to municipal, gas, electric light, railway and other bonds and stocks.

Dealing in the higher class of securities only, the firm may be consulted with advantage by those having money to place where safety and a fair yield are desired.

BOSTON.

PROVIDENT SECURITIES AND BANKING COMPANY.

This company opened for business February 16, 1903. It is chartered under the laws of South Dakota and has an authorized capital of \$1,500,000.

The business of the company is divided into three departments—commercial, auxiliary and securities. This enables it to conduct a regular commercial and home deposit business and also affords facilities for handling investments and financing industrial and other enterprises. This company is legally subject to and solicits examination by the Savings Banks Commissioners of Massachusetts. At this writing it has some 22,000 accounts, showing the enterprise, popularity and rapid development of the company.

The officers of the Provident Securities and Banking Company are: President, Gen. Samuel Dalton, Adjutant-General of Massachusetts; Vice-President, Sidney M. Hedges, General Manager in Massachusetts for the Mutual Benefit Life Insurance Co. of New Jersey; Secretary and Treasurer, Lorenzo W. Burlen, for twelve years

Cashier of the Columbian National Bank, Boston, and late with the National Bank

L. W. BURLIN, *Secretary and Treasurer.*

of the Republic, Boston. A portrait of Mr. Burlen, from a photograph taken when he was President of the Bank Officers' Association of Boston, is presented above.

MISSISSIPPI VALLEY TRUST COMPANY'S BUILDING.

ST. LOUIS.

MISSISSIPPI VALLEY TRUST COMPANY.

Coping with the difficulties incident in the course of a long financial career, the Mississippi Valley Trust Company, St. Louis, has never faltered in its upward trend. Commencing business during a period just prior to one of the greatest financial panics in the history of the United States, this trust company has

creased on account of earnings of the company after payment of annual dividends ranging from six per cent, immediately after organization, to sixteen per cent. at the present time.

The following comparative statement will evidence the growth of the company during recent years :

DATE.	Capital.	Surplus and profits.	Deposits.	Resources.
December, 1898.....	\$1,300,000	\$811,063	\$3,927,167	\$6,577,454
" 1899.....	1,500,000	1,075,681	7,759,412	11,913,413
" 1900.....	3,000,000	3,823,218	14,178,131	21,240,864
June, 1901.....	3,400,000	4,013,624	19,155,599	26,356,240
February, 1903.....	3,000,000	5,150,778	23,269,550	31,530,965

made steady progress and to-day stands as a monument of solidity and strength in the financial world, and at the head of the list of trust companies in St. Louis. The paid-in capital of the company at its commencement of business in 1891 was \$750,000, with no surplus, and now the capital, surplus and profits of the company amount to \$8,200,000, several million dollars of which represent net in-

The rapid growth of the company has compelled its occupancy of the entire building at the Northwest corner of Fourth and Pine streets, and even then its palatial offices now occupy all the available floor space, thus making the actual square feet used as great, if not greater, than that of any other financial institution in the city.

Always ready to assist in the advance-

JULIUS S. WALSH, *President.*

**BRECKINRIDGE JONES, *1st Vice-President
and Counsel.***

JOHN D. DAVIS, *2nd Vice-President.*

ment of worthy projects, the Mississippi Valley Trust Company stands foremost in the territory west of the Mississippi River as a promoter and upbuilder of beneficial enterprises.

Several large concerns of recent date owe their existence to the Mississippi Valley Trust Company, the most prominent of which are the Kinloch Telephone Company, Kinloch Long Distance Telephone Co., Blackwell, Enid & Southwestern Railway Co., Denver, Enid & Gulf Railway Co., Arkansas Southern R. R. Co., Bes Line Construction Co., Tennessee Central Railroad Co., Union Electric Light & Power Co. and National Candy Co. The floating of bond issues of \$10,000,000 Mexican Central Railway collateral trust 4½'s, \$7,500,000 St. Louis & Suburban Railway consolidated 5's and the recent \$4,000,000 Union Electric Light & Power Co. 5's, indicate the scope of influence and magnitude of its operations.

The acquirement for others of controlling interest in the Laclede Gas Light Co. and the Missouri-Edison Electric Co., the ultimate intention being to consolidate the latter company with the Union Electric Light & Power Co., shows the size of some of this trust company's most recent negotiations, and the strength of its allied interests. This trust company has also handled some of the largest trusts existing west of New York city. Its trust or fiduciary department stands unexcelled in facilities for the careful execution of all matters intrusted to its charge and is especially adapted to trust estates under wills or mortgages by railroads and other corporations.

By steady application to business its able and courteous officers and directors have built up the immense business now enjoyed. The company issues its own letters of credit available throughout the world, and has several unique features in this connection for convenience of tourists holding its credits. It was the first institution west of the Mississippi River to inaugurate such a system. The company has special facilities for handling inter-State and foreign business, and deals extensively in foreign and domestic

exchange. Its method of depositing by mail for the especial convenience of out-of-town savings depositors is modern in every respect.

Each department is under the immediate management of a capable corps of officers.

The company transacts a general trust company business; is authorized by law to act as executor, administrator, trustee, etc.; buys and sells high-grade investment securities; allows interest on checking and time deposits of individuals, firms and corporations; manages, sells, rents and appraises St. Louis city property and rents safe-deposit boxes in fire, burglar and mob-proof vault.

The following gentlemen of long experience and proven ability are officers of the company:

Julius S. Walsh, President; Breckinridge Jones, 1st Vice President and Counsel; John D. Davis, 2d Vice-President; Samuel E. Hoffman, 3rd Vice-President; James E. Brock, Secretary; Hugh R. Lyle, Assistant Secretary; Henry C. Ibbotson, 2d Assistant Secretary; W. Daviess Pittman, Bond Officer; Frederick Vierling, Trust Officer; Henry Semple Ames, Assistant Trust Officer; Wm. G. Lackey, Assistant Trust Officer; Eugene H. Benoist, Real Estate Officer, and Wilbur B. Price, Safe Deposit Officer.

The entire business of the company is managed by a conservative yet progressive executive committee directly under a board of directors, composed of gentlemen of the highest standing in the financial and commercial world, as the following list will indicate:

Elmer B. Adams, U. S. District Judge; Williamson Bacon, President Tyler Estate; Murray Carleton, President Carleton Dry Goods Co.; Charles Clark, retired; John D. Davis, 2d Vice-President; Harrison I. Drummond, President Drummond Realty and Investment Co.; Auguste B. Ewing, retired; David R. Francis, President D. R. Francis & Bro. Commission Co.; August Gehner, President German-American Bank; Geo. H. Goddard, retired; Samuel E. Hoffman, 3rd Vice President; Charles H. Huttig,

President Third National Bank; Breckinridge Jones, 1st Vice-President and Counsel; Wm. F. Nolker, Treasurer St. Louis Brewing Association; Wm. D. Orthwein, President Wm. D. Orthwein Grain Co.; H. Clay Pierce, President

Waters-Pierce Oil Co.; Joseph Ramsey, Jr., President Wabash Railroad Co.; Moses Rumsey, President L. M. Rumsey Manufacturing Co.; Julius S. Walsh, President; Rolla Wells, Mayor of City of St. Louis.

PITTSBURG.

UNION TRUST COMPANY.

A little over thirteen years ago the Union Trust Company was founded as the Union Transfer and Trust Company, with \$250,000 capital.

A striking illustration of the wonderful growth of the Union Trust Company may be shown in the fact that at the time of its organization the total deposits of the twenty-five National Banks in Pittsburg were \$38,452,522; now the total deposits of the Union Trust Company and the Mellon National Bank more than equal this grand total. The total capital and surplus of the National banks then was a little over \$17,000,000 and to-day that amount is less than the combined capital and surplus of the Union Trust Company.

In the short space of thirteen years the Union Trust Company has grown from a promising infant to a financial giant, comprising with its allied interests the most powerful and influential institution between New York and Chicago. It has a capital of \$1,500,000 and surplus and undivided profits of \$16,000,000. Its total deposits are over \$20,000,000 and it owns in addition the Mellon National Bank with \$2,000,000 capital and \$200,000 surplus and \$20,000,000 deposits, as well as the Union Savings Bank with \$1,000,000 capital and \$2,800,000 deposits. The following figures show the growth of its deposits from the time of its organization:

Dec. 31.	Deposits.	Dec. 31.	Deposits.
1890.....		1897.....	\$406,214.14
1891.....	\$4,500.00	1898.....	513,857.33
1892.....	34,525.00	1899.....	5,130,908.88
1893.....	22,000.00	1900.....	7,630,137.02
1894.....	33,182.00	1901.....	17,194,170.00
1895.....	65,522.56	1902.....	19,846,900.00
1896.....	200,681.84		

The growth of the Union Trust Company has not been sudden or spasmodic, but continuous and substantial. Former Postmaster James S. McKean was President for many years succeeding A. W. Mellon, the company's first President, and upon his death in 1899 H. C. McEldowney was elected in his place and has carried out the policy and plans of the company in a remarkably successful manner. The present home of the company at 335-7-9 Fourth avenue is one of the most commodious, convenient and palatial banking houses in Pittsburg.

The Union Trust Company has contributed its share towards making Pittsburg independent of Eastern capital and creating in Western Pennsylvania a financial metropolis. Associated with it in this work have been many of the men who have made Pittsburg notable in a financial and industrial way. The officers and directors are as follows:

Officers—H. C. McEldowney, President; A. W. Mellon, Vice-President; J. M. Schoonmaker, 2d Vice-President; H. W. Gleffer, Assistant to the President, and Treasurer; Scott Hayes, Secretary; James S. Carr, Assistant Treasurer; J. H. Evans, Assistant Secretary; Wm. Wylie Smith, 2d Assistant Secretary; Wm. I. Berryman, Trust Officer; Reed, Smith, Shaw and Beal, Solicitors.

Directors—H. C. McEldowney, A. W. Mellon, James McCrea, J. M. Schoonmaker, F. J. Hearne, W. N. Frew, D. E. Park, H. C. Frick, P. C. Knox, Geo. I. Whitney, H. C. Fownes, James H. Lockhart, George E. Shaw, J. B. Finley, Charles Lockhart, James H. Hyde, R. B. Mellon, B. F. Jones, Jr., Wm. B. Schiller, Henry Phipps.

THE FIDELITY TITLE AND TRUST COMPANY.

Beginning business in 1886, in humble quarters at 434 Wood street, the Fidelity, Title and Trust Company has taken a high place among the financial institutions of the nation. It was the second trust company organized in Pittsburg, and the first one to receive deposits. William O. H. Schully was the President, and James T. Armstrong the first Secretary and Treasurer.

In 1887 the company's office was removed to 100 Diamond street, where it occupied a small room about 12 x 15 feet. In 1888 its Fourth avenue property was purchased, and the company's present handsome substantial home was built and occupied in August, 1889.

In 1887 John B. Jackson was elected President, and is still the active head of the company. At the time Mr. Jackson assumed the presidency the total assets of the Fidelity, Title and Trust Company amounted to \$403,895; only \$357,000 of the capital had been paid in, and it was without surplus or earnings of any kind.

It 1890 the capital was increased to \$1,000,000, which was put out at par, and the same year found the company with surplus earnings of nearly \$100,000.

In 1893 it began paying dividends at the rate of six per cent. per annum, which rate it maintained until 1903, when the rate was increased to twelve per cent. At this time the capital was increased to \$2,000,000 and a surplus of \$3,000,000 was created from the sale of the increased stock. The history of the substantial progress of the company is best seen in the appended comparative statement:

Probably the most significant feature of the showing is the gradual rise of the surplus earnings. After paying \$675,000 in dividends the company has accumulated undivided profits amounting to \$1,129,845, all of which has been actually earned. It will be seen by the table, above submitted, that even during the period from 1892 to 1894, which included the year of the great panic, there was a decided gain in the surplus earnings, regardless of the perceptible decline in the volume of deposits.

The year of Mr. Jackson's election to the presidency (1887) also witnessed the election of Chas. B. McVay, Secretary and Treasurer. He held the office until 1893, when he was succeeded by James C. Chaplin as Treasurer, and John McGill as Secretary. In 1901 Mr. Chaplin resigned and Charles E. Willock, the present incumbent, was elected to the position.

The faith of the community in the company is seen in the vast sum intrusted to its keeping, in the shape of trust funds, represented by available securities and cash. In addition to its custody of \$32,000,000 in funds of that character, and the liabilities of its general department of \$11,700,000, it is also trustee under mortgage for the colossal amount of \$59,371,000.

The faithful stewardship of such a vast volume of wealth justly confers upon the institution the undisputed right to the title of Fidelity, Title and Trust Company.

The scope of the company's business embraces a general money department, taking deposits subject to check and as savings accounts; trust business in its broadest sense, and a safe-deposit or vault department.

Year.	Surp. Earnings.	Deposits.	Assets.	Trust Funds.
October, 1890.....	\$96,532	\$1,083,000	\$1,712,718	\$2,849,043
" 1892.....	218,571	1,162,000	2,467,257	7,753,205
" 1894.....	251,817	907,544	2,203,204	9,462,373
" 1896.....	331,513	1,311,199	2,663,459	12,949,382
" 1898.....	437,288	2,282,068	3,754,826	19,017,662
" 1900.....	661,464	4,384,100	6,085,254	24,239,975
" 1901.....	846,892	5,230,369	7,198,829	26,666,867
" 1902.....	1,044,306	6,936,899	9,091,968	28,745,596
May, 1903.....	1,129,845	7,042,058	11,794,712	32,449,369

The general or banking department, which occupies the first floor of its building, pays interest on all deposits, buys and sells exchange, lends money on real estate and collateral security, acts as reserve agent for other financial institutions, and acts as transfer agent for corporations issuing stocks and bonds.

The trust department occupies all of the second floor of its building, and executes trusts of every description, acts as executor, administrator, guardian, receiver and financial agent.

The safe-deposit vault, in the rear of the banking room, on the first floor, is the most substantially constructed of its kind in Pittsburg, and is 17 x 29 feet, containing 1,600 boxes at present, and has a capacity for many more, and is

equipped with every modern convenience.

The officers and directors of the company are as follows: John B. Jackson, President; Jas. J. Donnell, Vice-President; Robert Pitcairn, Vice-President; C. E. Willock, Treasurer; John McGill, Secretary; Jos. A. Knox, Assistant Secretary and Treasurer; C. S. Gray, Trust Officer; A. F. Benkart, Assistant Trust Officer; Thomas R. Robinson, Auditor.

Directors—John B. Jackson, Albert H. Childs, James J. Donnell, E. M. Ferguson, Reuben Miller, Robert Pitcairn, Frank Semple, James H. Reed, Charles E. Speer, H. S. A. Stewart, Edward T. Dravo, John Walker, John R. McGinley, C. S. Gray, J. Levering Jones.

DENVER, COLO.

FIRST NATIONAL BANK.

Few banks in the country are better known or stand higher than the First National Bank, of Denver. It is one of the large and strong banks of the United States, probably having a larger volume of business than any other bank located in a city of similar size. Its deposits exceed those of any commercial bank between St. Louis and San Francisco, with a single exception. The bank is growing very rapidly too, as may be seen from the following statement, showing the deposits on the dates named:

JULY.	Comparative deposits.
1893.....	\$3,359,467.37
1894.....	5,295,810.44
1895.....	6,527,210.50
1896.....	8,893,143.85
1897.....	9,942,283.62
1898.....	12,524,904.88
1899.....	17,154,998.00
1900.....	18,049,080.80
1901.....	19,087,905.72
1902.....	21,458,060.73
1903.....	21,497,715.85

This is a record of growth which strikingly attests the vigorous management of the bank and its capacity to

supply an important share of the banking facilities of Denver and the surrounding territory. Of course, the management of any bank is the chief factor in determining the measure of its success, and in this respect the First National Bank is in an exceptionally strong position. David H. Moffat, the President, is one of the wealthiest men of the West and a man who has shown by results that he is thoroughly competent to carry through large financial affairs to a successful issue. He has been one of the leading factors in building up the transportation, mining and other productive industries of the State of Colorado. In the construction and conduct of railway enterprises he has been remarkably successful, and only recently took up the plan for constructing a line from Denver to Salt Lake City—an undertaking which he is prosecuting with characteristic energy.

Mr. Moffat was born in Orange county, N. Y., in 1839. At the age of twelve years he went to New York and secured employment as messenger in a bank, and after four years became assistant teller. He then went to Des Moines, Iowa, as teller in a bank, and was also Cashier of

a bank in Omaha for three years. In 1860 he went to Denver and engaged in selling books and stationery. In 1867 he was elected Cashier of the First National Bank and has been President since 1880. Mr. Moffat is largely interested in railway and other enterprises and is a director of the Equitable Life Assurance Co., and the Fourth National and Western National Bank, of New York. He is a millionaire several times over—a position he has attained by hard work, grit, ability and the capacity of making and keeping staunch and loyal friends.

The First National Bank has reason to be proud of its record. In the panic of

1893, when bank failures were numerous in Denver and elsewhere, the bank stood as firm as a rock and was able by its strong condition to extend aid to its depositors, instead of contracting loans.

W. S. Cheesman and Thomas Keely are Vice-Presidents of the bank; F. G. Moffat is Cashier and W. C. Thomas and C. S. Haughwout are Assistant Cashiers.

The capital of the First National Bank, of Denver, is \$1,000,000 and the surplus and profits over \$1,000,000. Both in resources and equipment the bank is thoroughly suited to the transaction of all kinds of legitimate commercial banking.

MILWAUKEE, WIS.

FIRST NATIONAL BANK.

Founded in 1853 as the Farmers and Millers' Bank, and converted into the First National Bank in 1863, this institu-

F. G. BIGELOW, President.

tion ranks among the oldest banks of the Northwest, and was the first National bank organized in Wisconsin and the

sixty-fourth in the United States. The Cashier up to the reorganization of the bank in 1882, when its original charter as a National bank expired, was H. H. Camp, one of the oldest and best-known bankers in the State. Mr. Camp was elected President in 1882, and held that office until 1893, when after forty years of continual service in the banking business, he retired and was succeeded by F. G. Bigelow.

In 1894 the First National Bank absorbed the Merchants' Exchange Bank.

Throughout its long and successful history the First National Bank, of Milwaukee, has been strong in public esteem. Panics have never shaken it, nor has it failed to keep fully up with the demands of progressive banking. Its business has grown steadily and to large proportions and its strength has been at all times adequate to meet all the requirements of safe commercial banking.

Frank G. Bigelow, President of the First National Bank, of Milwaukee, has shown himself to be a capable executive officer, the business of the bank having made substantial gains under his management. Mr. Bigelow has been honored by being chosen chairman of the executive council of the American Bank-

ers' Association, and is now first vice-president of the association.

The other officers of the bank are:

Vice-President, Wm. Bigelow ; Cashier, Frank J. Kipp; Assistant Cashiers, T. E. Camp and H. G. Goll.

BALTIMORE.

FIRST NATIONAL BANK.

The First National Bank of Baltimore was organized in November, 1863, and became a National bank February 28,

1864, being the first in the State to enter the National system. Recently the bank renewed its charter, thus beginning the third period of twenty years as a National bank.

FIRST NATIONAL BANK BUILDING.

From the time it commenced business, March 1, 1864, the bank has prospered and has grown continually until to day it is one of the strong banks of the State.

The first board of directors was composed of John Hopkins, Thomas Swann, Columbus O'Donnell, John Clark, Thomas Kelso, Benjamin Beford, William J. Albert, Horace Abbott and William E. Hooper. The bank commenced business with Thomas Swann as President and J. Saurin Norris as Cashier. In 1866 Governor Swann was succeeded by Columbus O'Donnell, who was President until his death in 1873. J. Saurin Norris succeeded him, and in 1887 Capt. John Hall was elected President and served until 1900. In May of that year the Equitable National Bank purchased the stock of the First National, and the two banks were merged under the name and charter of the First National. Major J. D. Ferguson retained the presidency, having been President of the Equitable, and H. B.

Wilcox the cashiership. Previously the capital of the First National had been cut in half, to \$555,000, but about a year ago it was increased to the present capital of \$1,000,000. The surplus is \$350,000. Deposits amount to \$4,500,000.

Since the present management acquired the bank, then in view of its rapidly increasing business, the building in the rear and extending back to Holliday street has been purchased, so as to give the opportunity of extending the banking house.

The First National Bank is a depository of the United States, State of Maryland and Baltimore City. It has a strong local board of directors, representative of Baltimore's leading commercial and financial interests. James H. Eckels, President of the Commercial National Bank, Chicago, and former Comptroller of the Currency, and James T. Woodward, President of the Hanover National Bank, New York, are also directors.

SAN FRANCISCO, CAL.

CENTRAL TRUST COMPANY.

This is a young but vigorous institution, having been organized January 29, 1903. Its position is clearly a strong one, the capital being \$1,500,000, surplus \$225,000, and deposits over \$2,500,000.

The charter of the company grants ample powers for the transaction of a banking and trust company business, while the supervision both of the Bank Commissioners and the management imposes the safeguards necessary for the protection of depositors and stockholders.

The company offers in its fiduciary business the advantages of an experienced and able management, thoroughly fitted to administer trusts of every description and to make prudent and remunerative investment of the funds entrusted to the company.

In the banking department both local

and out-of-town accounts are well cared for, and the organization is so complete as to make this institution in all respects equal to the best and most progressive of modern banks. Some of the features which have commended the company to the public confidence are the large capital and surplus and the well known capability of its officers. It is the aim of the company to give the strictest attention to the interests of its depositors and clients, and to earn the approval of those who exercise careful judgment in selecting a depository for their funds or a company to act as administrator, executor, trustee, etc.

The utmost liberality consistent with absolute safety is extended to borrowers engaged in sound business enterprises, and those in charge of important undertakings are afforded the facilities which only a corporation of large capital can

grant. Its trust company powers also enable the company to be more serviceable to its customers than if it were narrowly restricted to the functions which National and other banks may perform.

The officers of the Central Trust Company are: President, Frank J. Symmes; Vice-President, A. Poniatowski; Cashier, H. Brunner; Assistant Cashiers, R. T. Crist and J. C. Rued.

CALIFORNIA SAFE DEPOSIT AND TRUST COMPANY.

Measured by its growth, which is a good standard by which to judge of the management of an institution, the California Safe Deposit and Trust Co., of San Francisco, has been remarkably successful. This is shown by the following comparative statement of total deposits on the dates named:

	Total deposits.
January 1, 1883	\$91,000
January 1, 1893	1,155,000
January 1, 1903	5,128,000
July 1, 1903	5,464,000

The company is well equipped in its various departments for handling the business entrusted to it. In the several branches of its business the company offers facilities which enable it to fully meet the wants of its customers.

The trust company department is prepared to discharge all those functions which it is now recognized can be done so much better than by individuals acting in the same capacities, and the California Safe Deposit and Trust Co. has

established a fine reputation for care and skill in handling estates and investments.

Every description of banking is also carried on, both commercial and savings, and ample and strongly-built vaults give safe protection to money, securities and other property committed to the company's care.

The high position which the company has reached is indicated by the following condensed financial statement of July 1, 1903:

RESOURCES.

Real estate (safe deposit bld'g)....	\$700,000.00
Safe deposit vaults and fixtures.....	130,553.89
Other real estate.....	111,220.16
Interest accrued but not yet due.....	25,630.90
Time loans.....	1,753,481.70
Demand loans.....	\$1,832,264.59
Stock and bonds.....	1,294,739.06
Cash.....	932,799.80
Total.....	\$6,783,690.10

LIABILITIES.

Capital stock.....	\$1,000,000.00
Surplus and profits.....	316,031.27
Dividends unpaid.....	138.00
Time deposits.....	\$2,926,103.86
Demand deposits.....	2,538,416.97
Total.....	\$6,780,690.10

As will be seen by the above statement it is the aim of the company to keep in a strong position, and this policy has been instrumental in gaining and keeping the confidence of the public. The wise and capable management of the company assures a continuance of that success which has marked the past twenty years of the company's history.

UNION PACIFIC RAILWAY.

Bankers attending the San Francisco convention, as well as others who may travel in the West or Northwest at any time, will find the Union Pacific Railway a direct and pleasant route by which to reach all prominent Pacific Coast cities and the principal intermediate points. The journey to San Francisco may be made either by way of Kansas City and Denver, or Omaha, taking in Salt Lake City and the unapproachable scenery on the way.

The roadbed, equipment and speed all

combine to make a trip over the Union Pacific one of pleasure, while the variety and beauty of the scenery and the many other attractive features which this line affords make it an especial favorite with the traveling public. The service conforms to the best standard of modern railway enterprise, and will appeal strongly to the bankers of the country.

The Union Pacific will doubtless carry large numbers to the convention at San Francisco.

LOS ANGELES, CAL.

AMERICAN NATIONAL BANK.

One of the large banks of Los Angeles is the American National Bank. It came under the National banking system January 1, 1903, succeeding at the time to

W. F. BOTSFORD, *President.*

the business of the California Bank. Its capital is \$1,000,000 fully paid, and it has deposits of \$3,600,000.

Measured by results this institution may be justly called a successful bank, and these results have been secured by strict adherence to the highest principles of business, coupled with energetic and skillful management.

Now that the bank has become qualified to act as reserve agent for other National banks, its deposit accounts are sure to increase even more rapidly than they have in the past.

It will be found that the accounts of correspondents will be looked after most carefully with the view to establishing permanent and mutually profitable rela-

tions, and it will be the aim of those in charge of this special department to keep its facilities up to the highest attainable standard.

The officers of the American National Bank are: President, W. F. Botsford; Vice-Presidents, W. J. Washburn, T. E. Newlin, J. G. Mossin, W. J. Doran; Cashier, T. W. Phelps; Assistant Cashier, C. M. Wood.

The board of directors is composed of such sterling men as W. F. Botsford, H. E. Huntington, M. J. Connell, J. A. Muir, Epes Randolph, Homer Laughlin, W. S. Newhall, T. E. Newlin, Dr. Jno. R. Haynes, W. J. Washburn and H. C.

T. W. PHELPS, *Cashier.*

Witmer. Such a representative board is a guarantee that all business entrusted to the bank's care will be managed satisfactorily.

The remarkable addition made to its accounts in the past few years may be attributed to the energy and discrimination of its management.

SEATTLE, WASHINGTON.

SCANDINAVIAN-AMERICAN
BANK.

The Scandinavian-American Bank celebrated its eleventh anniversary on April

ANDREW CHILBERG, *President.*

27. Its paid-up capital is \$300,000 and its surplus \$150,000, a total of \$450,000, besides the undivided earnings which amounted to \$34,459 on May 29, 1903. For some time the business of the bank had demanded a larger capital, and realizing this, the directors voted the increase at the annual meeting held in January last. A remarkable incident of this transaction is the fact that this two thousand additional shares was sold at a profit of \$75 per share, and the total of \$150,000 was set aside as a surplus.

The Scandinavian-American Bank has been in existence eleven years, and in that time it has grown from small beginnings to a place in the ranks of the strongest financial institutions in the

State. Even though its deposits under its present capitalization should ultimately reach \$5,000,000, it can readily be seen that it would offer equal protection to its depositors with any other bank or banks in the State.

The statement of the Scandinavian-American Bank under this new expansion was on May 1, 1903, given as follows:

Capital paid up.....	\$300,000
Stockholders' liability.....	300,000
Surplus and profits.....	175,000
Total.....	\$775,000

The men who organized this bank in the early nineties were successful men at that time. The head of the bank then is still at the head of the management to-day. Mr. Andrew Chilberg's career as a financier and as the executive officer of the bank has been pronounced. The

A. H. SOELBERG, *Vice-President.*

late A. Amunds, its Vice-President at the time of organization, was noted as a successful and very conservative business man. W. H. Talbott was the bank's first Cashier.

To the careful business tact of these men in its early days is due much of the

demand paper, besides county and city warrants to the amount of nearly \$100,000.

The board of directors of the bank number seven, all of whom are active in its management and noted for a wise and conservative policy. This number will soon be increased to nine members, and possibly eleven, in order to make room for representatives of California and Eastern capitalists who have acquired a considerable block of the new stock.

The growing business and commercial interests of the city of Ballard demanding banking facilities nearer than Seattle, the Scandinavian-American Bank in February last opened a branch institution in that place. This branch is under the active management of Assistant Cashier Wm. Thaanum, formerly auditor and Assistant Cashier of the Washington National Bank, of Seattle. Since that time Ballard's mill interests and other business have been accommodated with ample banking facilities.

The present officers of the Scandinavian-American Bank are: Andrew Chilberg, President; A. H. Soelberg, Vice-President; J. F. Lane, Cashier, and George R. Fisher, Assistant Cashier.

These men have the active control of the institution and are all thoroughly versed in financial matters. Mr. Chilberg, as was said above, has been at the head of the bank since its organization. Mr. Soelberg has also been with the bank since its organization in 1892, and Mr. Lane entered the bank in 1895. Mr. Fisher was formerly Assistant Cashier of the First National Bank, of Seattle.

That the success which has attended this bank has been due largely to the men who have looked after its business every day, there can be no doubt. This progress can best be shown in a comparative statement of the deposits. From May 31, 1892, to May 31, 1903, the de-

F. W. LANE, Cashier.

success which has since come to it and made the name of the Scandinavian-American Bank one of the best in the State of Washington. Its paid-up capital was at that time, 1892, \$45,000. While its earnings from the beginning were not very large, yet in a few years it had accumulated a surplus larger than its capital. From this surplus its capital has paid fifty per cent. in dividends, besides adding to its surplus.

The policy of the bank has always been a conservative one, as in addition to its large cash reserve, which has not during the last five years been below forty per cent., it has carried and still continues to do so, a large percentage of

posits grew from a little over \$19,000 to over \$2,346,000. A complete statement of the gradual increase of deposits in the Scandinavian-American Bank from its organization to the present time is shown in the following :

<i>May 31,</i>	<i>Deposits.</i>
1892.....	\$19,256.07
1893.....	93,079.67
1894.....	73,539.38
1895.....	117,316.58
1896.....	152,241.16
1897.....	170,594.08
1898.....	421,815.96
1899.....	557,694.44
1900.....	966,989.74
1901.....	1,509,315.92
1902.....	1,757,863.00
1903.....	2,346,329.96

DEXTER HORTON & CO., BANKERS.

So closely has the name of Dexter Horton & Co. been linked with the commercial affairs and development of the City of Seattle and State of Washington,

BANK OF DEXTER HORTON & Co.

that its name is a household synonym of financial strength and conservatism in the Pacific Northwest.

Founded in 1870, it continued business as a private bank until 1887, when it was incorporated as a State bank under Territorial charter, and its powers and influence broadened, and such names as A. A. Denny, Dexter Horton and J. R. Lewis, of Seattle, C. W. Moore, of Boise, Idaho, and W. S. Ladd and Theo. B. Wilcox, of Portland, all men of high standing and financial strength, were numbered as its stockholders.

It enjoys the distinction of being the oldest bank in Washington, and its ability to serve its customers and the popularity of its policy and management have kept it well in the lead of competitors in volume of business.

Its management from 1870 until 1887 was under Dexter Horton; from 1887 until 1890 under Judge John P. Hoyt, and since 1890 under N. H. Latimer.

Its growth and prosperity are best evidenced by the comparative statements below :

Comparative Statement of Deposits.

<i>DATE.</i>	<i>Deposits.</i>
May 31, 1897.....	\$637,750.02
" 1898.....	1,345,248.41
" 1899.....	1,983,045.97
" 1900.....	2,730,063.34
" 1901.....	3,929,769.17
" 1902.....	4,682,646.86
June 9, 1903.....	5,454,402.79

Its present board of directors are: Dexter Horton, R. H. Denny, W. M. Ladd, M. W. Peterson and N. H. Latimer.

Its active officers are : N. H. Latimer, Manager; M. W. Peterson, Cashier; C. E. Burnside, Assistant Cashier, and G. F. Clark, 2d Assistant Cashier.

It owns its own bank building, constructed in 1892, and so rapid has its growth continued that it is now remodeling its building so as to double its banking room, which, when completed, will be one of the largest and most modern in arrangement on the coast.

PORTLAND, ORE.

FIRST NATIONAL BANK.

This is the oldest National bank on the Pacific Coast, having been organized July 4, 1865, and it is also the largest in the Northwest, its deposits amounting to over \$8,000,000.

Since its organization the First National Bank, of Portland, Oregon, has paid \$3,317,000 in dividends to its stockholders. The bank employs a force of forty-five people to handle its large and growing volume of business.

FIRST NATIONAL BANK.

Hon. H. W. Corbett, formerly United States Senator from Oregon, was for many years President of this bank. On his death, which occurred recently, he was succeeded by A. L. Mills, the Vice-President. J. W. Newkirk is Cashier, W. C. Alvord, Assistant Cashier, and B. F. Stevens, 2d Assistant Cashier.

LADD & TILTON.

It was during the year 1858 that William S. Ladd and Charles E. Tilton inaugurated preparations for the formation of a bank at Portland, Oregon. On June

1, 1859, their arrangements had become perfected and the bank was formally opened for business under the name of Ladd & Tilton, Bankers. This name the bank has retained during its entire forty-four years of existence. It was but three months and eighteen days prior to the date of the opening of the bank that Oregon had been admitted as a State to the Union, and at that time the entire section of country which now includes Oregon, Washington, Idaho, and those portions of Montana and Wyoming west of the Rocky Mountains and north of the forty-second parallel, was generally known to the world as the "Oregon Country."

The present thriving and rapidly-growing city of Portland, with its 125,000 people, was then but little more than a hamlet, and the entire "Oregon Country," with its vast and varied resources, was so sparsely settled and so isolated from the other sections of the United States that it seemed almost like a foreign land to the vast majority of the American people.

The co-partnership between Mr. Ladd and Mr. Tilton continued until 1880, when Mr. Tilton disposed of his interest in the business to Mr. Ladd and retired from the firm, having amassed a large fortune from the profits of the bank, which had steadily increased its capital and surplus and had built up a large and lucrative business.

William S. Ladd was during his lifetime one of the conspicuous figures in the history of Oregon. While essentially an able and conservative banker and devoted to his banking interests, he was a man of endless enterprise and of great moral courage in commercial undertakings. He promoted and participated in many projects of magnitude and importance, which have been factors of substantial value in the development of the commercial interests of the entire Northwest region. At his death, which

LADD AND TILTON BUILDING.

LADD AND TILTON BUILDING—INTERIOR VIEW.

occurred in 1893, he left an estate valued at many millions, the management of which is now vested in his sons, William M., Charles E., and John Wesley. The bank has never been incorporated and still remains a private banking firm. It enjoys the distinction of being the oldest banking-house in existence in the Pacific Northwest and is one of the very few prominent banks on the Pacific Coast which are not organized under either State or National charters. The bank conducts a strictly commercial business, and is a member of the Portland Clearing-House Association.

It enjoys in a high degree the confidence and esteem of the residents of Portland and the entire section of coun-

try tributary to it, and while its business is already very large, each year adds materially to its volume. Its financial strength is indicated by a responsibility amounting to \$5,000,000.

In addition to their extensive interests at Portland, Ladd & Tilton control several prominent banking institutions located in the State of Washington, among which are Dexter Horton & Co., Bankers, Seattle; Pacific National Bank, Tacoma, and Merchants Bank, Port Townsend. They are also identified in a smaller way with a number of other banks and kindred institutions and have very extensive holdings of real estate and other properties throughout the States of Oregon and Washington.

KANSAS CITY, MO.

NATIONAL BANK OF COMMERCE.

If the broad expanse of country, commonly referred to as the "Great Southwest," were an empire, Kansas City would be its logical and undisputed capital. The industrial, mercantile and packing interests, together with the large centralization of railroads which the city holds, have brought its prominence in

these lines to many observers; but its commercial importance is probably less known, for not all of those persons even whose seek to keep in touch with the banking interests of our country likely know that Kansas City possesses the largest bank west of Chicago, and that the city leads in the volume of bank clearings other cities of greater age, larger popula-

MAIN BANKING ROOM.

OFFICERS' APARTMENTS.

tion, and claiming more extended manufacturing and jobbing interests. But this fact was developed by the operation of the same conditions that made possible the other achievements mentioned. Not only is the city the natural market of a vast territory of immensely rich and varied resources, but it is also the financial center of a still greater area.

By force of the natural trend of trade, encouraged by those directing its banking interests, the city has become the commercial and banking clearing-house of the broad territory between the Mississippi River and the Pacific Ocean. Then, if one considers the unparalleled, and, for a considerable period, uninterrupted prosperity of this large territory with its widely diversified interests, the importance of Kansas City as a manufacturing, distributive and financial center may be better understood.

To properly care for and encourage the growth of this large volume of business required adequate banking facilities. These have always been fully provided

by the number of splendid banks of the city, foremost among which, it may be said, stands the National Bank of Commerce. The bank was established under a special act of the Legislature in 1865 as a Savings bank, with a paid-up capital of \$10,000, at which time Kansas City was little more than a trading-post. Sixteen years later found a city of considerable size and business. Dr. W. S. Woods, a successful dry goods merchant, then became President of the bank, which in the following year was reorganized under a new charter as the Bank of Commerce, with \$200,000 paid-up capital. The institution keeping pace, by increase of capital and other facilities, with the growth of business, as the hamlet passed into a village and on to the city of to-day with its manifold large and varied interests and business activities, the bank is found under a National charter (taken in 1887) with a capital of \$1,000,000 and surplus and undivided profits of \$1,550,000.

Prominent in its history of thirty-eight years, and testifying positively to its

notable success, would appear the capacity and fidelity of the management in that, always seeking to serve the best interests of its customers, yet never relaxing the principles of legitimate banking, it has passed without disturbance the several severe financial storms and panics that left wrecks in their course, growing in strength and favor, as is evidenced by its present substantial capital and surplus

Dr. W. S. Woods, President, W. H. Winants, Vice-President, W. A. Rule, Cashier, Chas. H. Moore and F. H. Head, Assistant Cashiers, the present executive force of the bank, are all of many years' practical experience, in which unvarying success has proven their adaptability for their work. These, with a directorate of men long identified with substantial business interests and affairs of the city,

GENERAL VIEW, LADIES' DEPARTMENT.

of two and a half millions of dollars, with the splendid line of thirty-three millions of dollars deposits, giving to it the distinction of being not only the oldest and largest bank in the city, but also the largest in the entire Southwest and West. With active correspondents and connections, not only throughout the entire trade territory of Kansas City, but all other business sections of the world as well, with ample capital and otherwise thorough equipment, its facilities and ability for fully serving its trade are unsurpassed, and give it an exceptionally strong position.

give to the institution an especially strong management.

A better appreciation of the volume and detail of the business flowing daily through the bank may be had by the figures of an ordinary day's transactions, showing that the cash remittances from, and dispatched to, correspondents, aggregated in a round amount \$6,330,000, with clearings on the same day of \$2,575,000, and total deposits of nearly \$5,000,000. To handle this business requires the services of an average of 200 persons.

In January, 1899, a special department for ladies was organized, being the first

WRITING ROOM, LADIES' DEPARTMENT.

of its kind in the West. Separate tellers were installed, and tastefully-equipped apartments were arranged for the exclusive use of women. So marked was its success that the accommodations soon became inadequate, and in the enlargement of the general quarters of the bank, recently completed to meet the necessities of increasing business, entirely new and more commodious apartments, beautifully designed and furnished, have been provided for the ladies' departments.

The bank owns its own building, a commodious and substantial seven-story

structure of stone and brick, prominently located, having a modern physical equipment, handsomely fitted and furnished, providing convenience and comfort to the patrons and the employed.

The notable success of this institution and its incident and substantial growth have not only brought it prestige and admiration at home, but prominence and credit abroad, and is a splendid example of a modern bank that affords its customers the highest perfection of service admissible under legitimate and prudent methods.

NORFOLK, VA.

NORFOLK NATIONAL BANK.

The President of this bank, Mr. Caldwell Hardy, is, perhaps, one of the best-known and most popular bank officers in the country, which is largely due to the valuable service he has rendered the

American Bankers' Association, first, as Chairman of the Executive Council, later, as its Vice-President, and last November at New Orleans he was elected its President.

When the Norfolk National Bank was

organized in 1885 he became its Cashier and in 1899 its President. The bank has been successful from the start, and is not only the leading bank in its city, but is one of the largest banks in the State of Virginia. Besides its capital of \$400,000, it has accumulated over \$400,000 surplus and undivided profits, and since its organization has paid \$492,000 in dividends to its stockholders. Its strength is best attested by the following statement made at the close of business on July 1, 1903.

A full list of the officers and directors of the bank follows:

Officers: Caldwell Hardy, President, president of the American Bankers' Association; C. W. Grandy, Vice-President; A. B. Schwarzkopf, Cashier; W. A. Godwin, Assistant Cashier.

Directors: C. W. Grandy, M. L. T. Davis, of M. L. T. Davis & Co.; W. D. Rountree, of W. D. Rountree & Co.; William H. White, F. S. Royster, president of F. S. Royster Guano Co.; R. P. Waller, John N. Vaughan, of Vaughan & Barnes; D. Lowenberg, J. G. Womble, C. A. Woodard, C. Billups, of C. Billups, Son & Co.; Thos. R. Ballentine, Caldwell Hardy, William M. Whaley, president of Roanoke R. R. & L. Co.; Henry Kirn.

The correspondents of the bank are: National City Bank, New York; Nation-

al Bank of Commerce in New York; National Park Bank, New York; National Bank of the Republic, Boston; Farmers and Mechanics' National Bank, Philadelphia; Fourth Street National Bank, Philadelphia; Merchants' National Bank, Baltimore; Drovers and Mechanics' National Bank, Baltimore; Riggs National Bank, Washington, D. C.; Traders' National Bank, Washington, D. C.; Fourth National Bank, Cincinnati; Continental National Bank, Chicago.

NATIONAL BANK OF COMMERCE.

Both Norfolk and the tributary country are enjoying a period of marked prosperity, and this is naturally reflected in the increase in the size of the figures reported by the banks. The National Bank of Commerce exhibits a striking gain in its capital, surplus and profits and deposits in recent years. Its capital has grown from \$50,000 in 1890 to \$500,000 at the present time, and the surplus and profits from \$41,000 to \$300,000. Individual deposits were \$381,000 on January 31, 1897, and \$1,279,000 July 16, 1902, and since the latter date there has also been a very large gain.

The volume of business of the National Bank of Commerce will be still further enlarged by an event recently consummated. This was the absorption of the City National Bank of Norfolk, an institution having \$200,000 capital. The interests brought together by the consolidation will, by united effort, enhance the already high standing and prosperous situation of the National Bank of Commerce.

The officers of the National Bank of Commerce are: President, Nathaniel Beaman; Vice-President, R. P. Voight; Cashier, Hugh M. Kerr; Assistant Cashier, M. C. Ferebee.

Under their management, seconded by an exceptionally strong and representative board of directors, the bank has risen steadily to its present enviable position.

ARTISTIC BANK RAILINGS.

The J. E. Bolles Iron and Wire Works, Detroit, Mich., have recently fitted up several fine banking offices in various parts of the country with ornamental office fixtures. The accompanying illustration is a handsome electro-bronze railing designed by Wm. H. Miller, architect, Ithaca, N. Y., for the Ithaca Savings Bank, of the same place. The uprights are 5-16 square steel, light and strong but pur-

posely left plain at the center so as not to obstruct the view. It is artistically provided with close ornamentation at the bottom, which affords the necessary protection.

The management are perfectly familiar with the manufacture of high-grade work and their product includes bank fixtures, grilles, elevator cabs and enclosures, plain and ornamental iron and brass work in large variety. They are constantly adding new designs and are thus enabled to furnish their customers with strictly up-to-date work. Their trade extends to all parts of the United States and several foreign countries.

DELAY IN SUBSTITUTION OF BONDS.—Secretary Shaw, it is said, will not insist upon his order that the National banks, which in the financial stress of last year were allowed to deposit State and city bonds with the Treasury as security for Government deposits, must substitute Government bonds therefor by August 1.

The Government accepted about \$20,000,000 of the State and city bonds during last August and September, and the banks have taken up only a small part of the amount, notwithstanding the fact that it is some months since Secretary Shaw issued his order that they be retired from the Treasury by August 1. Mr. Shaw will not revoke his order, but it is announced at the Treasury Department, that, owing to the present conditions in the money markets, he will allow the banks a little leeway to make the exchange.

The Government money held by the banks on the bonds deposited with the Treasury now amounts to more than \$15,000,000, and to insist that Government bonds be substituted or the money returned immediately to the Treasury, it is feared, would cause an unnecessary disturbance.

CHARLES A. SCHIEREN.

PRESIDENT NEW YORK SAVINGS BANKS ASSOCIATION.

Charles A. Schieren is the senior member and founder of the firm of Chas. A. Schieren & Co., tanners of leather and manufacturers of leather belting, located in the famous old "Swamp," the leather district of New York.

In 1868 Mr. Schieren started the business in a small way; it has grown to one of the leading concerns in this country. His success is largely due to his enterprise and push, keeping abreast with the marvelous development of this progressive age. He is considered an expert on leather belting, having invented and improved many valuable appliances for belting.

CHARLES A. SCHIEREN.

In 1886 Mr. Schieren was elected a trustee of the Germania Savings Bank, of Brooklyn, and succeeded the late Frederick A. Schroeder as President of the bank.

In 1901 Mr. Schieren was one of the originators and founders of the Hide and Leather National Bank, of New York, and was its Vice-President up to the time of the bank's being merged into the Western National Bank, which occurred last year.

In 1893 Mr. Schieren was elected Mayor of Brooklyn and served in that capacity two years. He is connected with the leading charitable and religious societies of Brooklyn and has held several honorable positions on the Commerce

Commission of the State of New York and Charter Revision Commission of the City of New York.

In 1902 he was elected president of the New York Savings Banks Association and was re-elected for the present year.

German Financial Statistics.—During the first six months of 1903 the new emission of stocks and bonds listed in the German bourses amounted to 923,180,000 marks (\$219,718,840) nominal value and 923,990,000 marks (\$219,909,620) market value. Of these, 804,780,000 marks (\$191,537,640) represented domestic securities and 118,400,000 marks (\$28,179,200) foreign securities. The shares of joint-stock companies amounted to but 91,480,000 marks (\$21,767,480) in the foregoing. During the corresponding six months of 1902 the new securities placed on the market aggregated 1,483,390,000 marks (\$353,046,820). During the first six months of 1903 the number of new joint-stock companies organized in Germany was but forty-two, having a total share capital of 78,000,000 marks (\$18,534,000).

Since the year 1899 the creation of joint-stock companies has steadily decreased, owing to business crises, which checked industrial and financial activity, more especially in the lines of metal-working industries, machine building, electrical plants, and breweries. A few of the large banking joint-stock companies have increased their share capital, having extended their business by buying out private banking concerns or taking up the business of joint-stock companies which had failed.

CARL R. SCHULTZ.

THE NEW PRESIDENT OF THE EQUITABLE NATIONAL BANK OF NEW YORK.

The advancement of young men to positions of the highest responsibility is one of the striking features of modern banking and one whose wisdom has been fully demonstrated by results. This does not imply that the wisdom and experience that belong to age are less regarded now than formerly, but it is simply a manifestation of that spirit of enterprise and energy that permeates all business undertakings, and which it was inevitable that banking must adopt if it was to keep pace with twentieth-century business requirements. Nor is it rare in these days to find in the young man, properly trained in business, a degree of skill and judgment heretofore regarded as the exclusive property of the man of mature age. Energy and progressiveness of the right sort are in no sense incompatible with safety, but on the contrary the bank whose management lacks the proper amount of push and enterprise is apt to find its business gradually absorbed by its more progressive rivals. The go ahead quality, so necessary to success, is apt to be found in the younger business men who have had experience in the successful conduct of large undertakings. Many instances might

CARL R. SCHULTZ.

be mentioned where young men have been advanced to the highest executive positions in the large banks of the city in the last ten years, and in practically every case the result has shown the wisdom of the step.

One of the latest instances of the advancement of a successful young business man to the executive management of a city bank is furnished by the election of Mr. Carl R. Schultz to the presidency of the Equitable National Bank, located at 805 Broadway, New York city. Mr. Schultz is only twenty-seven years of age, and is the youngest bank President in the city, and one of the youngest in the country. He has successfully managed the mineral-water business left by his late father.

Mr. Schultz has been a director of the Equitable National Bank for some time, and when the presidency was left vacant by the recent resignation of James M. Bell, he was selected by the board as the fittest man for the President of the bank. The capacity manifested by Mr. Schultz in his business relations heretofore, and the keen knowledge of men and credits shown during his service on the board of directors, assure him a successful career as a bank President.

Mr. Schultz resides at Murray Hill, in Union county, N. J.

CLEARING-HOUSE EMERGENCY CIRCULATION.

[An address delivered by THEODORE GILMAN, of New York city, before the recent convention of the Washington State Bankers' Association.]

Secretary Shaw is reported to have said, since he assumed his present office, that whenever the banking question is settled, it must be on axioms. Such a remark is in harmony with his methods of thought and action, and it is worthy of the careful consideration of all bankers and of the country at large. It has its positive and negative side. On the one hand it sets up truth and principle and the public good as the guide in financial discussions, and on the other it sets aside not only all experiments and untried measures, and unsound financial doctrines, but all seeking for self-advantage and private profit.

Let us see now whether it is not possible to reach a satisfactory conclusion on this unsettled banking question by following the suggestion of our Secretary and by basing an argument upon the acknowledged principles and the universally-accepted axioms of banking.

In an assembly such as this, composed of bankers from commercial centers where the frequently-recurring money pressures of our country are felt, and of bankers from localities where the need of support from banks in the cities is a common experience, the following proposition formulated by H. D. Mac Leod, of England, will, I think, be accepted as needing little demonstration :

"In the modern system of credit it is indispensably necessary that there should be some source to create and issue solid credit to sustain solvent houses in a monetary panic."

It cannot be disputed or denied that we are doing business under the modern system of credit, nor that that system is liable to periods of disturbance and of lack of confidence, which may and often do result in panics and money pressures, nor that solvent banks and commercial houses ought to be carried safely through such troublesome times, nor that free offers of money or credit will accomplish that end, nor that the credit must be solid and strong enough to circulate at par in the wildest panic, nor, therefore, that there should be established some source or sources legally authorized to issue this solid credit for the purpose named. This proposition is the end to which all Mac Leod's wide experience as a mercantile lawyer and all his profound studies as a lecturer on the mercantile law of credit, have led him. But we do not need any authority, however learned, to sustain this aphorism. It appeals to the common sense and daily experience of every banker, even if he has only been in business for the past year.

It is a great convenience in a discussion like this to use a proposition of this kind as a starting point, because it enables us to leave behind much preliminary argument and to take up without further delay the main subject on which I am appointed to address you, which is simply this : if it is indispensably necessary to have a source or sources to issue solid credit to sustain solvent banks and commercial houses in a period of stringency or monetary panic, how shall we get such sources, how shall they be established, what must be avoided in their establishment, and what safeguards must be thrown around them to secure the object aimed at with absolute safety. This subject is as important here in Whatcom as it is in New York. Money pressures follow the laws of other pressures. Pascal's law of the equality of pres-

asures is as true in finance as it is in physics. A money pressure in New York is transmitted in all directions and is felt on the Pacific Coast as well as on the Atlantic.

REJECTION OF SOME PROPOSED REFORMS.

We will clear the ground by first throwing aside the financial measures which the country does not want, for that is the practical way of proceeding with the discussion, and this is a practical business talk.

First, we do not want a governmental bank. The voices in favor of such a bank have been growing fainter and fainter during the past few years, until they are now hardly audible. Andrew Jackson conferred a great benefit on this country when he terminated the last United States Bank, which was fast becoming an influence threatening to American institutions. It is fortunate that now the proposition for a governmental bank can be dismissed with these few words.

Second, we do not want branch banking. We all have the kindest feelings towards the accomplished and indefatigable Chairman of the Banking and Currency Committee of the House of Representatives, and we recognize that the bill No. 13,363 of the Fifty-seventh Congress contains provisions which have been handed down from previous committees and for which he should not be held primarily responsible. But the truest kindness to the committee and to the coterie of foreigners and their friends who are interested in the scheme contained in the bill, is to say to them plainly that now that the public understand what is the purport and object of the bill, it will never become a law. It is true that it glitters with gold for its promoters, but perhaps ninety-nine and one-half per cent. of the bankers of the United States are opposed to it, and that ends it. The golden visions must fade away, for they will never be realized.

Third, we do not want an asset currency issued by banks on their individual responsibility. Such currency would not be solid credit which could not fail in the wildest panic. It would fail and be a delusion. It would promote inflation. The power to issue such currency would be a legal perquisite of the banks and would be used to its fullest extent, thus fostering speculation and bringing about an inevitable crash.

It has been proposed to lay a heavy tax on such issues, hoping thereby to force contraction by making the issues unprofitable. This is the chief defect of the German system. It would raise money rates generally whenever the tax was paid even on a small loan. The tax would of course be paid by the borrower. It would in effect be a penalty laid on active business. The farmer would pay this tax for moving his crops, which is evidently unjust. The true policy should be to protect all such legitimate business from high rates of interest.

SEPARATION OF BANKING AND CURRENCY FUNCTIONS.

But the principal objection to the issue of currency by banks on their individual responsibility is that the method is radically unsound and dangerous. The power to issue currency should be separate from the banking function. Lord Overstone, who was chief among the framers of the present charter of the Bank of England, wrote, in 1840: "The two things, the issue of paper currency, and the management of banking deposits, cannot be blended together in one system and treated by the same laws, and be governed by the same principles." He quoted with approval the following sentence from Webster's speech of March 12, 1836, "A National bank might be established with more regard to its functions of issuing currency than to its functions of discount." These two remarks, by Lord Overstone and Daniel Webster, should be considered as axioms, because if there is any fact proved by example in history, from the management of the Bank of England down to that of

the smallest wildcat bank of our own country, it is that directors of popular individual banks cannot be safely trusted with the power to issue currency without supervision and to hold the security themselves. The power of issue is limited to one bank in France, and to half a dozen in Germany, and the thousands of popular banks in those countries do not possess it. It would be diametrically opposed to the example of those countries if we gave the power of issue to six thousand or more banks in the United States.

The power of issue was separated from the banking function and made part of the State banking department, first, by the free banking act of New York in 1838. It was separated again by the National Bank Act in 1863, and placed under the supervision of the Comptroller of the Currency. It is separated in the popular banks of France and Germany and given only to the few governmental banks. It was separated in the charter of the Bank of England in 1844, following in point of time as well as under the guidance of the opinion of Webster, and we cannot reasonably now disregard the settled practice of our own laws and those of all civilized nations.

We have now eliminated from the discussion three of the principal modes of creating sources for the issue of credit—a governmental bank, branch banks and an asset currency issued by numerous individual banks. This is destructive criticism, but what we want is constructive results, and the question contained in our first axiom comes back to us, how can we construct safely the sources for the issue of solid credit?

Taking the National Bank Act as our authority and guide, we maintain that these sources must be separate from the popular banks. It then becomes apparent that Webster pointed out the way when he suggested national corporations which shall supervise the issue of currency and have nothing to do with the care of banking deposits. This thought uttered by our great American statesman had its influence in shaping the present charter of the Bank of England. Under its leadership we can go on and overcome our present difficulties which Webster's genius enabled him to see the solution of over sixty years ago.

CLEARING-HOUSES THE PROPER INSTRUMENTALITIES FOR ISSUING CURRENCY.

Some of our clearing-houses already perform this function in just the way Webster suggested and Lord Overstone insisted on. They are institutions separate from the popular banks. They issue clearing-house certificates to be sure, but these are a kind of half-developed currency and clearing-houses could just as easily issue the certificates in the form of a perfect bank-note currency to circulate as money as issue it in the form of rudimental certificates.

Clearing-houses are one remove from the popular bank which is exposed to the urgent solicitation of its borrowers, and therefore conservative action may always be confidently expected from them. The clearing-house would inspect every security offered as collateral, and the supervision would thus be obtained which Lord Overstone said is an essential condition for a currency which is to possess solid credit. It is evident that such clearing-house currency would give interior banks something with which to grant accommodations or pay depositors. It would thus protect their reserves by doing the work now done by legal tenders. This ex-Secretary Gage clearly explained in his report to Congress of December, 1899.

Let us now go back again to our axiom and see how it agrees with what has been said. Put in the form of a specific statement, it would read as follows: "In our modern system of credit as practised in the United States, it is indispensably necessary that our clearing-houses should be incorporated under a general Federal law, and be authorized to issue solid credit in the form of currency to sustain solvent banks and business houses in a monetary panic."

Why does not the axiom when thus applied meet all the requirements of our financial situation?

The Banking and Currency Committee of the House of Representatives very wisely adopted the rule that they would hear no argument unless on a bill which had been introduced in the House and referred to them as a completed measure. How much talk would be stopped if that rule were enforced out of Congress as well as in. Conforming to this requirement this clearing-house proposition was put in the form of a bill and introduced in the Fifty-fourth, Fifty-fifth and the first session of the Fifty-seventh Congress. In the last it was introduced in the Senate by Senator Platt of New York, as Bill No. 2716, and in the House by Representative Pugsley as Bill No. 7950. Arguments were made before the House Committees of the Fifty-fourth and Fifty-fifth Congresses and the general proposition has been received by the public with constantly-increasing favor. Many suggestions made by the committee and by prominent bankers have been incorporated in the bill.

The discussion of the subject is therefore both academic and practical. It relates both to the principles and axioms on which the bill is based and to the practical details which experienced bankers have considered essential. To give a practical turn to this discussion, it is necessary to refer to this measure and explain its working.

MONOPOLY BANKING AVOIDED.

The bill is, first, a general law, framed on the model of the National Bank Act. If there ever has been a victory for the people in the history of our nation, it was when the principle of banking under a general law was established by the enactment by the State of New York of the free banking law of 1838, which was the prototype of the National Bank Act. There can be no monopoly under a general law. Every citizen has equal rights to the benefits of such a law. That banking must be done under a general law in the United States should be considered one of our political axioms. Under the branch banking system only a few large banks would be benefited. By the incorporation of clearing-houses under a general Federal law, every bank in the country, small and large, would share equally in its benefits in proportion to capital. Small banks are those which are chiefly interested, for our large banks can take care of themselves and if necessary refuse to respond to calls for currency as they were compelled to do in 1893. Small traders and merchants and manufacturers and farmers are interested rather than the great trusts.

Secondly, the incorporation of clearing-houses under a Federal law meets the requirement of our opening axiom for the creation of sources which shall have power to issue solid credit to sustain solvent banks and business houses in a monetary panic. It is self-evident that clearing-houses can possess and exercise safely the power to issue currency, for they have issued clearing-house certificates for about forty years without loss, and the process in both cases would be practically the same, the main difference being in the completed form of the clearing-house currency.

PROVISIONS FOR REDEEMABILITY AND SAFETY.

Thirdly and fourthly, the two points to be guarded in the issue of clearing-house currency are safety and redemption.

Safety is obtained by limiting the security on which the currency may be issued to those assets which the National Bank Act allows the banks to invest their money in, limiting the rate of advance to seventy-five per cent. of the appraised value, limiting the amount issued to any one bank to the par of its capital, and requiring all clearing-house banks to accept these notes at par for any debts due them.

Redemption is provided for by the collateral security pledged, by the responsibility of the banks taking the currency, and by the ultimate responsibility of the clearing-houses. Also a redemption fund of five per cent. is to be placed and kept

good with the issuing clearing-house, as in the case of National bank notes. The notes are also payable on demand. The loan committee of the clearing-house may call the loan and require payment, or may demand additional margin to restore impaired values. Then, finally, power is given to the Secretary of the Treasury to notify any clearing-house or bank to redeem its circulating notes whenever in his judgment such action is required for the public good or to restore elasticity to the currency. Expansion is easy enough. It is redemption or contraction which must be most especially guarded, and it is claimed that these provisions would be conservative and effective.

AVAILABILITY OF THE NOTES IN TIMES OF CRISIS.

The fifth requisite is to make this currency immediately available to all clearing-houses, and to all banks and to all borrowers in case the exigencies of business demand its issue. To accomplish this one clearing-house of issue is provided for each State, and any clearing-house effecting annual clearings of over \$200,000,000 may be a clearing-house of issue. The banks in a State, or in districts into which the Comptroller shall divide States having more than one clearing-house of issue, shall only do clearing-house business with the clearing-house of issue in their respective States or districts. The currency would be prepared in advance by the Comptroller at Washington, and on requisition sent to clearing-houses of issue before the busy season began. Any clearing-house of issue then would be ready to answer promptly any request for currency by a local bank, after approval of collateral offered. Preparations would thus be made in the summer for the fall demand for currency, which would thus be met as promptly as by ordering from New York or other reserve city according to present methods. No emergency could arise which would not be forestalled by this method. Consequently emergencies, periods of monetary alarm, and currency panics, with all their dire effects, would be things of the past. The "Oregonian" said editorially, in reviewing this subject in its issue of November 20, 1902, "Under the operation of this method nearly all the distresses of Portland's financial community in 1893 could have been averted."

ADVANTAGES OF A CLEARING-HOUSE OF ISSUE IN EACH STATE.

By locating clearing-houses of issue in each State many advantages are gained. The intention is to recognize State boundaries and by consequence State laws and business customs. The banks in each State therefore become sponsors for the currency issued to banks in their State and any loss resulting from insufficiency of collateral security thereto is to be divided among them in proportion to capital, according to the rule now existing among clearing-houses.

The power of resistance against monetary disturbances is multiplied by separating the forces which operate to subdue it. If necessary, however, the whole power of all the banks of a State could be directed in support of a single city or locality. And all the power of all the banks in all the States could be combined in support of the Government in any crisis.

In ordinary seasons the invigorating influence of local issues of currency in supplying the needs of business through local banks where the initial business movement of the country takes place, that is among farmers and small traders, would be a most beneficial and vivifying stimulus to the development of the country. Here is where issues of currency are most needed and where they would do most good.

The currency issued on approved collateral security pledged to the State clearing-house, and guaranteed by the bank member taking it, and by the banks associated in the State clearing-house issuing it, is of a grade sufficiently high to be accepted at par by all clearing-house banks throughout the country in the same way

that National bank currency is now received. The acceptance by all banks follows the precedent established by the old State bank system, by the banks of Germany and other countries. The acceptance is parallel to the provisions contained in Section I, Article IV of the Constitution of the United States, which reads as follows: "Full faith and credit shall be given in each State to the public acts, records and judicial proceedings of every other State." The basis of this requirement is that the public acts of each State are worthy in themselves of faith and credit and therefore should be accorded such faith and credit in all the States on their merits. The currency issued publicly in one State and guaranteed by the banks of the State should be received in the same way at par in all the States.

The establishment of a clearing-house of issue in each State satisfies the desire of the States to support and direct each their own finances. The clearing-house of issue takes the place of the State bank with branches which existed so successfully until superseded by the National system of 1863.

Other methods of carrying out the clearing-house idea than by giving one clearing-house of issue to each State have been proposed, but it is submitted that they are open to serious objections. One proposition is to give the privilege of note issue only to clearing-houses whose banks have a combined capital of five millions or more. If the list of banks in the different States is consulted, it will appear that this plan would give the privilege to clearing-houses in twelve States only, while those in thirty-three States would be unprovided for except through cities in neighboring States. By such a plan there would be no clearing-house of issue between Baltimore and the Rio Grande, except at New Orleans. There would be none between St. Louis and San Francisco. The body politic cannot grow uniformly if some of its members are neglected. It is not practical to suppose that these thirty-three States would not demand and enforce recognition. Secretary Shaw said the banking question must be settled on axioms. It is also true that it will be settled by votes, and those who will give the votes are the Senators and Representatives, whose constituents include the bankers and business men in the different States. Indiana, Michigan, Texas, Georgia, Iowa and Tennessee, each have over 2,000,000 population, but no city with commercial banks whose combined capital is over \$5,000,000. These States are as well entitled to a credit currency and can make one just as good as any in the Union.

Another proposition is that the clearing-houses of issue should be restricted to the reserve cities. There are at present about thirty-five reserve cities and if they could be confined to that number, the plan might not work much injustice to the different sections of the country. A serious objection, however, to this method is that the last (Fifty-seventh) Congress changed the limit of reserve cities from 50,000 population to 25,000, so that now over 160 cities are eligible as reserve centers, and the number is constantly increasing. In 1890 there were 123 of such cities, and in 1910 at the same rate of increase there might be 200. The inducement would be great to possess the power of issue, and under this plan there would be a danger that the increase in the number of reserve cities endowed with the power of issue would soon go beyond the limit of safety. States, on the other hand, do not increase in number in the same degree. For these reasons it is claimed that the only practical and satisfactory and conservative basis for the establishment of clearing-houses of issue is to allot one for each State.

Clearing-houses might be organized in any city, even if they had only five small banks, and the more of such organizations the better, but they would not possess the power to issue currency. They would, however, serve a valuable purpose in being recognized means of communication with the clearing-houses of issue, as well as facilitating the business of their bank members.

PLAN WOULD BENEFIT THE MONEY MARKET.

The great marts of finance and trade like New York, and all the enormous business which centers there, are benefited by this system because they would no longer be subject to the annual drains to move the wheat, cotton and corn crops. These demands produce a violent disturbance if they come at a time when all funds are busily employed. It would be a great protection to the mercantile community in New York if the annual demand for \$25,000,000 greenbacks to move the crops was met by issues of clearing-houses in New Orleans, St. Louis, Chicago, San Francisco and other points. The banks of California, Washington, Oregon and Idaho have over fifty millions of banking capital, and clearing-houses in those States could issue all the currency needed to move their crops each year, without disturbing the rest of the country and with profit to themselves and to their farmers and manufacturers who would thereby get better prices for their productions. These notes could be issued safely if they were based upon and redeemed by the crops and manufactures of those States.

No greater protection to the money markets of New York and other eastern centers could be devised than the establishment of State clearing-houses at important interior cities with power to issue currency to meet local demands. The relief from all danger of a money squeeze would place a large additional profit on all securities dealt in at the New York Stock Exchange. The market for commercial paper would not be suspended, as it is now when money is tight, but would be open all the year round.

As the issues of currency are limited to the par of the capital of each bank, they would be small in States with small banking capital. In the West the farm products in some States would pay the notes four times over in any year.

When the business in any territory of the United States becomes settled so that National banks are established and wealth accumulates, this system could then with safety be extended to them.

All incorporated banks, State and National, should be entitled to membership in their local and State clearing-houses if in good standing with their respective controllers. They would have equal voice in the election of officers of their clearing-houses, and the majority would rule according to democratic customs. The privilege of the clearing-house would therefore be free to all under the general law of Congress. Thus the independence of all local banks would be preserved.

To avoid the disturbance arising from accumulations of money in the sub-Treasuries of the United States, it would be equitable and safe to authorize the Secretary of the Treasury to deposit with clearing-houses of issue any Government funds not needed for immediate use, in proportion to the capital of their banks, which money should be loaned by the loan committees to their banks on proper security. This would distribute the benefits of such deposits equitably all over the country.

We have now bankers' associations scattered over the country which have accomplished much good by discussions and in other ways. If the clearing-house system is established these associations should be regularly organized and made efficient aids in conducting safely the business of the banks. The Secretary of the Treasury should have some connection with and controlling power over these organizations as the representative of the interests of the public.

The above completes a cursory view of the clearing-house system proposed in the bill before Congress, and of the benefits which would be derived therefrom in sustaining and protecting the commerce and trade of the country.

This suggestion was originally made about nine years ago in response to urgent public appeals from legislative circles in Washington, asking anyone who had any solution for the banking troubles then existing to make it known. This suggestion,

being then made in response to that invitation, was taken up by Senator Manderson, of Nebraska, who introduced a bill in the Senate containing the idea. The method as proposed continued to grow in public favor as the result of wide discussion, and now after having been for six years in the form of the bill which I have been discussing, it has more voluntary support than ever before.

It is to be noticed that the one object aimed at is monetary stability. All other questions are eliminated, and no experiments proposed. The greenbacks are left undisturbed. The National Bank Act stands unchanged. The office of Comptroller is continued. The convertibility of silver is not discussed. The authority of the Secretary of the Treasury is not diminished, but rather increased, and the admirable system of sub-Treasuries remains as at present.

Only one thing is done and that is to incorporate clearing-houses under a Federal law and thus make them a part of our banking system. At present but one-half of banking operations are included in our Federal system. In the other half the banks have no uniformity of organization. The acts of clearing houses, as at present established, are legal or extra-legal and perchance illegal; inclusive, exclusive or occlusive, to use Henry Clay's word. They are in accordance with the measures of the Secretary of the Treasury or in disregard of them, as the case may be. But chiefly they are not competent or able to preserve monetary stability, as our financial history shows. This act proclaims peace. The words of Daniel Webster in his speech on "The continuance of the bank charter" are applicable. He said with characteristic emphasis: "The evils, all the evils, which we now feel and feel so acutely, result from political measures, and by political measures and political measures alone, can they be redressed. They have their origin in acts of the Government and they must find their cure in other acts of Government."

What other alternative is there to relieve the country of the monetary troubles which come periodically and with such destructive effects?

I answer, none.

An asset currency issued by individual banks, they to hold the security, would only invite disaster.

A bond-secured currency has no relation to the wants of business. Its issue and retirement depend on the price of bonds, as has been often stated, not on the needs of trade. No Secretary of the Treasury has ever put forth such honest and earnest efforts to increase National bank circulation as has Secretary Shaw. The paucity of the results has shown that no adequate relief can be expected from this quarter. One might as well hope to move a modern freight train with a locomotive engine of the pattern of 1863, as to move the business of 1903 with the antiquated banking system of forty years ago.

Nor would a system of branch banks with enormous capital give the desired stability and assistance.

The branch banks of England, with their 4,300 branches, were no adequate assistance to the business public in the Baring panic. They were then needy borrowers themselves. The branch banking system in itself furnishes no resource to which appeal can be made for help when a general demand is made on all banks. The French branch banks are strong only because they can appeal to the Bank of France, which has the sole power to issue in that country a credit currency. The Credit Lyonnais, with \$40,000,000 capital and 145 branches, advertises as its main resource that it has \$125,000,000 of good paper which is immediately discountable at the Bank of France. Without that recourse to a credit currency, it would be in a precarious position. With it, it is impregnable. It is no discredit to the Credit Lyonnais to advertise to the world that the Bank of France is its chief reliance. In the same way it would increase the credit of our banks to have it known that they had the backing of our clearing-houses.

English, Scotch, Canadian, German and French bankers are urging on us the supposed advantages of the branch banking system with amazing pertinacity and assiduity. Foreign bankers cannot grasp the idea that our banking laws have their roots in the Declaration of Independence, and to change our democratic system to a monarchical one we must erase the banking legislation of 125 years. Branch banking drains the country for the benefit of the city. It drains it not only of money but of men. Deveau de la Malle, a recent French writer on the political economy of the Romans, quotes from the ancient historian Pliny three words which contain a valuable lesson for us. They are, "*Latifundia perdidere Italiam.*" The broad estates, or the vast combinations of capital, sent Italy to perdition. Before these enormous aggregations of money were combined in the hands of a few, Italy was covered with moderate estates over each of which presided a Roman citizen. In this sturdy, intelligent and patriotic population was the strength of the nation. From it Rome could call a Cincinnatus from his plow to take the helm of State. A change came when capital bought up these small properties, and merged them into great estates which were controlled from Rome, for then throughout the length and breadth of the land the Roman citizen was replaced by a tenant or a slave, and the strength of Italy departed. The decline and fall of the Roman Empire then began.

So it will be a lamentable event in the financial history of the United States, when, if ever, the branch banking system replaces the intelligent and patriotic local banker with an agent or a clerk. No longer then could the nation call a man from his small country bank to take control of a State or the management of the Federal finances, for the race of our Cincinnati would then be extinct.

Though the banking discussion in our country during the past century has been protracted and deliberate, how simple the proposal for a clearing-house system is. It proposes no experiments. It is based on experience and the indisputable axioms of banking.

The service rendered by such a system is to take up the jars and jolts of business and give quiet and stability to the credit system, even when going at its greatest speed.

Can a manufacturer afford not to use a labor-saving device by which the cost of his product is greatly lessened? Can a railroad afford to neglect the use of devices to promote the safe and cheap transmission of freight and passengers? In the same way can the United States afford to go on using an antiquated banking system which occasions prodigious losses at frequent intervals, when the means of avoiding these losses lies unused at our hands?

It Is "Asset Currency."—Some of those discussing the proposed new system of paper issues say "asset currency" and some say "assets currency." Which is right?

When the phrase first came into use in this country after the Indianapolis and Baltimore monetary conferences it appeared as "asset currency." At the annual meeting of the American Bankers' Association at New Orleans a year ago, Horace White and others spoke of "assets currency," and many writers on the subject, notably those whose productions appear in the New York "Evening Post," have employed that form ever since. They are wrong. It is a rule of the English language that a noun used to qualify another noun becomes for the moment an adjective. Adjectives are not declinable, as are nouns. No one speaks of a hats rack or a books case or a boots jack. There were a few years ago self-constituted language-reformers who sought to establish a usage in favor of "teeth-brush." They fancied themselves purists. They were not purists, but would-be innovators, and their effort did not succeed.

High authorities have advanced the opinion that every individual with a logical mind is likely to speak and write correctly as well as to think correctly, for grammar is, broadly, the logic of language. There may be significance in the fact that most of the people who say "assets currency" are in favor of that departure from safe finance.

Is it because they are deficient in logical acumen that the advocates of currency with nothing but an asset basis call it "assets currency?" Is it failure to reason from cause to effect which leads them to favor currency of that sort, and to endeavor to substitute it for the admirable system that has served the people of the United States for forty years without the loss of a dollar to any man?—*Milwaukee Evening Wisconsin.*

SOUND vs. SOFT MONEY.

SOFT MONEY MEANS "I. O. U." OR "ASSET CURRENCY."

[Address by A. J. FRAME, President of the Waukesha (Wis.) National Bank, delivered before the Annual Meeting of the Wisconsin Bankers' Association, at Milwaukee, August 6.]

I grieve to disagree with some of my good friends, yet I yield to no man in patriotism. When we sum up the years of agitation for asset currency and a sound solution of the elastic problem and find that the only product that has been seriously considered to date is the Fowler bill—to the fallacies of which I make specific reference hereafter—I conclude it is easier to criticise than provide a remedy for incurable diseases. The disease under discussion might be diagnosed as "hard up." A large majority of the human family have an annual attack of it, and many have it in chronic form. Issuing I. O. U's will rarely cure the malady, but liberal libations of conservatism wonderfully ameliorate severe attacks.

The battle of the standards, which has been fought in the United States for more than a quarter of a century, culminated successfully March 14, 1900, in the adoption of the world's standard, gold. Since then, instead of strengthening our foundation by unequivocal laws, making our vast quantity of inferior silver coin—which is ever decreasing in intrinsic value—redeemable in gold; instead of wiping out our greenbacks, thus removing another burden from the Government which is not tolerated by any progressive nation, the burden of song has been to undermine our present foundation by the injection of an additional quantity of inferior currency called asset currency, under conditions not paralleled in any progressive country, and which, as certain as the laws of gravitation, will drive our gold abroad under the Gresham Law, or produce still further inflation in prices, resulting in riotous speculative ventures and consequent deeper depression when the ebb tide in our prosperity sets in. Such a result is as inevitable as that history repeats itself. The Kaffir proverb that "he who will not profit by the experience of the past, gets knowledge when trouble overtakes him" has no terrors for the speculator. Under the impetus of rapid fortune acquired by some, in the swelling tide of prosperity, the get-rich-quick fever has intoxicated the many. Some men ordinarily conservative have wavered in their course and been drawn into the maelstrom of underwriting speculative combinations in the hope of excessive profits. The promoters have not been able to sell enough of their watered stock to the innocents to pay loans, so banks might meet the call of the country for cash to move the crops, and under this plea, together with the unsolved sound solution of the elastic problem, the common complaint of all ages for "more money" is heard abroad in the land, when over-speculation is primarily the cause of trouble. In fact, crops could not move faster, as transportation facilities are taxed to their utmost every fall. This is rather a grave charge, but let us diagnose the case and draw conclusions as to its merits.

Britain, after a campaign as long and as bitter as ours over the Gresham Law and the expulsion of her gold by the injection of too many bank notes into her circulation, unequivocally adopted the gold standard in 1816. The integrity of that standard as against the uncertainties of other national standards has been maintained with a fidelity that commands the confidence of the whole world to the extent that London has long been the world's clearing-house. Will New York soon win that center if we inject an additional quantity of inferior currency into our circulation?

QUANTITY VERSUS QUALITY.

Christ said, a wise man builded his house upon a rock, but the foolish man upon the sand. When the rain descended and the floods came, and the winds blew, the wise man's house fell not, but as to the foolish man's house, great was the fall thereof. Is not this a perfect simile to apply to the building up of the superstructure of our great credit system upon a sound metallic currency for a foundation as against the sands of a credit currency? The pages of history are strewn with proofs that when the great instrument of exchange is deranged, all trade, all industry is stricken as with a palsy. That instrument of exchange recognized by the world as the solid foundation that does not totter when the storm rages in its severest intensity, is the only foundation for a prosperous people to rest upon and to-day our coffers hold over a billion dollars of it. This is a billion-dollar country and we need it. This gold has come to us since 1873 in the natural course of trade in response to the well-known principles of the Gresham Law and monetary science, as expounded by Dr. Adam Smith, Ricardo, Jevons, Sumner and many other eminent economists, and as also clearly set forth in what Prof. Sumner dubs the most important document in financial literature, "The Celebrated Bullion Report of 1810 to the House of Commons." I have quoted these maxims before, but deep-seated error requires repetition of them again and again. Summed up these principles are:

1. That rich countries will have all the coin they need, providing no impolitic act of legislation interferes to force it out of circulation by the injection of inferior currencies.

2. When the coin in any country exceeds the effectual demand, no vigilance of Government can prevent its exportation.

3. It is the province of Government to settle the quality question of money, and the needs of commerce will settle the quantity.

In proof of the above maxims, history says, Chinese walls, jails, shotguns or hanging did not prevent exportation of coin, and in these modern days the object lesson of the exportation of more than twenty-five millions of gold in the past three months in the face of the plea of the asset currency advocates for more money in the United States, is more potent than pages of logic. Let us fix the quality question and stop tinkering with the quantity, as the needs of commerce will settle that.

From the latest reports of approximate stocks of money in the world, I will quote a few:

(In Millions.)

	Pop. mls.	Gold.	Silver.	Uncovered Paper.	Total.	Total per cap. cir.
United States.....	80	1250	670	580	2500	\$30.00
Great Britain.....	42	528	117	117	762	18.29
France.....	39	903	420	134	1457	37.38
Germany.....	57	763	207	153	1123	19.92
Russia.....	130	715	103	...	828	6.25
Canada.....	5½	20	5 say	50	75	13.63

In 1873 the United States had \$18 per capita circulation, or a total of 750 millions of dollars, and practically all in promises to pay, California and vicinity refusing to adopt soft money. To-day, after our battle for sound money, according to above tables, we have about \$30 per capita, or 1250 millions of dollars of gold and practically the same amount of inferior money, our vast hoard of silver being nearly two-thirds flat. If an additional quantity is needed, let gold flow in under natural economic laws, the same as the 1250 millions have already done, \$62,000,000 in 1902 being added to our stock. Let us not inject inferior asset currency on top of our present excessive soft money stock and drive gold out, thus undermining our household.

The unprecedented production of gold for the past few years has paved the way for supplying all the gold this rich country needs to fill the channels of trade. The increase to nearly 400 million dollars in gold certificates in the past three years, to save abrasion and perfectly serve our wants in every way, is in line with the trend of all Europe as expressed by Prof. Edmund Théry in "*L'Economiste Européen*" in 1898. He said the gold in European banks increased in fourteen years—1883 to 1897—from 700 million dollars to 1700 million dollars, and that "In all sound money countries the bank note is in course of becoming a simple gold certificate redeemable on demand."

NO PRECEDENT FOR THE ISSUE OF ASSET CURRENCY BY NUMEROUS SMALL BANKS.

I assert without fear of intelligent contradiction that the new Fowler bill for asset currency to be issued by thousands of banks, large and small, has no parallel in any progressive country; that it is a discarded, unsuccessful experiment of the past; that it is unsound and gives preferences to picayune creditors as against the larger creditors, the millions of depositors, thus producing distrust, and distrust breeds panic. It also lowers our standard. Let us particularize a little.

CANADA.

Canada has thirty-five large banks with about seventy millions of dollars of capital (which has grown very little in twenty-five years) and about forty millions of surplus. They have many branches. They issue currency based on a five per cent. deposit and a first lien on assets. The right to issue notes is limited to banks with not less than \$500,000 subscribed capital. Banks pay out only their own notes, sending others home for redemption. What is the result? Canada has three and one-half million square miles of territory, or about that of the United States including Alaska, and much of it very productive; her population is a measly five and one-half millions; her total banking power is not equal to that of little Massachusetts with only 8,315 square miles of territory; neither is it equal to that of Illinois, Pennsylvania or New York.

We hear the cry for "more money" in the United States. By the foregoing table we have \$30 per head—one-half gold. Canada averaged in 1902 about \$13.63 per head and of that only \$3.64 per head is gold. Would inferior asset currency furnish our live country with its vast foreign trade an ample quantity of international money or drive out gold under the Gresham Law? If the banking system of Canada has anything to do with her lack of progress, then let us stand by our system under which our progress seems to know no bounds. Comparison with unprogressive Canada is simply ridiculous.

GREAT BRITAIN.

The Bank of England issues £18,175,000 of notes on a deposit of the same amount of Government securities. It has thirty to forty million pounds sterling in notes outstanding constantly in addition, but every note has its value in gold behind it. The large banks of England, Scotland and Ireland in 1844 and 1845 were limited to the amount of their then outstanding uncovered notes, and seventy per cent. of the right to issue of any of these banks going out of business since that date has reverted to the Bank of England. Since 1845 this has reduced the maximum uncovered issues £8,000,000 and added £4,175,000 to the Bank of England issues. Of late the whole amount of asset currency issued by all the big issuing banks of England, Scotland and Ireland has been approximately by the insignificant sum of five million pounds sterling, or about two-thirds of the maximum allowed, and all the rest of their circulation has Government securities of gold behind it. What is the secret? Inability to pay out any notes but their own and unlimited liability of every bank stockholder for every note in circulation. How much circulation would our banks issue if under

such restrictions, including an unlimited liability clause on issues? The clear intent of Britain is to entirely eliminate bank note-currency from her circulation excepting only that of the Bank of England. Mr. Fowler, at New Orleans and before a committee in Congress, stated that Scotland could issue \$148,000,000 asset currency. When? In 1845 the uncovered circulation maximum allowed by law was £3,087,209 and in 1898 it was £2,676,350—according to the Monetary Commission Report—(see page 281)—and Sound Currency Red Book (page 187).

FRANCE.

Since 1848 the Bank of France has had the sole right of issue in France. Although able men have claimed this issue as asset currency, I cannot understand the force of their reasoning in the face of facts. Mr. Fowler in his zeal for asset currency states that the Bank of France can issue \$1,000,000,000 of notes, but he fails to state that the Bank of France of late years has had approximately \$700,000,000, of circulating notes outstanding, and has kept about ninety per cent. of its outstanding notes in coin in its vaults. That great reserve of coin naturally inspires confidence. The balance of ten per cent. asset currency even is practically covered by loans to the Government, so the bank could pay every dollar of its notes by selling its Government paper without calling a dollar of its loans. The Bank of France is more a bank of issue than a bank of deposit, as its issues have averaged five times its deposits for many years.

GERMANY.

The Imperial or Reichsbank of Germany is allowed a maximum issue of uncovered notes to the amount of about 120 million dollars. Five per cent. interest is charged on issues in excess of this for emergencies. For ten years past it has had a metallic reserve of say eighty per cent. on an average circulation of about 800 million dollars. The many other issuing banks are now reduced to only five large banks that are allowed to issue asset circulation to the extent of the comparatively insignificant sum of eighteen million dollars, any excess being covered by Treasury notes (which notes are fully covered by gold in the Government war chest), notes of other banks or coin. L. Carroll Root says, "The National or (Imperial) Bank is the center of the system, with the evident intent on the part of the Government ultimately to transfer to it the sole right of issue." Now note. The issues of the uncovered notes allowed a few years ago in order to nurse along the speculative adventurers resulted disastrously and Germany has been in a depressed financial condition ever since. If only the five per cent. emergency currency had been issued, the speculative fever would probably have been checked before serious trouble ensued.

The following countries have only one bank of issue, to-wit:

	Capital.	Reserve Required on Note Issues.
The Bank of Austria.....	45 mil. dols.	40 per cent. coin and 60 per cent. quick assets.
Bank of Belgium.....	10 " "	33 1/4 per cent. coin on notes and deposits.
Bank of Netherlands.....	64-10 " "	33 1/4 " " " " " "
Bank of Norway.....	3-1/4 " "	50 " " as to notes in coin.
National Bank of Denmark.	7-1/4 " "	37 1/4 " " " " " and 150 per cent. assets besides.
Imperial Bank of Russia...	20 " "	Over 100 per cent.

There are three large banks in Italy and three in Greece.

Sweden has a large State bank and some private banks that issue currency based on a deposit of mortgages, etc., in public custody.

Is it not clear from the foregoing that the great centralized institutions of European nations are assuming the issuing functions of the currency, with a metallic foundation as heretofore referred to in Prof. Théry's article?

OX-TEAM VERSUS TWENTIETH CENTURY PROGRESS.

What about former New England banking, the Suffolk system, the banks of Indiana and Louisiana, and several others so often quoted by asset currency advocates? Simply this. On pages 302-3 and 4 of the Report of the Monetary Commission, under the head of New England Bank Currency, we find that "in some States an unlimited liability for both notes and deposits was enforced upon the officers in case of mismanagement. In some instances the stockholders were liable to the amount of their stock for the ultimate payment of the notes, and in Rhode Island they were subject to unlimited liability."

Under the Suffolk system each country bank kept \$2,000 on deposit in Boston without interest. Banks were compelled to pay out only their own notes, and send all others to Boston for redemption. This compulsory redemption, lack of confidence in paper money generally and scarcity of gold in those days, brought about the redemption of bank notes in that system ten times over every year, thus entailing exasperating annoyances, constant assorting and expense for express, etc., and history says: "Country banks were loud in denunciation of the system, and there was always friction between the city and country banks." With all the rigid regulations the loss to holders of notes in failed banks in that small system was \$877,327. As no man has ever lost a dollar in the past forty years, nor sleep either under our vast national system, distrust is entirely eliminated, therefore no one troubles himself about redemption.

In the Sound Currency Red Book, in an article by Horace White, a strong advocate of asset currency, pages 207 to 210, we find under the head of

STATE BANK OF INDIANA.

"On all applications for loans above \$500, a majority vote of five-sevenths of the board was necessary, and this must be entered on the minutes with the names of the directors so voting. Directors were individually liable for losses resulting from infraction of the law, unless they had voted against the same and caused their votes to be entered on the minutes, and had notified the Governor of the State of such infraction forthwith, and had published their dissent in the nearest newspaper. Any absent director to be deemed to have concurred in the action of the board, unless he should make his dissent known in like manner within six months." One-half of the stock belonged to the State. The bank's principal business was loaning its own notes, its deposits being but a small fraction of its capital.

We also find under the head of

LOUISIANA BANK ACT OF 1842.

1st. A specie reserve equal to one-third of all its (the bank's) liabilities to the public.

2nd. The other two thirds of its liabilities to be represented by commercial paper having not more than ninety days to run.

3rd. No bank to pay out any notes but its own.

4th. All commercial paper to be paid at maturity, and if not paid, or if an extension were asked for, the account of the party to be closed and his name sent to the other banks as a delinquent.

It would take a powerful glass to spy out a gallery of bankers that would stand such ridiculous rules as those.

References warmly advocating the Indiana and Louisiana systems by Horace White and Congressman Fowler were made at New Orleans before the American Bankers' convention.

If we were to adopt the Louisiana act of 1842, compelling the keeping on hand of $33\frac{1}{3}$ per cent. in specie of all liabilities to the public, the National banks would

hold to day more than \$1,600,000,000 specie ; whereas, they hold say eight per cent. or about \$400,000,000 specie.

The rigid Louisiana act would require an additional \$1,200,000,000 of coin reserve. Under the Louisiana and Indiana experiences, which are almost parallel as to reserves, we would be compelled to keep four times as much specie reserve as we do now. Where would the coin come from, and who would retain their National bank charter under such rigid rules and many others not enumerated ? Progress would simply be throttled.

Again, under the Indiana experience the banks were limited in their aggregate loans to two and one half times their capital. The aggregate of loans, including other securities in National banks to-day, is over five and one-half times their capital.

Although distrust, insufficient coin and general wildcat banking drove home for redemption the asset currency issued in these isolated cases, no loss occurred, because of over-rigid regulations, excessive reserves and limitations of development. Those were the days of the ox-team and not paralleled by twentieth-century conditions.

ELASTICITY.

To obtain any elasticity whatever at least one of three conditions is necessary :

1st. Distrust in the mind of the holder of a note, thus hastening redemption.

2nd. A compulsory law to drive it home.

3rd. A graded tax sufficiently high to make it unprofitable except under stress.

The first head needs no argument. Greenbacks are not elastic, although redeemable in gold, because the element of distrust is wanting. The second head by paying out only their own notes operates in Canada in sending all currency home twelve times a year, and in Scotland all notes are redeemed twenty times over in a year. Like conditions in the United States, with our thousands of banks and vast extent of territory, if the quantity of such currency as suggested by Mr. Fowler was issued, the cost in labor, time in transit both ways, expressage, etc., would entail an expense to the banks of millions of dollars annually.

THE FOWLER BILL.

The new "asset currency" Fowler bill contains these sections

Sec. 10. "That for the purposes of this act New York, Chicago and San Francisco shall be redemption cities, and all of the National banks redeeming their notes at any one of these cities shall constitute a redemption district, and the New York redemption district shall be known as number one, the Chicago redemption district as number two, and the San Francisco redemption district as number three.

Sec. 11. That if any National bank shall receive such circulating notes of any other National bank located outside of its own district, it shall not pay them out over its own counter, but shall forward them either to some bank in the district to which the notes belong, or to some bank located in the redemption city of its own district and then they shall be returned to the bank issuing them or to some bank in the district to which the bank issuing them belongs."

Now note: What a lovely occupation the tellers will have assorting out notes of banks "outside of its own district" especially if they are like present issues—packing them and expressing to "some bank in the district to which the notes belong" or "to the redemption city of its own district," and then they shall be returned (by express again) to the issuing bank or—I will add—to the nearest and cheapest spot where they can be got rid of, then *vice versa* to reimburse banks for cash reserves. Would not this process, with its localized currency, petty and expensive annoyances, pettifogging at redemption, fail in its object, to wit: direct compulsory redemption ? Would it not be clearly an act of credit currency inflation ? A stretched rubber with the elasticity gone ?

The element of distrust doubtless would be small, because of the guarantee fund

and first lien on assets, but that same element in times of financial trouble would be deep-seated with the great army of depositors, because of that first lien. The depositor has just as much right to know he has equal rights in assets, as that a banker will rest more sweetly if he knows his borrowing customer has given no first lien to another on his assets.

DEPOSITORS LOSE.

If we prefer the note holder by a first lien to the depositor who takes the dregs, this will be the result. Under the present law for every \$100,000 of circulation issued \$100,000 of bonds are deposited to secure it. These bonds cannot be spouted for any other purpose, and in case of a bank failure the \$100,000 circulation is fully cared for and the premium on the bonds is left for the depositor, together with all other assets. Under the asset currency scheme, in case of failure of a bank, the \$100,000, which ought to be in Government bonds to care for the circulation, is loaned on commercial paper. The 1902 report of the Comptroller of the Currency—pages 386-7—shows for banks that have failed in the past forty years this result:

Nominal assets at date of suspension.....	\$149,554,311
Collected from assets.....	77,529,651
Leaving losses of.....	\$72,024,760

Or about forty-eight per cent. of assets. Is it not clear that for every \$100,000 of commercial loans instead of in bonds the depositor will receive \$48,000 less in dividends than under the bond-secured plan?

Again, If a bank extends its loans to the limit of its assets, then swaps its I. O. U's. without interest for its customer's note at five per cent. to six per cent., thus carrying out the asset currency advocate's ideas, does not that act smell loudly of kiting?

The third point is the only one that ought to be considered seriously. Under ordinary conditions the fluctuation in the interest rate should be the barometer which ought to check undue expansion and inspire conservatism. Under fear of occasional extraordinary disturbed conditions, if cash could be provided on sound principles to loan to all solvent parties, serious losses would doubtless be prevented; but such cash should at once by a heavy tax be forced to return to its reservoir as soon as its work was accomplished, so that no act of inflation would result. Its operation should be like a water reservoir, always ready to put out an incipient fire and at once refill again. In the panic of 1878 about \$33,000,000 of clearing-house certificates were issued, and in 1893 but \$66,000,000. Last fall the New York Clearing-House bank reserves were short \$23,000,000. Mr. Gage stated that that shortage compelled \$92,000,000 in liquidation of loans and deposits, the reserve being one-quarter of the deposits. If \$23,000,000 to \$66,000,000 will put out a severe fire, why do we need \$175,000,000 as provided by the Fowler bill as the entering wedge and more than \$500,000,000 later as the intoxication grows under the stimulus of soft money, as indicated by Mr. Fowler in his address at St. Paul on August 7, last? Let us not forget though that under the Fowler bill forced redemption is a farce; therefore the reservoir will likely be empty when the fire grows warm. The proposition to issue asset currency to the extent of 100 per cent. of National bank capital, I consider positively dangerous.

PLAN FOR CLEARING HOUSE EMERGENCY CIRCULATION.

Right here permit a suggestion. It may not be a perfect plan in accomplishing the end sought, but no proposition yet offered is perfect.

First. A bill somewhat on the lines of the Aldrich measure ought to be put upon the statute books to prevent locking up unnecessary funds in the United States Treasury.

Second. Legalize clearing-houses as banks of issue on same form as National bank currency, secured by clearing-house certificates issued on same plan as heretofore, to any bank in clearing-house to whom the clearing-house committee sees fit to grant it. Five per cent. interest to be charged from date of issue to date of deposit by the borrowing bank, of funds with United States Treasurer to redeem its borrowings, when the clearing-house certificates will be cancelled and securities returned.

This will permit not only National, but State, private or any other clearing-house bank to get advances in times of financial stress. Country banks can get advances through their correspondents, thus serving all the banks of the country.

The conservatism of the clearing house committee will prevent unnecessary issues, the rate of interest will prevent inflation, and redemption will automatically take place as soon as pressure for funds is over.

INCREASING THE GOLD RESERVE.

It is a significant fact that the Chicago Clearing-House has never issued any clearing-house certificates. An examination of records shows materially larger reserves of cash on hand and due from banks, as against New York reserves for many years past, thus clearly revealing the cause. If New York will avoid trouble, let her keep adequate reserves and reduce her paying interest rate on balances when money is easy. As old-world metropolitan cities are internal, New York must look to her laurels or Chicago, located practically in the center of the garden of America, will capture the prize.

I challenge any man to prove that since 1893 there have been more than two fall seasons when the money market has been above a normal or reasonable level, and then speculation and not crop movements was the primary causes of trouble. I will specify these causes later. The slight raise in rates was generally appreciated after the very low rates for most of the year.

Do we need more fiat money in the United States? Look at the table of approximate stocks of money as noted heretofore—

	<i>Silver coin.</i>	<i>Uncovered paper.</i>
The United States has.....	\$870,000,000	\$580,000,000
Great Britain has.....	117,000,000	117,000,000
France has.....	420,000,000	134,000,000
Germany has.....	307,000,000	158,000,000
Russia has.....	108,000,000	None.
Canada has.....	5,000,000	50,000,000

Nearly all silver is subsidiary except that of France and the United States. Does any one think from the foregoing immense issues aggregating \$1,250,000,000 that we need more soft money injected into our circulation? Never in the history of our country was our credit system so expanded as it is to day. We do not need additional I. O. U. or asset currency, which only adds fuel to the fire of speculative frenzy. What we need, if anything, is less inferior money and more gold for a foundation that will stand through storm as well as sunshine. Under natural economic laws over \$550,000,000 of gold has come to us in the past five or six years. More will not undermine, but strengthen the foundation. It will only come to us, if we need it, by keeping out cheaper money, and especially credit currency which is not as good as what we now have. We have ample assets with which to buy more gold in the world's markets if the natural needs of commerce demand it, and we only need some provision for extraordinary emergencies, as noted under the third clause. In the emergency of the Baring's failure in Great Britain in 1890, the Bank of England borrowed from the Bank of France £3,000,000 and from other outside sources £2,000,000 more. If we keep our credit unstained and unstrained, the world will lend to us in need, as we have plenty of collateral.

INTEREST RATES.

A late writer in a New York magazine advocated asset currency in the United States to lower and hold steady interest rates, in order that New York might wrest from London the title of the world's financial center. What logic! Great Britain has the most rigid and least elastic of all currency systems in the world, but she has a metallic foundation that the world never questions. Her surplus capital is invested the world over and is subject to her beck at all times. These are clearly the reasons why rates of interest are more steady, and her prestige would doubtless wane under credit currency expansion such as we are now discussing.

Our friend Fowler also advocates asset currency to lower the rate of interest in the United States. Rates of interest with us now are about one-half those of thirty to forty years ago, and every decade sees a decline in rates. After carefully reading the best authorities on political economy I conclude the cause is accumulated surplus capital and not running the printing-press increasing outstanding I. O. U's. Mr. Fowler also says present rates of interest for the benefit of five million borrowers ought to be cut in two, but how about the benefits to the fifteen million depositors, the eighteen million holders of insurance policies and millions of other savings of the people generally? The greatest good to the greatest number clearly does not require ruinously low rates of interest. I challenge any man to show me a country where a very low interest rate prevails that can compare with ours in general prosperity.

OVER SPECULATION THE REAL CAUSE OF TROUBLE.

Then what is the primary cause of trouble?

My answer is over-speculation. Let me quote and see what the consensus of opinion is.

[Mr. Frame quoted from a number of financial newspapers and magazines in support of this view.]

Does not this compilation of opinions, made more than six months ago, seem in the light of later events prophetic?

It seems needless to quote further than to say that the notable address of Frank A. Vanderlip in October last at Wilmington, N. C., ought to ring the death-knell of any methods to bring about further inflation with its resultant high prices, increased imports, decreased exports, thus bringing about much sooner a reaction in our progress, which is as certain as that history repeats itself. If any one is seeking truth and will see the hand-writing on the wall, he is commended to carefully read the standard authorities on political economy for parallel conditions, and the fogs of the common error as to the cause of trouble would be illumined by a clearer light. In view of all these facts, is our trouble lack of money or is it over-speculation?

Doubtless some are clamoring for asset currency because they think there is profit in it, but as sure as there is material profit in its issue and it is not confined to great centralized institutions which are more likely to be prudent in issuing it, there being no monopoly in banking, the multiplication of banks would soon destroy such profits. I assert that a National bank has no more right to issue currency when its credit is strained and force it on an unwilling public without interest or penalty, than have State banks, or a merchant or manufacturer under like conditions. It never should be done except in emergencies. In any case collateral should be put up as security, and a tax imposed high enough to drive it out of use as soon as its work is done. The interest rate is the check valve to prevent undue expansion and inspire conservatism, not only in banking, but in all commercial pursuits. I assert with confidence that no parallel case is extant to-day that compares with our subject under discussion. Large centralized institutions only have the right anywhere of

issuing a limited amount of asset currency. Germany is financially depressed to-day because of the abuse of the license accorded her great centralized bank, as heretofore noted.

Canada, which is harped about so much, is one of the most unprogressive countries.

The early ox-team days when bullocks, wampum, beads, skins, etc., were legal tender; when collateral and gold were scarce, have given away to abundance of gold, plenty of collateral, abundant prosperity and a confidence that has built a colossal superstructure of credit unknown in ancient or modern times. Shall we build a metallic foundation on which this structure shall stand, broad, strong and enduring, or shall we undermine the house we have built by piling credit on credit and misname it reform? Oh reform! reform! What crimes are committed in thy name. Blow up the balloon to the limit, and then give it another puff; give the rubber another stretch after it has been drawn almost to the point of breaking; take another drink when the intoxicated patient is over loaded. No! No! Let us pour oil on the troubled waters, put the brakes on the over worked engine, put more ballast in the hold, instead of adding to the sails.

This country is to be congratulated that in the year 1902 no asset currency was allowed, thus causing a check to the wild and reckless pace of the promoters assisted by some overgreedy bankers. Another safety-valve was the wonderful prosperity of the country as a whole, even if we did not have asset currency. If banks could have issued asset currency, thus still further inflating conditions under the get rich-quick fever, I fear results would have been somewhat like Germany's 1900 experience. Foreign banks realized our condition and put the brakes on by raising the rates on money so high that further expansion was checked. The interest rate should be the corrective for all troubles except occasional emergencies which might call for more heroic treatment. The world is open to us to borrow in case of need and with quick transportation and plenty of good collateral, with slight fluctuations in interest rates, legitimate interests will rarely suffer. An occasional panic is inevitable in all progressive countries. It has its day like the measles and the grip. Political economists of all ages have wrestled with the knotty elastic problem in the hope of evading panics, but failed. In these latter days the woods are full of popular elastic nostrums to cure a case of short cash to move the crops, when the true diagnosis proves that the common principles of prudence have been violated, and over speculation and excessive promotions have run riot. The shock of last fall has probably sobered up the more conservative, therefore as the unexpected usually happens, the forewarning will probably prevent a repetition of the trouble.

It is to be hoped that the bargain counter which has been laden with rich pickings for conservative buyers with cash, in the past few months, has been nearly cleared; that the undigested securities will be dumped into the sewer, and progress along conservative lines once more be resumed with Anglo-Saxon energy.

A weighty responsibility rests upon our American Bankers' commission, and more with our statesmen if this question of asset, elastic or emergency currency is to be settled on sound and enduring lines. Our patriotism for country ought to rise higher than to settle this momentous question with a view of larger profits to the banks. If New York is to become the world's financial center, the quicksands of asset currency, added to our present over-supply of soft money, will retard the day on account of loss of confidence in our standard, and only a gold foundation of international money will hasten it. If this country will continue its wonderful onward progress, it will not advance on exploded academic theories or populistic nostrums, but on sound and conservative lines. I firmly believe from a careful survey of the world's history on banking, that asset currency as a cure-all for economic troubles is a fraud, a delusion and a snare. The remedy is worse than the disease.

BANK NOTES NOT MONEY, BUT PROMISES TO PAY.

[From an address by August Blum, Assistant Cashier of the First National Bank, Chicago, delivered before the Illinois Bankers' Association.]

I have come to the conclusion that one of the great difficulties encountered in the discussion of this bank note question, is the state of mind, the psychological state, if you will permit me the expression, in which most of us view it. Philosophers have taught us that our ideas are the result of our experiences. Those who have read the work of Locke on "Human Understanding" know what I mean. Experience and a long series of impressions create in us a certain consciousness to which we cling more tenaciously than to the result of pure reasoning. We look upon a thing, as the saying goes, in a certain light and consider that as the conclusion of the whole matter.

Now, with regard to this bank credit currency. Few of us have had a living experience of the practical working of a sound system of bank currency. Our older colleagues have seen and we have frequently been told of the disastrous results of a bad currency system; hence every proposition of this nature is looked upon with alarm as tending to re-establish the stump-tail, wildcat currency of ante-bellum days.

Then again we have unfortunately learned by the habit of forty years to look upon a promise to pay as an actual and permanent addition to our supply of money. If we would sweep that cobweb out of our brain, if we would learn to look upon a bank note with the full force of our intellect, not as money which we put away in our vault and call "cash on hand," but simply as the note of a bank which is issued as the means of exchange, the same as a check, and is forwarded to its place of redemption as soon as it reaches our counting-house, then a vast advantage would be gained. The ground of discussion would be shifted at once. You see, it is all in the attitude of mind. Those among us who have seen the system at work in other countries and particularly among our Northern neighbors, have no difficulty in seeing it in its proper light. I am thinking of one gentleman among us, honored by all of us, whose banking career dates back to the days when the system of redemption by the Suffolk Bank made the unsecured bank currency of New England equal to the best of the world. He is one of the most intelligent and ardent advocates of such a system to-day.

As I said before, I am not on this platform to break a lance for bank credit currency. If there are objections to it, let us candidly consider them; if there are difficulties in the way of establishing it, let us see if they can be overcome. What I plead for is that we place ourselves in a receptive and unbiased frame of mind with regard to this question. Like all other momentous questions in which the human race has been concerned, it can only be solved by full and unbiased discussion. If we cannot be convinced that the creation of a bank credit currency is a safe and beneficial measure, let us reject it; if in the face of all preconceived aversion we are made to see that it is the only remedy to cure the ills under which our financial system suffers, the only means to avert threatening dangers, then its adoption will indeed be irresistible. Newspaper opposition, vehement in some quarters to-day, will as surely change its front as it changed it in notable instances on the question of the gold standard. Let us trust to the merits of the cause; let us meet the question, above all, with an open mind. Let us be actuated by one motive only, and that is to help place the financial condition of our country upon a sound, lasting and scientific basis. That is the burden of my short and informal talk.

TRUST COMPANIES AND BANKS.

Editor Bankers' Magazine:

SIR: It seems to me that a very one-sided view of trust companies is expressed by Mr. Bryan in your esteemed magazine for August.

In the early part of his article there is a serious reflection as to chances taken by trust companies, and as to examinations. A point often overlooked in examinations of financial institutions is that the trust company must show up dollar for dollar in value everything under the head of "resources," whether in the shape of real estate, loans, securities, etc. A bank, on the other hand, passes to the examiner thousands or millions of dollars' worth of paper, of the value of which he is often unable to form any idea. I have in mind a bank with about four million dollars of assets, which presents to the examiner nearly two millions of paper. He would have to be omniscient to know anything concerning its value. He would have to know thousands of signatures and hundreds of people in the town even to determine as to whether it were genuine.

Then again, on the failure of every mill or large business interest, you hear of the bank having lost money through this paper. This, of course, is not so with the trust companies, and I think this point of greater security is a very large factor in the transfer of accounts from banks to trust companies.

We can only judge of the future by the past (although all good Americans seem unwilling to do so in things financial), and when my banking friend says "it is believed by many conservative bankers, should we experience another financial panic, some of the trust companies would be unable to weather the storm," we can only look back at the great storm of '93 and see the trust companies emerge in fully as good shape as banks and more popular than ever, as their growth shows.

Philadelphia (the birthplace of the "modern bank") is known as a city of conservative and careful people, and their approval of trust companies is evinced since that time in trust companies adding ten to their number and banks shrinking about the same number.

This approval is further marked in eighty millions of capital and surplus of trust companies against forty-eight millions for the banks, and deposits of \$264,000,000 to-day against \$237,000,000 in banks. Of this latter amount \$29,000,000 is due trust companies. (These figures include four saving funds as State institutions.)

My idea is that the opinion should obtain that there is room for both banks and trust companies and that we should "live and let live." Certainly, in so far as both are well and conservatively managed, both fill a public want and both should live, and when that time of "financial storm comes (which is bound to come, but which we don't want the "calamity-howler" to hurry along) let both stand shoulder to shoulder and aid one another and not be pleased with the idea that our neighbor will not "weather the storm."

No one, of course, is so foolish as to think the trust company can fill the place of the bank in supplying those "sinews of war" in the form of discounts which the business men must have.

The writer feels that he can see just as far into a millstone as his neighbor, but he doubts if the trust company has as yet attained its proportionate growth, and he personally feels there are three great advantages to himself—two per cent. on his daily balance, greater privileges as to charter, and less chance of covering defalcation in time of examination.

Any one of these should attract business to the "modern bank."

WM. T. MURPHY,

Secretary and Treasurer Germantown Trust Company.

PHILADELPHIA, August 18.

PLENTY OF ROOM FOR BOTH CLASSES OF INSTITUTIONS.

Editor Bankers' Magazine :

SIR : Much has been said in regard to the way in which the trust company encroaches on the business of banks. It would seem to me that there is room for both the trust company and the bank. The trust company should keep the same amount of cash reserve that the banks not acting as reserve agents keep. It might work well if the trust company were to separate its trust funds from its other deposits and not be obliged to keep a reserve on that part of its deposits.

I think that in a large city the trust company is a good thing, and I see from reports in *THE BANKERS' MAGAZINE* that quite a number of the smaller places are being supplied with them. I believe the majority of the trust companies do not try to get active business accounts but confine themselves to savings accounts and trust funds. It seems to me that if any banks have reason to complain it is the Savings banks and not the banks of discount.

I think banks of discount should not do a Savings bank business, although I presume a large majority do, and in some cases it probably is very profitable. But I do not like to see banks running on each other in the way of offering higher rates of interest for deposits. It would be beneficial if they could all come to some agreement about the rate of interest for deposits—make it a fair rate; I think in New York State three per cent. is enough to pay any one, keeping their money safe for them and paying it to them on demand.

There is only so much money in the country anyway and one bank has about the same chances as another for loaning or investing safely. I know the National bank with which I am connected is holding deposits year in and year out at three per cent. that banks and trust companies in cities not more than thirty miles away can not get by offering four per cent., simply because we have the confidence of these people. Not that these banks of which I am speaking have not the confidence of the people, for I believe they have. If banks would try as hard to get the confidence and good will of the people as they do to get their deposits, they would get the latter a good deal cheaper than they do.

If a State or National bank wishes to carry on a savings account department it is a very easy matter to arrange a way of keeping the accounts in a ledger by themselves. I should keep all active accounts in a Boston or daily balance ledger. It would not be necessary to have stated times for figuring the interest on savings deposits. Unless the amount was small and the customer was making deposits frequently, give a certificate of deposit drawing interest if left six months, putting in the clause "interest to cease after one year unless renewed," so as not to get behind in the payment of interest. If people wish to make small deposits, weekly, give them a pass book not drawing interest, and when they get fifty or a hundred dollars take it out of their book account and give them an interest-bearing certificate. We have tried this with small depositors and it seems to work very well.

If banks oppose the trust company to such an extent, why is it that so many bank officers and directors are connected with trust companies?

GEORGE F. BIGELOW,

Assistant Cashier First National Bank.

BATAVIA, N. Y.

THE BANKERS' MAGAZINE will be pleased to receive and publish other views in regard to trust companies and banks, dealing with the matter either from the bank's standpoint or from that of the trust company officer.

STATE BANKERS' ASSOCIATIONS.

WASHINGTON STATE BANKERS' ASSOCIATION.

The eighth annual convention of the Washington State Bankers' Association was held at Whatcom-Fairhaven, July 23, 24 and 25. After prayer by Rev. Cheatham, of Whatcom, Mayor Bennett delivered the address of welcome. A. F. Albertson, Vice-President of the National Bank of Commerce, Tacoma, responded on behalf of the bankers. President Miles C. Moore, President of the Baker-Boyer National Bank, Walla Walla, then delivered his annual address. He reviewed the existing business conditions and referred to the various proposals for currency and banking legislation, pointing out that the great diversity of opinion made it exceedingly difficult for Congress to act. Governor Moore expressed the view that the ill effects of commercial and financial crises could be greatly mitigated by co-operation among banks, provided sound methods have generally prevailed.

Referring to the banking interests of the State of Washington, Governor Moore said :

"The banks of Washington show a healthy increase, both in numbers and in the volume of business transacted. The latest available statistics show that on January 1, 1903, 143 banks were doing business in the State, as against 124 January 1, 1902. Of the former there were on January 1, 1903 :

	<i>No. of banks.</i>	<i>Capital and surplus.</i>	<i>Deposits.</i>
National banks.....	34	\$5,744,290	\$34,523,910
State banks.....	6	2,833,790	17,051,100
Private banks.....	41	850,200	3,234,670
Total.....	143	\$9,428,280	\$54,814,680

In addition to the above, there are four branches of foreign banks, their capital stock and deposits not included in above.

On January 1, 1902, the 124 banks had deposits of \$39,716,400. The capital stock and surplus was \$7,792,420, an increase of twenty-one per cent. in capital stock and surplus, and thirty-eight per cent. in deposits. This, you will agree, is a gratifying showing.

The Washington banker, as far as my observation extends, compares favorably with his brethren in other States. He is wide awake and progressive, quick to seize the opportunity and profit by it. He is expanding with the expanding republic, and you can trace his financial connections to the islands of the Pacific, to the cities of the Orient, and he has even invaded the Arctic circle. He is trying to play his part in the world's progress, and to assist in America's conquest of the world's trade."

P. C. Kauffman, second Vice-President of the Fidelity Trust Company, Tacoma, submitted his report as secretary of the association. The number of members at last year's convention was 101, while at this year's convention the membership was 433.

Treasurer W. D. Vincent, Cashier of the Old National Bank, Spokane, was not present, and his report was read by Secretary Kauffman. C. J. Lord, President of the Capital National Bank, Olympia, made a brief report as chairman of the executive council.

G. B. Burke, Cashier for Messrs. Henry, Andrews & Co., Fairhaven, made an address on "Where You're At—Fact and Prophecy." He said in part :

"By way of beginning, where are you at? You are in the 'northwest' county in the United States, which has a population of about 36,000 people, more than half of whom probably reside in Whatcom and Fairhaven. You are where the first Western coal mine was supplying the Pacific Coast with coal more than a dozen years before there was such a place

as Tacoma below the snow line. You are in Whatcom county, the banner shingle county and the banner fish county in the State of Washington, almost can we say in the world; where the run of salmon and the run of logs and the run of shingle bolts build up deposits that would make a run on the bank look like a joke.

The 116 shingle mills of Whatcom county can cut enough shingles in a year to make a solid shingle belt around the world twenty feet wide, and then have a few left over to accommodate every schoolroom in the United States—and that's a fact.

Why, if you reduce a single day's cut of those mills to one solid shingle sixteen inches wide, it would keep a man busy more than a thirty-one-day month, going at the interesting pace of thirty miles a day, to walk from one end of it to the other: and he'd find that shingle no joke—it's a fact.

It would be a nice job for a Cashier to count a day's output. If he counted 300 a minute and could stand that rate for ten hours a day, it would keep him out of the banking business only a little more than 111 days—that's all, and that's a fact.

The gross earning capacity of these mills for 300 working days is not a cent less than \$5,000,000; and if we have a population of 36,000, that means \$138.32 for each man, woman and child in the county.

In 1901 the twelve salmon canneries of Whatcom county employed 5,481 persons, of whom 1,500 were Japs and Chinamen. The wages paid aggregated \$989,000, the pack was 935,000 cases, or 44,880,000 cans, and the gross earnings \$4,000,000. Whatcom county packs about seventy-five per cent. of the total pack of Puget Sound, and employs forty steamboats, twenty-five pile drivers and 500 scows and dories in its trap fisheries alone. The largest cannery in the world is in Fairhaven. It employs 1,000 persons when in full operation and can pack \$35,000 worth of salmon in one day.

The next address was by Geo. B. Brooke, President of the Fidelity National Bank, Spokane, on "The Theory and Practice of Banking."

Benjamin C. Wright, Editor of "Finance and Trade," San Francisco, delivered an address on "Bankers as Conservators of Credit." Mr. Wright's address is given below:

BANKERS AS CONSERVATORS OF CREDIT.—BY BENJAMIN C. WRIGHT.

In selecting the above phrase as the title of the little talk to be made on this occasion, I have, of course, only the ideal banker in mind. All bankers may not come up to this standard. It would be a matter both of surprise and congratulation if they did. An ideal is supposed to be framed on perfect lines. Perfection in human affairs has not yet been realized. Yet whoever adopts a lower standard is not worthy of imitation. It is only by persistent efforts to accomplish high aims that the world's progress has reached its present state of development. The results attained are sufficiently encouraging to spur one on in the pursuit for higher, better and nobler things in every walk in life. If what may be said on this occasion shall serve to strengthen an impulse to reach a level not hitherto attained along any commendable avenue, the reward will more than compensate for the effort here and now made.

The banking business is a trust proposition from start to finish. The men who form the corporation go forward with their work on the supposition that they have the confidence of the community in which the enterprise is to be launched. They rely upon the co-operation of their fellow citizens to the extent of taking some portion of the stock which they propose to issue. As soon as the doors are opened for business they expect the esteem in which they are held will induce money deposits to flow into the vaults. All these conditions may be complied with, and yet the town or city may not have a bank. The active side is when people come in to borrow some of the money which has been lodged for that purpose. It is at this point that the credit conditions reach their climax. Not a dollar can get out of the bank in this way that does not call for the exercise of this factor to a greater or less extent, based on the value of the security left in exchange for the loan.

RESPONSIBILITY OF THE BANKER.

Here is where the real responsibility of the banker begins. He has not only to keep a sharp lookout that nothing goes wrong inside of the bank, either with officers or employees, down to the last and most unimportant one on the payroll, but he must keep an equally sharp lookout on the conduct and business of his borrowers. This involves an endless detail and a tireless vigilance. The borrower has made certain statements as to his business and his ability to meet his obligation, which on their face are satisfactory to the lender, but the truthfulness of these statements is yet to be tested. The borrower may be all right at the time the loan is effected, but he, too, is environed by credit conditions which may fail to materialize as prom-

ised; and the first broken link in the chain credit puts every other link to a severer test than before, and every subsequent fracture of course puts the last link between the borrower and the lender in still greater jeopardy.

Therefore no class in the community has so great an interest at stake in maintaining sound credit conditions as the banking class. Bankers generally realize this, and it is one of the unusually heavy burdens which they have to bear. When a merchant fails, the disaster seldom affects the solvency of any other merchant, even those engaged in the same line. A manufacturer may fail, and throw out of employment a good many people, but beyond the personal loss of work the results are not serious. No banker fails to his own injury alone. For some reason not clearly understood, people hold bankers to a stricter accountability than men in other forms of business. A well-conducted bank is looked upon as about as safe an organization as can be named. Therefore when a bank does fail, confidence is shattered far and wide, and people immediately, for a time, lose faith in all banks, and very foolishly pursue a course that only tends to make the breach wider and more difficult to close.

SPECULATION FOLLOWS PROSPERITY.

Some may think words of caution at this time entirely unnecessary. I am not a pessimist, and I have no use for one. It is hard to conceive that a pessimist has any value anywhere, or at any time. But a reasonable view of conditions is appropriate at any time and in all places. The country has enjoyed an unusual era of prosperity. The wave has been more prolonged and has reached a higher mark than at any previous time in the history of the country. So long as the demand continues to expand and prices continue in the ascending scale, all will go well, despite a few occasional adverse circumstances. But unless all history is at fault, there will come a period of over-production and declining values. Once that condition is inaugurated for cause, and the tide will set the other way, for a time at least, with irresistible power. That is the lesson of experience to some and of observation to all.

Prosperity invariably produces speculation and laxity. With promptness in the payment of interest and principal, there is begotten less care in the scrutiny of men and the securities they have to offer, and a more liberal letting out of loans. No one realizes the extent to which these things obtain until the suspension of some big firm is announced. California had such a revelation on June 6, when nine banks in that State suddenly realized that heavy losses stared them in the face, principally from loans made on warehouse grain receipts, with no adequate quantity of grain in sight upon which they might recover their loans. I asked one of the banker victims, a few days later, what warehouse receipts were worth, and he said he would answer that question if I would tell him the price of old paper. Yet a week before the failure at least two banks were anxious to make loans on more of the same firm's warehouse receipts.

While laxity is a concomitant of a prosperous condition of things in the business world, rigidity is just as certain to be the rule during the reign of adverse circumstances. In either case the course naturally pursued has the same effect, and that is bad for both debtor and creditor. The happy medium that avoids both of these extremes is the only safe and wise course to pursue. The ideal banker follows an even pathway that leads neither to the mountain top nor to the deepest depths of the valley. Lending out other people's money in flourishing times ought to be attended with closer discrimination than when conditions are less propitious; in the whirl of busy traffic and the rapid accumulation of wealth few men are able to maintain their equipoise. But the banker who handles trust funds should pursue the even tenor of his way in the bright and dark days alike.

A CLOSER UNION OF BANKING INTERESTS.

To this end there should be a closer union of the fraternity, less selfishness and less competition. The only affiliations in common that bankers have with each other are through the clearing-houses and bankers' associations, and the rules which these organizations adopt for the government of their members. The clearing-house has been of much value to its members, and incidentally to non-members in the same community. It can be made of still greater utility. Banks connected with these organizations, by standing with each other, have prevented much trouble in the financial world. Every city or town having a dozen banks, or perhaps even a less number, should have a clearing-house. The influence of such an organization on the community is good. The influence on the member banks adds stability and strength, and makes uniform action along conservative lines possible.

The State bankers' association should receive the hearty co-operation of every bank; and it will when it comes to stand for something of general interest to all. Nearly every State in the Union now has an organization of this kind, many of which have only come into existence in the last ten or fifteen years. Some of the larger States have divided their State organizations into groups for more effective service and relatively better attendance. The history of these associations is not all alike nor is the work they perform of the same relative

importance. Probably not one of them has reached the best work it is able to accomplish under wise and energetic leadership, while some, it is feared, have little excuse for their existence. An association that brings things to pass which are of benefit to the banking fraternity, as well as to the general public will not lack for supporters, nor will its meetings be devoid of interest.

BANKERS AS CUSTODIANS OF CREDIT.

Bankers are not only largely the custodians of the people's money, but of the business credit of the country. They may be as helpless to make an honest man out of a dishonest one as other people, but they can do much to isolate the honest from the dishonest, both in their own ranks and also in the mercantile and industrial world. There are probably few banks in the country but what have some customers that need close watching. Indiscriminate borrowing and indiscriminate lending are twin evils, which, if they cannot be entirely eradicated, may be greatly neutralized. Bankers working in unison through the organizations already in operation, or others of a different form that may be suggested, can do much to remedy these and other existing evils; and bankers owe it to themselves and to the community which entrusts to them its funds and bestows upon them its patronage that they maintain a high standard of credit in the business world, for their prosperity is entirely dependent on the prosperity of their clients.

I am not a banker nor the son of a banker. All I know about the business has come from the outside rather than from the inside of the counter. My only experience in banking has been that which has come to me as a depositor and a stockholder. I do not owe a bank a dollar, and no bank would collapse if I should suddenly make a demand upon it for all it owes me. With such a superficial knowledge of the business, I have felt a little embarrassed in making the few suggestions incorporated in my remarks. If I may be allowed to add another, it would be this: Do not think you know it all because you are a banker. No one needs so much general as well as specific information as a banker. It is utterly impossible for you to be too well informed, and hence there is laid upon you a burden of study and of observation that is laid upon few professional men. You need to keep up an incessant watch on current events in the political, the social and the industrial world, and the effect the changes in these directions have upon values.

There is a sense in which bankers are the creators of credit as well as the conservators of credit, so there is a dual responsibility resting upon them. An organization that can create credit holds second place only to a mint where actual money is made. As conservators of credit, you are at the same time the creators of credit; and credit rather than coin is the chief factor in the world's business. A well-conducted bank is an element of confidence and strength in any community. A wisely-managed bank is certain of a prolonged and successful career. Such a bank is like well-prepared and well-preserved wine, the older the better. Managers of banks may come and go, as most earthly things do, but a bank conducted along ideal lines will go on forever, being passed down from one generation to another. There are many such banks in the older States even in this country; and it ought to be the aim of those in charge of the banks in this State to pass their organizations to the generations following in such good condition and under such wise rules of government that they will continue to exist and prosper long after those now in charge shall have passed away.

A. L. Mills, President of the First National Bank, Portland, Oregon, delivered the following address on "The Duties of a Banker:—"

THE DUTIES OF A BANKER.—BY A. L. MILLS.

Mr. President, and Gentlemen—Were I called upon to name in their order the chief duties of a banker I should say:

First—To safeguard the funds intrusted to his care.

Second—To facilitate the commerce of the community.

Third—To earn adequate dividends for his stockholders.

Fourth—To act as a conservative element in the community and to aid in moulding public opinion.

When a bank receives deposits it agrees to return them on demand unless some specific contract to the contrary is entered into. The only pact with the ordinary depositor is to return his money when demanded; failure to do so means the failure of the bank. Nevertheless for a bank to have on hand at all times the funds necessary to pay every depositor in full would destroy many of the useful functions of the bank and would convert it into a safe deposit vault. How then can a bank be so conducted that it can be reasonably sure of fulfilling its obligations to its depositors?

The merest tyro at banking or the most crassly ignorant of depositors knows that time and experience have demonstrated that a reasonable amount of a bank's deposits may be

utilized to perform the other duties of a bank. What then is a reasonable amount to so utilize, or conversely, what proportion of a bank's liabilities should be kept in cash and what disposition should be made of the remainder in order that a banker may be reasonably sure of fulfilling his duty to his depositors?

No hard and fast rule can be laid down, applicable at all times and under all conditions; at best we can but approximate. There are times when a banker can meet his depositors smilingly with but a ten per cent. reserve, and there are other times when his mind is tortured at the thought that he has not the coin in his vault to cover every dollar of his deposits. A banker cannot be a coward; he is ever sleeping on a magazine that any time may explode and wreck his institution. He is ever using, without law or license, the funds intrusted to him for safe keeping; custom may sanction such use but the law does not grant it.

What is reasonably safe banking in one section of the country is not in another, and what may be good banking in New York, for instance, may be poor banking on the Pacific Coast. To illustrate: In May, 1893, I asked Mr. Perkins, late President of the Importers and Traders' National Bank, if, in case the Security Savings and Trust Co. should be in need of funds the coming summer, could his institution grant us an accommodation on the pledge of our Government and railroad bonds?

"You may have what you want now, Mr. Mills, but what in the name of good banking are you doing with those bonds? It is not good banking to invest your money in railroad securities." I replied that we held them in order to have an anchor to windward; in order to have some quick assets in just such times as appeared near at hand.

"But you are wrong, Mr. Mills, you have a false idea of how to prepare for financial storms. Do as we do when we see our reserve running low; call in your demand loans; if that does not suffice and the drain continues, take your tickler and give instructions to collect your maturing paper."

I answered that banking in New York and in Portland, Oregon, were two entirely different propositions and principles that would apply in New York were not applicable to conditions that prevailed on the coast; that if a panic struck Portland we could call our demand loans until we were hoarse without avail, and that to force collection of maturing paper would be a confession of weakness that would act as a boomerang on the bank.

And Mr. Perkins' comment was: "Then if such is the case in Portland, I would have nothing to do with banking, and I should advise you to seek some other occupation."

No exact rules and regulations can be laid down to govern banking alike in all parts of our country. The National Bank Act attempts to do so but its cast-iron provisions are often honored in the breach. The act states, for instance, that a National bank shall not loan on real estate mortgages, and the restriction may be a good one for banks in large cities, but what country baker does not know that in our farming communities no better security can be obtained for a portion of his funds than land?

WHAT CONSTITUTES A SUFFICIENT RESERVE.

But I have wandered somewhat from the point at issue—what in our Northwest is a reasonable reserve and what is a reasonably safe use of the balance of a bank's funds, bearing in mind always that a banker's first duty is to his depositors?

Mr. Horace White, in his account of the Suffolk Bank system, writes as follows: "It was not until 1858 that the State of Massachusetts, in consequence of the panic of 1857, established a legal reserve of fifteen per cent. of specie against both deposits and circulation. Prior to the passage of the law of 1858 the specie reserve had been extremely variable, ranging from forty-four per cent. in 1843 to seven and one-half per cent. in 1851. * * * This law did not touch the other New England States, whose banks were integral parts of the Suffolk system. In 1859 Maine, Rhode Island and Connecticut each had ten per cent. of specie as against circulation and deposits, New Hampshire seven and one-half per cent. and Vermont only six per cent."

Under the present National Bank Act, in other than reserve cities, a bank is permitted to loan all but fifteen per cent. of its liabilities; of this fifteen per cent. three-fifths may be deposited in a reserve city; and the banks of a reserve city are permitted to deposit one-half of their twenty-five per cent. reserve in New York, Chicago, or St. Louis, where the National banks are required to keep but twenty-five per cent. in coin. Has it ever occurred to you how small an amount of coin is thus behind the deposits of the country? How dependent all the banks of the country are upon the resources of the great banks of New York, Chicago and St. Louis? The restrictions of the National Bank Act may, in the opinion of the framers of that law, be sufficient protection to the depositors, but does any one here think it is reasonably safe banking to have but a little over six per cent. in cash behind his deposits? And yet a compliance with the National Bank Act requires but that much coin! For instance, a National bank in Whatcom has \$400,000 deposits; of its \$60,000 reserve \$36,000 may be kept in Portland; against the \$36,000 Portland must keep a reserve of \$9,000 of which \$4,500 may be

in New York, and New York is required to keep but \$1,125 of this on hand. To meet the \$400,000 deposits in Whatcom the requirements of the National Bank Act are fulfilled with only \$29,625 cash, or a trifle over seven per cent. This may be sufficient protection for the public, but when Uncle Sam deposits his money he requires as security dollar for dollar in his own obligations. When we note how closely the banks of the country are knit together, how dependent they are upon one another, is it a matter of wonder that a panic in Wall Street is felt throughout the length and breadth of the land? Is it wise to be so dependent; should our banks not be more independent; and to do so should they not carry more of their reserve in their vaults and in near-by cities?

Is the fifteen per cent. rule of the National Bank Act a safe guide? Consider the difficulty, nay, impossibility of collecting our loans in times of panic; consider that our people will be satisfied with nothing short of gold coin when panic drives them to the bank doors; that we can not issue clearing-house certificates that pass current for the coin of the country, practically suspending specie payments as New York did in '93. Consider these facts and ask yourselves if a fifteen per cent. reserve is sufficient preparation for the evil days that are sure to return? The pendulum of prosperity swings backwards and forwards, has it almost reached the limit of good times?

To conduct a bank on a fifteen per cent. reserve and in troublous times to depend upon larger institutions for loans or rediscounts is most dangerous. In fact when a good hard panic strikes the country the larger banks are apt to call in their loans made to correspondents; self-preservation becomes the first law; every bank for itself and the Receiver take the hindmost. With the conditions prevailing here, it is the banker's duty to carry in his vaults a large amount of cash and his larger balances should be near at hand. In '93 it was extremely difficult to make collections on the banks in the East and the transfer of coin to this coast was accomplished at heavy cost and with much difficulty. At that time we had a draft for a considerable amount on a solvent Philadelphia bank. Our New York correspondent sent it back with the comment "cannot collect on Philadelphia." We returned it with instructions to present again, hold, and wire fate. Our correspondent wired, "bank will honor only in Philadelphia exchange, we cannot credit your account." We answered, "send collection by special messenger, demand the coin or close the bank." The above story is from memory, but the history of the collection is practically as I have given it. The collection was paid, but we lost many valuable days and paid a heavy exchange charge.

As I have remarked previously, no hard and fast rule, applicable to all conditions, can be laid down for the amount of reserve a bank should carry, but I believe that a bank in the Northwest, and in the light of past and existing laws, I venture the advice with much diffidence, can feel only reasonably safe with a reserve at all times of twenty-five per cent of its demand liabilities (fifteen per cent. of which at least should be in its vaults) and in addition twenty-five per cent. of its loans should be good, quick convertible Wall Street securities.

Mr. Horace White says: "It is desirable that a bank should have a portion of its interest-bearing assets so invested that it can be quickly turned into cash to meet a sudden emergency. This is especially needful in the case of a bank which holds large sums deposited by other banks, since a financial disturbance occurring in a distant quarter may bring sudden demands for cash from these depositing banks. Stock Exchange securities are held by banks partly because they can be sold at short notice to meet such emergencies, etc."

Should one however share Mr. Perkins' objections to bonds, then the bank should keep a fifty per cent. reserve. A fifty per cent. reserve seems large and not especially apt to gladden the heart of a stockholder, but I spoke advisedly when I said it was only reasonably safe. In a neighboring city, I am told, a bank went into the panic of '93 with that reserve. Its directors viewed the troubles with complacency; they made no attempt to strengthen their position; on the contrary, their cupidity urged them to take new business and their neighbors unloaded on them; before they knew it the bank was in deep water; it was too late to obtain aid and soon those ugly rumors were afloat that start no one knows where; the bank was obliged to close its doors and the Receiver performed the last sad rites.

Much more could be said of a banker's duty to his depositors, but in some lame fashion I have tried to set forth what I believe to be his duty in this respect concurrent with his other duties.

COMMERCE AIDED BY BANKS.

To facilitate the commerce of a community, I have called the banker's second duty.

Ricardo has said "the distinctive function of a banker begins when he uses the money of others." If a bank acts simply as a storehouse for the funds of its depositors, it becomes a safe-deposit vault; it ceases to perform one of its chief duties and instead locks up the funds of a community that should be used to aid the wheels of commerce.

The necessities of commerce called banks into being. At first their functions were simple; the great banks of Italy and Holland were mediums of exchange for the coins of other countries. In early days interest was a crime; interest and usury were synonymous terms. Grad-

ually the usefulness of banks became apparent and their functions extended. Prejudice disappeared and to-day it is the interest account that in most cases supports a bank. The private funds of the world are in banks and bankers rule the world. It was said years ago that no European power dare undertake war without first consulting the Rothschilds; possibly to-day it is Mr. Morgan. Hamilton recognized the functions of a bank when he planned the financial framework of our country and the removal of the public deposits in the thirties shook the country to its foundations.

As a pond is formed by many little streams and springs and the overflow is used to turn the wheels of a mill, so a bank gathers size and strength from the thousands of small depositors, and the surplus is, and should be, used to turn the wheels of commerce. Recognizing this duty, to whom and to what extent should the funds of a bank be loaned?

Those borrowers who have first claim on the funds of a bank are its depositors, those who have shown their faith in the institution, and the measure of the claim should be the value of the account.

Next are those well-established industries that go to make up the life of a community, the great lumber, wool, wheat, salmon and manufacturing interests, the great wholesale and retail houses, by whose efforts and enterprise our cities prosper.

Finally come the miscellaneous loans that are taken simply to swell the earnings of the bank, such as warrants of distant cities and counties, loans to interior merchants, and commercial paper purchased in Eastern cities.

Let us consider the class first mentioned, those borrowers who are depositors in the bank: to what extent should they be accommodated? The National Bank Act limits a loan to ten per cent. of the bank's capital, but the rule is often broken, else how could a bank like the Chemical National in New York do business on a \$300,000 capital and \$7,000,000 surplus with a limit on its loans of \$30,000? An officer of a New York bank not long since said to me "our excess loans are our best ones, and Mr. Dawes acknowledged he had usually found it to be the case."

Nevertheless the ten per cent. limitation is good and useful at times; but without injuring its efficiency, it might be stretched to include ten per cent. of a bank's capital, surplus and undivided profits; especially might this be where the borrower is a depositor, since in this case a bank usually has a portion of its loan on deposit. In some Eastern cities a customer is required, or at least expected, to keep on deposit a quarter of what he borrows, thus reducing the amount a bank has at risk.

This leads me to speak of another point of difference between the East and our coast, somewhat irrelevant I confess, but one with which we all have been confronted. How often have you been asked why you demanded such a high rate of interest when the New York banks were loaning at so much lower rate? Of course the law of supply and demand governs largely, but the slack principles we follow are partially to blame. Do we really anticipate a ninety-day loan will be paid at maturity? Do we refuse a partial payment at any time or refuse to allow a credit for interest by virtue of such payment? In fact are we not apt to call a customer "prompt pay" who, without a thought of the principal (unless he has been severely reminded) steps up to the counter and pays his interest only on the maturity of his note? I have even known borrowers to complain about paying interest accrued after the maturity of a note because they had failed to receive a dun. It is this looseness on our part, this failure to educate the public to the duty they owe the bank, that makes banking in the Northwest difficult; and it is from not understanding our loose methods that Mr. Perkins exclaimed that we did not know the principles of good banking. Were our merchants made to understand the nature of their obligations; that, unless previous arrangements were made, the note must be met at maturity, that partial payments would not receive consideration in the computation of interest, that the extent of their right to borrow would be measured by the size of their daily balance, the disparity of rates of interest between the East and the West would not be great and our banks could figure with some slight degree of certainty upon the availability of their assets in the note-pouch.

Then again another difference between banking in the East and West: In New York there is such a thing as a money market and rates of interest fluctuate with the supply and demand. There a bank's funds earn proper return when the money market is tight. How is it with us? Does the rate respond to the condition of the local money market? Is it not that our rate is constant and that loans are refused as the supply of funds diminishes? As times have grown better and money becomes more plentiful in the Northwest our ruling rate has steadily fallen, but does it ever rise with a stringency? What results? When times are good and money easy everywhere our best customers seek the lower rates of New York; when times are bad and money tight everywhere they come home to be cared for by their local banks. No one blames them, it is simply common sense to pay as little as possible for money, but it helps to complicate the management of a Western bank. However, until we grow stronger and more independent and govern our business according to prevailing conditions, the situation will remain unchanged.

I have said that next to a bank's depositors the commercial enterprises of a community have a claim on the funds of a bank.

Few banks, single-handed, can carry some of the larger enterprises of a community; because such an enterprise does not keep an account it should not be refused accommodation and the bank's funds loaned in the East. Its funds have been deposited by the community and in a measure it is a breach of trust to deprive the home community of the benefit of them. But in loaning to other than his depositors, a banker must exercise great care; he must consider well the reasons for the application; it may be but the kindly effort of a fellow banker to unload an undesirable account; if collateral is offered, the kind of collateral must be scrutinized. It has been thought that warehouse receipts for grain were the best of collateral, but note the Eppinger failure in San Francisco. It is safe to value warehouse receipts but lightly when the warehouse is owned or operated by the borrower; a criminal suit is but small compensation for lost money. An interior warehouseman often has slight conception of the difference between meum and tuum and the banker may wake to find that warehouse receipts like fiat money have nothing behind them.

A banker is often tempted to loan too freely to those enterprises in which either he or his directors are interested. If you analyze bank failures you generally find such loans to be one of the chief causes. One from whose advice and counsel I gained much in the past, Mr. Henry Failing, once said to me, "When doubtful about a loan I say to myself, 'Whose money are you loaning,' and the thought it was not my own has saved the bank from many a loss." Another remark of his was "a banker cannot afford to have friends." How many of us in a moment of weakness have loaned against our instinct money to some "good fellow" and later have mournfully placed the obligation in that collection of thumb-worn relics marked "charged to profit and loss?"

It is hardly necessary to speak of loans where an interest in the enterprise is offered as additional inducement, yet I have heard of institutions, where unless the banker was fet in on the ground floor, one could not get a loan. Such a false conception of a banker's duty is unworthy of more than mere mention.

EARNING DIVIDENDS FOR STOCKHOLDERS.

The third duty of a banker, as I have classed his duties, is that of earning dividends for the stockholders.

To earn dividends for the stockholders certainly is one of the chief duties of a banker, since without the prospect of adequate returns on the capital invested few banks would be organized; nevertheless the desire to fulfill that duty to the entire satisfaction of all the stockholders, exposes a banker to the gravest dangers.

Often the success of a bank is measured by the size of its dividends and the success of the bank is the gauge of the qualifications of the manager. Yet many a bank that pays but small dividends performs most useful functions in the community; better six per cent. dividends with all other duties fulfilled than twenty-five per cent. dividends with every available dollar loaned out at the highest rate obtainable. The devil standing behind every manager's chair, urging him to take this or that piece of risky business, to let his reserve run low, or to take chances on the future for the sake of the present, tempts him with the plaudits of his stockholders and the consequent appreciation of his services. It is hard to run safe and withstand the temptation of risky business at high rates when one's stockholders complain of small dividends.

It may be that I have spoken in a slighting manner of a bank's stockholders and given the impression that their only thought was the size of their dividends. This is true of many but there are others, and the majority, I hope, who appreciate the higher duties of a bank and who are proud to be part owners of an institution that is known to be sound to the core.

It might be inferred also that a banker performed his duty to his stockholders best when he paid them the highest dividends. This is not altogether true. His duty is best fulfilled when the bank is so conducted as to be a source of pride to them and the community; when its credit, like the Rock of Gibraltar, is impregnable; and when, be the dividends what they may, the bank performs its other functions faithfully, honestly and conscientiously.

To act as a conservative element in the community and to aid in forming public opinion, I have called the final duty of a banker.

No one can deny the great influence exerted in the community by the managers of its financial institutions. By the very nature of their calling they inspire confidence and their words are listened to with respect and consideration. Into their ears are poured the business secrets of a community and their opinions are spread widecast abroad. How carefully then must their utterances be guarded. Their calling demands conservatism; your optimist is generally a wildcat banker and your pessimist is usually the safest banker to whom to intrust your funds. Let the bankers foster every boom proposition in a city, and how long before its citizens are in sackcloth and ashes! Let others do the booming and let the bankers preach conservatism.

The bankers of a community are in its every council, members of its clubs, committees, and trade organizations; upon them more than upon any other class of its citizens rests the duty of moulding public opinion. Do we fully appreciate this responsibility? Are we careful enough of our words when we think how far they carry? Recently it was said of Mr. Williams, late President of the Chemical National Bank, that "in times of inflation he was conservative and safe; in times of financial stress, calm and strong; he was the best type of the high-minded commercial banker." Can we feel in any small measure, each of us, that such words of praise can be uttered of our endeavors?

One word more in this connection, applicable to our local condition in the Northwest, and then I shall conclude this sophomoric homily.

We all know well the jealousies of our leading cities. How contemptuously they refer to Spokane as a windbag harnessed to a waterfall; how Seattle is jeered at as famous for nothing but its padded clearings and its criminal element; how Tacoma is said to be commercially dead and living only on its past glory; how Portland is a back number in the last stages of decomposition on the muddy banks of a ditch.

Now, my friends, do we who are of so much weight in our local communities encourage this spirit, or do we stand on a higher plane than the liars and the carpers?

President Roosevelt remarked: "It can not be said too often that it is never detrimental to any section of the country to have another section built up." Do we preach this doctrine?

Do we give due praise to the men of Spokane who, undaunted by disaster, reared their city again from the ashes and whose spirit and enterprise have harnessed that mighty waterfall so that to-day its force is felt in the mines of Coeur d'Alene, fifty miles away?

Do we accord to Seattle the admiration it deserves? Blasted by fire, sidetracked by the great railroads, the indomitable spirit of its people reared a greater, nobler city on the site of the old and compelled the railroads to come suppliant to Seattle's doors.

And Tacoma, founded, fostered and aided by a great corporation, when that corporation in great measure withdrew its support, did not Tacoma's people manfully take up their burden and make of their city one of the most beautiful and active commonwealths of our Northwest?

And of Portland, my own city, do you of Washington often say a good word? Is Portland dead, is it lacking in enterprise? In three days we raised \$350,000 to exploit to the world the resources of our great Northwest. From our own pockets we have expended over \$1,400,000 to dredge out our river with never a whine to Congress for help, and within a year by our own resources we have opened to rail connection one of your beautiful valleys, the Klickitat, at a cost of upwards of a million dollars.

But, enough; the subject is one on which I could easily dilate at length, but the point is made if I have brought to your minds one of our great duties, namely, to aid in forming a proper public spirit in our own communities, a spirit of generous rivalry, a spirit of emulation, not of envy.

Let us go back to our duties with a higher conception of them if possible; let us teach and practice that in unity is strength; that our great Northwest is one country and destined to be the greatest of these United States; that there is room for all and many more; that to build up is better than to tear down; that only by working together for the good of all can we attain that growth and that position to which by all the blessings of soil and climate and geographical position we are justly entitled.

Among the other papers read were the following: "Protection for Bankers in the Negotiation of Warehouse Receipts and Similar Securities," by H. S. Griggs; "Clearing-House Emergency Circulation," by Theodore Gilman of New York (this address appears elsewhere in this issue); "Trust Companies," by Charles S. Miller; "The Country Banker," by Thomas H. Brewer; "Need of an Elastic Currency," by E. O. Graves.

P. C. Kauffman made his report as a delegate to the convention of the American Bankers' Association at New Orleans.

Resolutions were passed as follows: thanking the bankers and others for hospitalities; expressing regret for the death of ex-Vice-President White; expressing thanks to the retiring officers for their faithful and efficient services; thanking the daily and financial press for reports of the convention; also the following:

"Resolved, That the Washington State Bankers' Association express its hearty endorsement of the efforts being made to amend our present banking laws so as to provide a thoroughly scientific system of currency that will prove responsive to the requirements of business, automatically expanding and contracting according to the demands of trade and commerce, and to that end we favor a clearing-house emergency circulation."

Resolved, That the Washington State Bankers' Association is opposed to the establishment of a system of branch banking in this country."

The proposition of holding next year's convention on a steamer on a trip to Alaska and return, was submitted and considered, but on vote it was decided not to adopt the plan and President Moore's invitation to meet in Walla Walla was accepted. The exact date is to be fixed later by the executive committee. The secretary's salary was fixed at \$200 annually.

Officers were elected as follows: President, C. J. Lord, President Capital National Bank, Olympia; vice-president, W. E. Schricker, President Skagit County Bank, LaConner; secretary, P. C. Kauffman, second Vice-President Fidelity Trust Company, Tacoma; treasurer, George S. Brooke, President Fidelity National Bank, Spokane; delegates to the convention at San Francisco, E. W. Purdy, of Whatcom, and M. W. Shaw, of Seattle; alternates, A. F. Albertson, of Tacoma, and George Donald, of North Yakima. Executive committee, N. H. Latimer, Manager Dexter Horton & Co., Seattle; W. D. Vincent, Cashier Old National Bank, Spokane; E. T. Coman, Cashier Second National Bank, Colfax; J. A. Swallow, Cashier First National Bank, Everett, and George B. Burke, Cashier Andrews & Co., Fairhaven.

Excursions, receptions and other entertainments constituted enjoyable incidents of the convention.

WISCONSIN BANKERS' ASSOCIATION.

The ninth annual convention of the Wisconsin Bankers' Association was held at Milwaukee August 5 and 6. President James K. Ilsley, of the Milwaukee Bankers' Club, which had charge of the arrangements for holding the convention, delivered the address of welcome. President Field's annual address congratulated the bankers of the State on the generally prosperous conditions which have prevailed throughout the year since the previous convention. Secretary John Campbell made his annual report, which showed the membership to be 238, compared with 187 at the last convention.

Reports of the various committees were read, and a special committee was appointed to consider the matter of bank money orders.

The first paper on the programme was by Hon. James H. Eckels, former Comptroller of the Currency and now President of the Commercial National Bank, Chicago. Mr. Eckels was unable to be present, his paper being read by Frank G. Bigelow, President of the First National Bank, Milwaukee. Mr. Eckels' address was on the lines of other papers read by him before State and national conventions of bankers, ably advocating an asset currency. He said in part:

"When the invitation was extended to me to prepare an address for this convention, I accepted in the hope that I might make some suggestions worthy of the issue here to be discussed and of the distinguished body of financiers here assembled. A multiplicity of affairs crowded in upon me, however, have prevented my giving to the subject, at this time, more than the most passing consideration, and what I shall say can be but little else than a reiteration of views heretofore expressed and with which, I am sure, most of you are thoroughly familiar.

I have for a number of years been counted with those who have advocated a thorough revision and reform, if you please, of the financial and currency system of the country. In the advocacy of such changes as it seems to me would be beneficial to the whole body of the people and every character of business undertaking, I have at least tried to avoid radicalism, and have never wished to do anything that would tend to in any manner lessen either the soundness of the country's currency or invite unwise experiments. And yet because changes are urged, and present conditions looked upon with dissatisfaction, currency reformers are charged with a wish to debase our monetary system, unduly inflate the volume of our currency, and of being the willing sponsors of what are termed 'wildcat' bank notes.

In the face of the facts and in the knowledge of the power for good in an enlightened public opinion wrought by the education of economic research and the force of impartial judgment, I do not hesitate to make the assertion that Congress will not long deny the business world legislation that is so urgently required if banks are to fulfill their duties to labor, trade and commerce, and become, as they ought to be, the essential aids in the conduct of the undertakings of an industrious and intelligent nation.

I do not believe in the wisdom of hasty action, convinced though I am of the absolute soundness of a bank-note currency founded wholly upon commercial assets, but I do not believe bankers will do either themselves or the business of the country, which it is their duty to serve, justice if they do not insist that here too a first step be taken towards a reform so much needed, so misunderstood and indifferently treated.

The world of business needs here a banking system which is founded upon the laws of economic truth, freed of political thought and in accord with what best answers the purposes of daily exchange and barter. Until it gets such a system we shall fail to gather all the rewards which industry, economy and prudence should give to the American people."

A. J. Frame, President of the Waukesha National Bank, strongly opposed the issue of asset currency, except in emergencies. Mr. Frame's address appears elsewhere in this issue of the MAGAZINE.

The committee on resolutions reported the following, which were finally adopted after a discussion on the third paragraph :

Resolved, That the Wisconsin Bankers' Association approves of any reasonable amendment to improve our present banking and currency system, but we are opposed to branch banking.

Resolved, That we approve of legislation to prevent the locking up of funds in the United States Treasury.

Resolved, That we would welcome any sound solution of the vexed problem of an elastic or emergency currency, if issued through conservative channels and with restrictions insuring its prompt retirement after its work is done."

The committee on the secretary's report reported in favor of the system recommended by the secretary—a system of money orders and a protective fund for the prosecution of swindlers.

The report of the committee on nominations was unanimously adopted by the convention, and these officers were chosen :

President—John M. Holley, Cashier State Bank, La Crosse.

Vice-President—William B. Banks, President First National Bank, Superior.

Secretary—John Campbell, Milwaukee.

Treasurer—E. A. Dow, President State Bank, Plymouth.

A reception and dance and a banquet were pleasant incidents of the convention.

BANKS AND PUBLIC MONEY.—The published report that Government deposits in National banks are to be materially increased is declared by Secretary of the Treasury, Leslie M. Shaw, to be unfounded. Secretary Shaw made public the following statement on September 3 :

"I notice some newspaper accounts to the effect that I am about to increase the deposits of public money in National banks to the extent of \$40,000,000. It is true that I have \$40,000,000 available for deposits if conditions should hereafter render it expedient to make so large an increase, but for the present I am accepting only applications for small amounts that have been on file for several months, and am confining these acceptances to the agricultural districts."

BANKING AND FINANCIAL NEWS.

This department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—Carl R. Schultz was elected President of the Equitable National Bank on August 26, succeeding James M. Bell, resigned.

—On August 27 the New York Clearing-House Association completed fifty years of its existence. On August 27, 1853, a meeting of New York bankers was held in the Merchants' Bank for the purpose of arranging to establish a clearing-house. A committee, appointed to formulate a plan, reported two weeks later, and on October 11 of the same year the first clearings amounted to \$22,648,109.87, which were settled by payment of balances aggregating \$1,290,572.38. There were fifty-two banks in the association.

Between that date and January 1 last the total clearings aggregated more than \$1,000,000,000 and the total of balances to more than \$69,000,000,000. There are now fifty-six banks on the membership roll.

—Announcement is made by the Bankers Trust Company that it has leased new offices at 7 Wall street, the same that were occupied by the Hanover National Bank during the construction of its new building. The Bankers Trust Company's deposits now aggregate over \$7,000,000.

—The National Park Bank has recently issued a handsomely-printed and illustrated booklet describing its safe-deposit department. Every precaution that skill and capital could afford has been taken to make the vaults absolutely safe, and the conveniences and facilities offered for the safe keeping of securities and other valuables are as nearly perfect as could be devised.

—Plans have been completed for a new building at 60 and 62 Wall street, to extend through to 68 and 67 Pine street. The Wall street front will be fourteen stories high, and the Pine street front twenty-six stories. Part of the building will be occupied by the International Banking Corporation and the International Bank, of which W. L. Moyer is President. Both institutions are now located at 1 Wall street.

—These trustees of the American Institute of Bank Clerks were elected August 24: Caldwell Hardy, President Norfolk National Bank, Norfolk, Va.; A. H. Wiggin, Vice-President National Park Bank, New York, and Joseph Chapman, Jr., Assistant Cashier Northwestern National Bank, Minneapolis. The officers of the institute for the ensuing year are: J. B. Finley, of Pittsburg, president; George F. Orde, Chicago, vice-president; John F. Thompson, New York, treasurer, and George E. Allen, New York, secretary.

—The Trust Company of the Republic has moved from 346 Broadway to 27 and 29 Pine street.

NEW ENGLAND STATES.

Maine Bank Resources.—On August 6, Hon. Fremont E. Timberlake, State Bank Examiner, issued the annual statement of the Savings banks and trust companies of the State of Maine. There are 51 Savings banks in the State, with liabilities of \$79,724,795, divided as follows: Surplus fund, \$3,136,523; other undivided profits, \$1,803,965; deposits, savings, \$74,781,073; all other liabilities, \$3,834.

Nineteen trust companies are now doing business in the State. The total liabilities are \$18,323,884; dividend paid on capital stock, \$130,950; average per cent. 7¾. Depositors of savings deposits, 18,189; average rate of interest, 3.20.

Boston.—Herbert J. Patterson, since January 1 Vice-President and manager of the American National Bank, was elected President of the bank September 1 to succeed Samuel F. Blanchard, resigned. The directors also elected J. Middleby, Jr., and C. H. Collins, members of the board, first and second vice-presidents respectively.

MIDDLE STATES.

Yonkers, N. Y.—The Westchester Trust Company, which has been in successful operation here for several years, recently absorbed the business of the Citizens' National Bank. Peter J. Elting, who has been Vice-President of the Citizens' National Bank, succeeds John Hoag as President of the Westchester Trust Co., the other officers of which are: Vice-Presidents, Francis M. Carpenter and Howard Willets; Secretary, James E. Howes; Treasurer, John H. Keeler; Assistant Treasurer, Geo. W. Peene.

Baltimore, Md.—A recent issue of a paper called "Views," has the following, which is self-explanatory:

"Recent investigation has convinced us that the statement made in the communication published in the July issue of this journal under the caption of 'Charges Against a Baltimore Surety Company,' were without foundation. Hence this correction and apology for our credulity in publishing the material manufactured by a former employee of the United States Fidelity and Guaranty Company who had been justly dismissed from its services."

New York State Bankers' Association.—The tenth annual convention of the New York State Bankers' Association was held at Saratoga Springs, September 10 and 11. Prominent features on the programme for discussion were: "Bank Money Orders," by Joseph Chapman, Jr., Cashier Northwestern National Bank, Minneapolis; "Interest on Individual Deposits," Frederick D. Kilburn, Superintendent New York State Banking Department; "Fidelity Insurance," C. O. Austin, Vice-President National Bank of North America, Chicago.

A complete report of the proceedings of the convention will appear in the October issue of THE BANKERS' MAGAZINE.

Joint Bankers' Convention.—Maryland and District of Columbia bankers are to have a joint convention this year, the meeting to be held on a steamer on the Potomac River, beginning September 24.

New Jersey Trust Companies.—Returns of the trust companies of New Jersey, recently compiled from the official reports for June 30, show that the total resources of all trust companies are \$133,468,962, a gain of \$20,073,203 over the preceding six months. Total deposits are \$97,443,923.21, an increase of \$14,850,820 for the same period. The gain in surplus and undivided profits was \$3,508,083. The capital stock item has been increased by \$748,100, due to the formation of two new companies.

SOUTHERN STATES.

Biloxi, Miss.—By a regrettable error in the July issue of the BANKERS' DIRECTORY, no correspondents were reported for the People's Bank, of Biloxi, Miss. The principal correspondents of the bank are: National Park Bank, New York; Hanover National Bank, New York, and the Hibernia Bank and Trust Co., New Orleans. As will be seen, therefore, the People's Bank, of Biloxi, is well supplied with exchange facilities, as it is thoroughly equipped for transacting all other kinds of legitimate banking.

Georgia Abolishes Grace.—According to a recent act of the Georgia Legislature, "all promissory notes, drafts, bills or other evidences of debt, dated on or after the first day of October, 1906, shall become due and payable on the date named in the contract."

New Orleans, La.—Plans for a closer relationship between the Germania National Bank and the Interstate Trust and Banking Company are about completed. The project does not contemplate an actual consolidation. The two corporations will have practically the same shareholders and directors, though with different officers, and will work in harmony, though not engaging in the same lines. The Germania National Bank will continue as a National bank in its present quarters with its present officers and clerical staff, and the Interstate will transfer its general banking accounts and business to the Germania. The Germania will throw to the Interstate all possible business in the way of savings, safe deposit and trust work. The stock of the two will be exchanged in such wise as to reduce the capital and surplus of the Interstate to \$825,000, and to increase the capital and surplus of the Germania to \$2,250,000.

WESTERN STATES.

Chicago.—A compilation of the returns of the State banks of this city as made to the Auditor of State on August 11 shows that the deposits of these institutions have reached a total of \$230,000,000. How great this growth is may be seen from the fact that in 1890 these deposits were only \$85,000,000, and in 1898 \$113,000,000, the present figures being an increase of 100 per cent. since the latter date.

South Dakota Banks Prosperous.—Deposits in the National banks of South Dakota have increased over 100 per cent. in the past four years, according to a statement issued August 12 by George A. Silsby, National bank examiner of the State. Mr. Silsby says that in

1899 there were twenty-five National banks in the State, while now there are fifty-seven. The increase in deposits in the banks which were in existence four years ago is sixty-three per cent. The total deposits of the State are \$32,000,000, or \$71.10 per capita.

Cleveland, Ohio.—The First National Bank will absorb the Coal and Iron National Bank, the latter having gone into voluntary liquidation as a separate institution on August 15. It is the intention to increase the capital of the First National from \$500,000 to \$1,000,000.

North Dakota Bankers.—A meeting was held at Grand Forks, No. Dak., August 27 and 28 for the purpose of organizing the North Dakota Bankers' Association.

PACIFIC SLOPE.

Los Angeles, Cal.—At the monthly meeting of the directors of the Farmers and Merchants' National Bank, August 10, it was voted to increase the capital from \$1,000,000 to \$1,500,000 and the surplus from \$500,000 to \$1,000,000. It was also decided to buy property on which a modern bank building will be built.

—Geo. E. Bittering, for the past eight years Cashier of the First National Bank, Riverside, Cal., became Cashier of the Los Angeles National Bank September 1. Mr. Bittering remains a director of the First National Bank, of Riverside, and also second Vice-President, the latter office being created for him so that the bank might retain his services in an advisory official capacity.

Failures, Suspensions and Liquidations.

Arkansas.—On August 8 the Bank of Deval Bluff was placed in the hands of a Receiver, and it is reported that \$10,000 of the bank's funds is missing.

Indiana.—The private bank of Kinney & Co., at Angola, closed August 18. It is stated that an attempt to finance a trolley line caused the failure.

Minnesota.—The recent failure of the Commercial Banking Co., of Duluth, owing to a reported embezzlement by an employee, also brought about the closing of the Merchants' Bank, of Duluth, on August 14.

—The Commercial Banking Co., of Carlton, and the Bank of Cloquet closed August 18.

—The Farmers and Merchants' Bank, of Montgomery, closed August 14, with deposit liabilities of from \$50,000 to \$60,000.

New Jersey.—The Navesink National Bank, of Red Bank, closed August 14. It is estimated by the Receiver that the liabilities of the bank are \$38,173 in excess of the good assets. Individual deposits amounted to about \$295,000 and due National banks, \$105,154.

North Carolina.—The Farmers and Merchants' Bank, of Newbern, closed August 4, and a considerable shortage is reported in the accounts of the Cashier, who is said to be missing.

Tennessee.—The Stewart County Bank, of Dover, suspended August 20.

—The Bank of Henderson closed on July 31, the Cashier having lost heavily in cotton speculations, according to report. Deposit liabilities were about \$50,000.

Texas.—On August 19 the Citizens' National Bank, of Beaumont, capital \$100,000, suspended. Rod Oliver, President of the bank, was interested in several banks in Texas, including the Bank of Frost, the Groesbeck National, Allen & Oliver, Hubbard City, and the Baron Banking Co., of Thornton, all of which have suspended.

These failures are comparatively unimportant, except those at Beaumont and Groesbeck, the Citizens' National, of Beaumont, having had an extensive deposit line.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

NATIONAL BANKS ORGANIZED.

- 6896—First National Bank, Knox, North Dakota. Capital, \$25,000.
- 6899—First National Bank, Coeburn, Virginia. Capital, \$25,000.
- 6900—First National Bank, Crawford, Nebraska. Capital, \$25,000.
- 6901—First National Bank, Scribner, Nebraska. Capital, \$25,000.
- 6902—State National Bank, Little Rock, Arkansas. Capital, \$100,000.
- 6903—Staunton National Bank, Staunton, Virginia. Capital, \$100,000.
- 6904—Petaluma National Bank, Petaluma, California. Capital, \$100,000.
- 6905—Farmers' National Bank, Edinburg, Indiana. Capital, \$25,000.
- 6906—First National Bank, Henning, Minnesota. Capital, \$25,000.
- 6907—First National Bank, Sumner, Illinois. Capital, \$25,000.
- 6908—First National Bank, West Allis, Wisconsin. Capital, \$25,000.
- 6909—First National Bank, Dyer, Indiana. Capital, \$25,000.
- 6910—First National Bank, Raymond, Illinois. Capital, \$25,000.
- 6911—City National Bank, Muskogee, Indian Territory. Capital, \$100,000.
- 6912—First National Bank, Butler, New Jersey. Capital, \$50,000.
- 6913—First National Bank, West Middlesex, Pennsylvania. Capital, \$25,000.
- 6914—First National Bank, Neodesha, Kansas. Capital, \$30,000.
- 6915—Planters' National Bank, Whitewright, Texas. Capital, \$100,000.
- 6916—Blackwell National Bank, Blackwell, Oklahoma. Capital, \$30,000.
- 6917—Farmers and Merchants' National Bank, Minneota, Minnesota. Capital, \$25,000.
- 6918—First National Bank, Lake Crystal, Minnesota. Capital, \$30,000.
- 6919—First National Bank, Oroville, California. Capital, \$50,000.
- 6920—Opelousas National Bank, Opelousas, Louisiana. Capital, \$50,000.
- 6921—First National Bank, Le Sueur Center, Minnesota. Capital, \$25,000.
- 6922—First National Bank, Hughes Springs, Texas. Capital, \$25,000.
- 6923—Laurel National Bank, Laurel, Mississippi. Capital, \$100,000.
- 6924—First National Bank, O'Fallon, Illinois. Capital, \$25,000.
- 6925—First National Bank, Bridgewater, South Dakota. Capital, \$25,000.
- 6926—First National Bank, Cowgill, Missouri. Capital, \$25,000.
- 6927—First National Bank, Grangeville, Idaho. Capital, \$25,000.
- 6928—Choctaw-Chickasaw National Bank, Durant, Indian Territory. Capital, \$50,000.
- 6929—National Bank of Ellsworth, Ellsworth, Pennsylvania. Capital, \$25,000.
- 6930—First National Bank, Dickson, Tennessee. Capital, \$25,000.
- 6931—First National Bank, Yorkville, South Carolina. Capital, \$50,000.
- 6932—First National Bank, Hamilton, Kansas. Capital, \$25,000.
- 6933—First National Bank, Grand Meadow, Minnesota. Capital, \$25,000.
- 6934—First National Bank, Hallock, Minnesota. Capital, \$25,000.
- 6935—Miles National Bank, Miles, Texas. Capital, \$25,000.
- 6936—First National Bank, Harvey, Iowa. Capital, \$25,000.
- 6937—First National Bank, Webster, Pennsylvania.
- 6938—First National Bank, Hopdale, Pennsylvania. Capital, \$50,000.

APPLICATIONS TO ORGANIZE NATIONAL BANKS APPROVED.

The following notices of intention to organize National banks have been approved by the Comptroller of the Currency since last advice:

- First National Bank, Sanborn, North Dakota; by C. A. Jones, *et al.*
- Greensboro National Bank, Greensboro, Georgia; by L. O. Benton, *et al.*
- First National Bank, Erie, Illinois; by Robert L. Burchell, *et al.*
- First National Bank of Cherry Tree (Grant, P. O.) Pennsylvania; by R. F. Pitcairn, *et al.*
- Jackson National Bank, Jackson, Minnesota; by A. W. Quinn, *et al.*

Citizens' National Bank, Curwensville, Pennsylvania; by E. A. Irwin, *et al.*
 Pearsall National Bank, Pearsall, Texas; by C. H. Beever, *et al.*
 Henry National Bank, Henry, Illinois; by L. R. Phillips, *et al.*

Programme of American Bankers' Association.—The bankers of San Francisco are arranging a most interesting, instructive and enjoyable programme of entertainment. Wednesday evening there will be a steamer trip in the Bay of San Francisco to the Golden Gate, visiting the most important points of interest. Thursday afternoon a theatre party, Thursday evening an informal athletic entertainment, and on Friday afternoon a choice of trips to Mount Tamalpais, or Stanford University, Lick Observatory and San Jose, or to the Swiss Colony vineyards.

"We can positively assert," says secretary Branch in his announcement to members, "that professional criminals are selecting for attack banks not members of this association. Out of a membership of nearly 7,000 there have been 85 attacks on our members since 1896, resulting in a total loss of \$70,526.51. In the same space of time 553 non-members have been attacked, resulting in a loss of \$697,383.11. Besides our protective feature, energetic, active and watchful committees are working on the subjects of 'Education of Bank Clerks' and 'Uniform Laws.' Owing to the work of our Fidelity Committee our members are receiving annually a reduction of \$150,000 on their fidelity bonds."

The trust company section will hold a special meeting at 10 o'clock A. M. October 20 at the California Theatre to discuss matters of particular interest to trust companies. The Savings bank section will hold their meeting in the "Maple Room" at the Palace Hotel at 3 P. M. October 20. The section has prepared a most interesting programme for Savings bank men, and this meeting will, no doubt, be largely attended.

Seven hundred and forty-one banks have joined since September 1, 1902, making a total paid membership at the present time of 6,921. The officials would like to report to the next convention an addition of one thousand members. This figure cannot be reached unless the individual members of the association use their personal influence with correspondents not on the roll.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, September 1, 1903.

A FURTHER DECLINE IN PRICES AT THE NEW YORK STOCK EXCHANGE, followed, however, by a recovery in August, made a majority of stocks touch the lowest point recorded since 1901. There has probably never been so sweeping a decline at any previous time with less disastrous results than that which has occurred during the present year. When full account is taken of the extraordinary speculation which prevailed two years ago, and of the fact that ordinarily operations in stocks are conducted on a margin of ten per cent., it is one of the most remarkable features of the situation that the fall in prices last year and this has seemingly had no fatal effects.

The lowest prices of the year were recorded for the majority of stocks during the last month. A part of the decline was recovered during the last half of the month, although there has been no pronounced upward movement and the stock market at the close of the month was quiet. The extent of the decline since January 1 and the recovery from the lowest prices recorded are shown in the following table, giving a list of sixty stocks in which the declines as a rule were the largest.

	Decline from highest in 1902.	Recovery from lowest in August.		Decline from highest in 1902.	Recovery from lowest in August.

Following a heavy drop in values in 1901, there have been since January 1 declines ranging from twenty to more than fifty per cent. in more than one-half of the stocks dealt in at the New York Stock Exchange. Stocks intrinsically the most valuable have suffered equally with stocks of little or no value. There must have been very severe individual losses, yet failures have been comparatively few, and the evidence of over-trading in the past is not to be found in the record of calamities which usually result when a great rise in values is suddenly followed by an extensive break.

It is difficult to escape the conclusion that much of the speculation which raged in Wall street for so long was supplied with profits obtained in business and industries outside of the street. People have speculated with money which they could lose without inviting bankruptcy. This would account for the small measure of disaster which the decline has produced.

A casual inspection of the foregoing table will establish the fact that the declines were irrespective of the merits of the properties. As to the future of prices it would be rash to venture any prediction. There is some uneasiness evidenced, although it relates to the probable action of operators who may be disposed to work for a further decline.

Regarding the general conditions which exercise a legitimate influence upon values, it may be said that they are in the main favorable. Some uncertainty still exists regarding the crops, and at least a month must elapse before estimates regarding the corn yield will have a basis of accurate data. The crop is late and some of it is in danger of an early frost, yet a 2,000,000,000 bushel yield is still possible. The winter wheat crop is about all harvested and will probably exceed the yield of 1902 by 20,000,000 bushels. Spring wheat will make a less favorable showing, still the combined crop will come pretty close to the yield of last year. The cotton crop stands in danger of an early frost, but should it escape that menace a fair yield seems to be likely.

The money required to move the crops will probably be forthcoming without causing any serious stringency. From the course taken by sterling exchange last month it would appear that any substantial advance in rates for money would bring gold from abroad. Rates for sterling dropped very close to the gold-importing point for a while.

The Secretary of the Treasury has been making some provision for the autumn demand for money by segregating the internal receipts which he is permitted by law to deposit with National banks. He has on hand about \$40,000,000 of these receipts, which he has not turned into the Treasury, but has placed in the custody of the United States Treasurer. Should there be any pressing need for money during the next month or two it is understood that the money will be deposited with the National banks. In that event it is probable that the banks will be authorized to deposit other securities than Government bonds, as was done last year.

The Government now has a balance of \$232,000,000, of which \$152,000,000 is in National bank depositaries. An additional deposit of \$40,000,000 would still leave \$40,000,000 as a working balance in the Treasury.

The railroads continue to report very large earnings, in fact the gain shown in the first six months of the current year is the largest ever reported for a similar period. As compiled by the "Financial Chronicle," the gross earnings of 151 roads in the six months ended June 30 were nearly \$728,000,000, as against \$688,000,000 in the previous year, an increase of \$90,000,000. Net earnings, however, have failed to show a proportionate increase, being \$218,000,000, against over \$198,000,000 last year, a gain of less than \$20,000,000. When comparison is made with previous years the showing is distinctly unfavorable. The gains in gross and net earnings for the first half of each year since 1898 are shown as follows:

	<i>Increase in gross earnings.</i>	<i>Increase in net earnings.</i>
1898.....	\$19,981,689	\$17,890,035
1899.....	27,516,712	10,063,530
1900.....	70,788,316	25,126,969
1901.....	57,912,838	26,723,180
1902.....	38,904,639	7,722,906
1903.....	90,232,528	19,767,230

The increase in net earnings was only 20 per cent. of the increase in gross earnings in 1902 and 22 per cent. in 1903, while in 1898 it was 36 per cent., in 1899 43 per cent., in 1900 35 per cent. and in 1901 46 per cent.

The increase in wages and in cost of material has been an important factor in preventing the increase in net earnings. It is estimated that the railroads of the country last year paid for wages alone \$100,000,000 more than in the previous year, one-half of which represents an advance in the rate of wages.

Many of the railroads, however, make a splendid showing of earnings and surplus and several have increased the rate of dividends paid their shareholders. A notable instance last month was the Canadian Pacific, which raised its dividend from a basis of 5 per cent. to 6 per cent. per annum. Its surplus earnings applicable to dividends in the year ended June 30, 1903, were nearly \$10,000,000, as against \$7,500,000 in 1902 and \$5,600,000 in 1901.

The Union Pacific is another road which has made a very favorable report for the year ended June 30, 1903. It shows a surplus of \$15,297,243, as compared with \$14,502,594 in the previous year. After paying dividends on preferred and common stock the surplus was \$6,964,159, an increase of \$648,000 over the previous year.

It is estimated that nearly \$57,000,000 will be disbursed for interest and dividends by railroad and other corporations in September as compared with about \$51,000,000 last year, \$40,500,000 in 1901, \$38,000,000 in 1900 and \$28,500,000 in 1902.

An interesting event of the month was the advance in the price of silver to the highest point reached in nearly two years.

The question of currency legislation by the approaching Congress has received considerable attention recently by men prominent in the affairs of the Government. At the present time there seems to be little prospect of any important action by Congress, if for no other reason than that it is not good politics to meddle with so important a subject as the currency on the eve of a presidential campaign. The policy of letting well enough alone is one which appeals very strongly to statesmen at a time when they are about to appeal to the suffrage of their constituents.

It will be difficult to convince many that legislation is necessary. There has been a very great expansion in our circulating medium in recent years. The money in circulation now exceeds \$3,880,000,000, an increase in one year of \$120,000,000 and of more than \$530,000,000 in the last five years. A considerable part of the increase has been in National bank notes, and the limit of expansion in that direction has again been reached. There was an increase in that portion of our currency of \$55,000,000 in the past year and of \$177,000,000 since 1898. Statistically there is plenty of money and this fact is of itself an obstacle in the way of securing legislation as to the currency even on reformatory lines.

While there are very serious defects in our currency system, and it is admittedly unscientific, it is nevertheless true that the currency as a whole has been put upon a more solid basis than supported it a few years ago. And this is the fact notwithstanding that the tendency is to make paper the sole currency in use. Coin except in fractional denominations is little used. Of \$1,255,000,000 gold coin estimated to be in the country only about \$620,000,000 is in circulation and one-half of that amount is in the possession of banking institutions. Of \$555,000,000 silver dollars in existence only about \$70,000,000 is outside of the United States Treasury. In the last five

years the increase in gold and silver certificates and National bank notes has raised the proportion of paper to sixty-seven per cent. of the total, an increase of ten per cent. In the following table the amount of the various forms of money classified as to paper and coin, is shown during five-year periods since 1878 :

	June 30, 1878.	June 30, 1883.	June 30, 1888.	June 30, 1893.	June 30, 1898.	June 30, 1903.
Legal-tenders...	\$274,660,895	\$310,182,177	\$294,282,812	\$320,875,683	\$286,572,829	\$336,591,372
Currency certif.	48,245,000	13,060,000	14,415,000	11,935,000	28,045,000
Treas. notes, 1890	140,661,694	98,665,580	19,119,870
Gold certif.	24,897,680	59,807,370	119,887,370	92,970,019	35,820,689	379,043,889
Silver certif.	7,080	72,620,686	200,987,376	326,489,185	360,659,060	455,079,538
Nat. bank notes	310,129,887	347,856,146	245,149,720	174,731,139	223,129,103	400,406,189
Total paper...	\$655,940,542	\$808,525,379	\$874,122,278	\$1,067,662,700	\$1,080,892,331	\$1,590,232,658

Silver dollars....	855,143	35,341,880	55,545,903	57,029,743	57,295,791	72,849,406
Fractional silver.	64,918,322	52,474,299	50,364,635	65,400,268	64,333,747	92,195,600
Total coin.....	\$150,513,239	\$432,469,674	\$467,966,782	\$526,063,711	\$782,543,418	\$786,690,552
Total currency.	806,453,781	1,236,995,053	1,372,089,070	1,593,726,411	1,843,435,749	2,376,923,210

The proportion of paper money in 1878 was eighty-one per cent. of the total, but at each of the other dates mentioned in the table it was less than in 1903. In five years last past the increase in paper was nearly \$530,000,000 and in coin less than \$4,000,000. While, however, the ratio of paper has increased our currency has been steadily approaching a gold basis. Nearly fifty per cent. of our currency is now secured by gold, while of the remainder one-half is based on silver and about one half is unsecured, or based upon Government bonds. In the following table is shown the amount of our circulating medium based on gold and silver and the amount not so secured :

JUNE 30.	BASED ON GOLD.		BASED ON SILVER.		NO SPECIE BASIS.	
	Amount.	Per cent.	Amount.	Per cent.	Amount.	Per cent.
1878.....	\$109,637,454	13.59	\$65,780,545	8.16	\$631,035,782	78.25
1883.....	404,460,895	32.72	160,436,895	12.96	671,097,323	54.80
1888.....	511,964,224	37.81	306,287,314	22.32	553,847,532	40.37
1893.....	498,603,719	31.16	589,580,870	36.99	507,541,822	31.85
1898.....	698,790,519	37.80	610,908,198	33.14	535,747,082	29.06
1903.....	1,150,589,085	48.42	638,734,614	26.88	596,999,561	24.70

For 1903 we have counted \$150,000,000 of legal tender notes as based on gold, the act of 1900 having established a gold reserve of that amount which the Secretary of the Treasury is required to hold against those notes. More than \$1,150,000,000 of our currency now consists of gold coin or paper against which gold is held for the full amount of the notes. The ratio has increased from 13.59 per cent. to 48.42 per cent.

Silver coin or paper issued against silver is now only 26.88 per cent. of the total, as against 33.14 per cent. in 1898 and 36.99 per cent. in 1893. The notes having no specie basis represent only 24.70 per cent. of the total, and the ratio has steadily declined since 1878 when it was 78.25 per cent. As \$400,000,000 of these notes are issued by the National banks which have deposited Government bonds as security, only about \$186,000,000 or eight per cent. are unsecured.

Some bank failures have occurred during the past month caused by bad investments or by individual dishonesty. Confidence in the banks of the country has not been shaken, however, and at no previous time have they apparently been financially

sounder than now. We are largely dependent upon the reports of the National banks for data which comprehend the banking interests of the entire country and these indicate that in the recent years of prosperity those institutions have greatly strengthened their position.

The accompanying table shows the capital, surplus and undivided profits, deposits including amounts due banks but not Government deposits, and cash and reserves including amounts due from banks, as or about July 1 yearly since 1892 :

JULY 1.	Capital.	Surplus and profits.	Deposits.	Cash, reserves and due from banks.
1892.....	\$684,678,208	\$328,467,960	\$2,309,166,290	\$918,925,292
1893.....	685,786,719	343,082,950	1,921,654,226	733,336,526
1894.....	671,091,165	330,296,968	2,211,565,188	984,930,304
1895.....	658,224,180	329,004,137	2,162,695,095	898,562,861
1896.....	651,144,855*	331,851,631	2,122,715,462	801,286,103
1897.....	632,153,042	330,267,222	2,367,465,370	962,199,783
1898.....	622,016,745	332,971,643	2,743,174,001	1,128,870,668
1899.....	604,865,327	342,321,752	3,454,562,376	1,428,227,108
1900.....	621,533,461	391,547,835	3,520,997,161	1,401,766,345
1901.....	645,719,099	416,739,818	4,148,653,821	1,681,500,988
1902.....	701,990,554	482,377,443	4,341,775,408	1,685,430,370
1903.....	743,506,048	542,183,538	4,413,240,002	1,633,065,740

Since 1895 the ratio of surplus to capital has increased each year. It was only forty eight per cent. in 1892, fifty per cent. in 1893, forty nine per cent. in 1894, and fifty per cent. in 1895. By 1899 it had increased to fifty six per cent. and in 1900 it was sixty-three per cent., in 1901 sixty-five per cent. in 1902 sixty-eight per cent., and in 1903 seventy-three per cent. Compared with 1892, while the capital increased only \$59,000,000, the surplus increased nearly \$216,000,000.

In 1899 the capital of the National banks had fallen to a very low point, but since that time it has increased \$139,000,000 while surplus increased \$200,000,000. The growth in capital and surplus of the National banks has not, however, been in proportion to the increase in deposits, the latter having made a phenomenal gain. In 1892 the deposits were \$2,309,000,000 but they fell to \$1,921,000,000 in the following year and in 1897 were very little larger than in 1892. Since 1897 they have increased rapidly and in 1903 they were \$4,413,000,000, an increase of \$2,104,000,000 since 1892 and of \$2,046,000,000 since 1897.

The ratio of capital and surplus to deposits was forty-three per cent. in 1892, fifty-four per cent. in 1893, forty-five per cent. in 1894 and forty-six per cent. in 1895 and 1896. It fell year by year until 1901 when it was down to twenty-five per cent. but it increased to twenty-seven per cent. in 1902 and to twenty-nine per cent. in 1903. It is now fourteen per cent. less than in 1892.

The ratio of cash and reserves, including amounts due from banks, has been maintained at about forty per cent most of the time, falling to thirty-eight per cent. in 1893 and 1896. The highest ratio was in 1894 when it was forty two per cent. In 1895, 1897, 1898 and 1899 it was forty-one per cent., in 1900 and 1901 forty per cent., in 1902 thirty-nine per cent. and in 1903 thirty-seven per cent. The ratio at the present time is the lowest reported in any year at the corresponding period since 1892.

THE MONEY MARKET.—Rates for money on call have declined, but time money has been firm at higher figures than ruled a month ago. Little commercial paper is offering, less than is usual at this season of the year, merchants obtaining discounts direct from their banks. At the close of the month call money ruled at $1\frac{1}{2}$ @ 2 per cent., the average rate being $1\frac{3}{4}$ per cent. Banks and trust companies loaned at 2 per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 5 @ $5\frac{1}{2}$ per cent. for 60 to 90 days, $5\frac{1}{2}$ per cent. for 4 to 5 months, and $5\frac{1}{2}$ @ 6 per cent. for 6 months on good mixed collateral. For commercial paper the rates are 6 per cent. for 60 to 90 days' endorsed bills receivable, 6 @ $6\frac{1}{2}$ per cent. for first-

class 4 to 6 months' single names, and $6\frac{1}{2}$ @ 7 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The clearing-house banks of New York reported at the close of August an aggregate of loans of \$928,000,000. This is an increase for the month of more than \$14,000,000 and is a larger amount than was ever reported at a corresponding date in any year. Compared with a year ago there is an increase of \$13,000,000. Deposits increased about \$10,000,000 during August, but they are nearly \$16,000,000 less than they were a year ago, and \$48,000,000 less than two years ago. In 1902 deposits decreased \$21,000,000 in August. Loans are still some \$3,000,000 in excess of deposits. A year ago deposits exceeded loans by \$25,000,000. The surplus reserve was reduced \$3,000,000 during the month, but is nearly \$11,000,000 more than it was a year ago.

FOREIGN EXCHANGE.—The sterling exchange market was alternately weak and strong, being influenced first by purchases of American securities for foreign account and subsequently by sales. The supply of commercial bills is small, and cotton bills are likely to be delayed for another month.

MONEY RATES ABROAD.—There was no change in the official rates of discount of the leading European banks last month. The Bank of Bombay on August 20 reduced its rate from 4 to 3 per cent. Discounts of 60 to 90 day bills in London at the close of the month were $2\frac{1}{2}\%$ @ $3\frac{1}{2}\%$ per cent. against $2\frac{1}{2}\%$ @ $2\frac{1}{2}\%$ per cent. a month ago. The open market rate at Paris was $2\frac{3}{4}\%$ @ $2\frac{1}{2}\%$ per cent. against $2\frac{1}{2}\%$ @ $2\frac{1}{2}\%$ per cent. a month ago, and at Berlin and Frankfort $3\frac{1}{2}\%$ per cent. against $3\frac{1}{4}\%$ a month ago.

Fine gold bars on the first of this month were at par to ¼ per cent. premium on the Mint value. Bar silver in London, 26¼d. per ounce. New York market for large commercial silver bars, 57½ @ 59¼c. Fine silver (Government assay), 58½ @ 59¼c. The official price was 57¾c.

GOVERNMENT REVENUES AND DISBURSEMENTS.—Surplus receipts of \$6,828,133 in August bring the deficit for the first two months of the new fiscal year to \$948,480 and that will probably be wiped out during the current month. Custom receipts in August were \$1,400,000 less than a year ago but internal revenue receipts increased \$1,700,000 and miscellaneous receipts about \$1,000,000. Expenditures show a decrease of about \$100,000.

NATIONAL BANK CIRCULATION.—There was an increase of \$1,241,488 in amount of National bank notes outstanding last month. The increase in circulation based on Government bonds was \$2,469,496, while the circulation based on lawful money deposits was reduced \$1,228,008. The National banks now have \$381,486,430 of bonds deposited to secure circulation and \$152,614,520 to secure public deposits. Nearly \$179,000,000 of the bonds so held are two per cents of 1930. There are still \$16,000,000 of State and city bonds on deposit as security for Government deposits.

Three per cents. of 1898.....	2,391,820	2,368,820	2,179,880	2,153,580
Two per cents. of 1900.....	359,583,100	367,400,960	372,642,650	374,103,350
Total	\$387,827,920	\$375,347,270	\$380,173,030	\$381,486,430

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, \$4,578,900; 5 per cents. of 1894, \$4,994,450; 4 per cents. of 1895, \$10,442,550; 3 per cents. of 1898, \$7,059,530; 2 per cents. of 1900, \$104,867,200; District of Columbia 3.65's, 1894, \$1,699,000; State and city bonds, \$16,083,900; Philippine Island certificates, \$2,989,000, a total of \$153,614,530.

UNITED STATES PUBLIC DEBT.—There was no change in the aggregate bonded debt in August but about \$300,000 of bonds were exchanged for 2 per cents. A reduction in the National bank redemption fund of about \$1,000,000 and an increase in the net cash balance in the Treasury of \$5,000,000 made the net public debt \$6,000,000 less than it was a month ago, leaving it below \$924,000,000. The cash balance exceeds \$383,000,000 an increase of \$19,000,000 since January 1.

UNITED STATES FOREIGN TRADE.—With the exception of June and July, 1902, the exports of merchandise in July, 1903, were the smallest reported for any month since April, 1899. The total value was \$91,539,400, a decrease from June of \$3,600,000, and \$56,000,000 less than in December last. They were nearly \$3,000,000 larger than in July last year, but were less than in the same month in either of the previous

three years. Imports of merchandise in July were valued at \$82,180,387, an increase over those of the same month last year of \$3,000,000 and \$9,000,000 more than in July, 1901. The net balance of exports was only \$9,359,018, the smallest reported in years. Nearly \$4,500,000 of gold was exported net during the month, but silver exports amounted to only \$451,209. For the seven months of the present calendar year exports of merchandise show an increase of \$62,000,000 over last year and imports nearly \$49,500,000, the net exports showing an increase of about \$2,750,000. Gold exports in the seven months were nearly \$22,000,000 against \$18,000,000 last year.

BANKERS' OBITUARY RECORD.

Brown.—R. E. Brown, Cashier of the Citizens' Bank, Van Buren, Ark., died August 12.

Conrow.—James Conrow, formerly Vice-President of the Astor Place Bank, New York city, died August 26 at Greenwich, Conn. Mr. Conrow was born in New York, February 28, 1836. Early in life he engaged in hat manufacturing, afterwards becoming interested in banking. He became President of the Empire State Bank, and later Vice-President of the Astor Place Bank. He continued in that position until the Astor Place Bank was consolidated with the Corn Exchange Bank.

George.—Samuel George, President of the Wellsburg (West Va.) Banking and Trust Co., died August 6, aged seventy-six years. He was a member of the State Senate and was interested in many large business undertakings.

McCamant.—Joel B. McCamant, one of the organizers of the First National Bank, South Bethlehem, Pa., died August 8, in his eightieth year.

Miller.—John D. Miller, Vice-President of the Rutland County National Bank, Rutland, Vt., died July 27. He was born in Wallingford, Vt., in 1855.

Mr. Miller was prominently identified with many business and financial institutions in the part of the State in which he resided. He had for many years been a director and Vice-President of the Rutland County National Bank, and was a director of the Proctor Trust Company at Proctor, a trustee of the Marble Savings Bank, of Rutland, and was interested in several other enterprises in that vicinity, and also had large interests in the West.

O'Connor.—John H. O'Connor, former President of the State National Bank, New Orleans, and for many years one of the leading business men of that city, died recently in Canada, where he had gone in search of health.

Prickett.—Col. Francis A. Prickett, one of the best-known citizens of Southern Illinois, ex-mayor of Carbondale, and formerly secretary of the board of trustees of the Southern Illinois State Normal University, colonel on the staff of Gov. Joseph W. Fifer, and President of the First National Bank, of Carbondale, died August 31.

Col. Prickett was born in West Virginia, October 27, 1842, but spent the most of his life at Carbondale. He was a thirty-third degree Mason, and for years figured prominently in the politics of his section.

Prindle.—Lewis E. Prindle, who was connected with banking at Kansas City, Mo., for many years, died August 8. Mr. Prindle was born in Michigan in 1831. He located in Kansas City in 1865, where he practiced law for some time. In 1868 he accepted a position with the old First National Bank. After remaining with that bank for several years he became Cashier of the Armour Bros. Banking Company. In 1875 he became Cashier of the Midland National Bank, which was recently consolidated with the National Bank of Commerce. When the two banks consolidated Mr. Prindle remained with the bank and took charge of the liquidations and assets of the Midland Bank. He held this position at the time of his death.

Scott.—Aaron B. Scott died August 4 at Utica, N. Y., aged ninety-one years. Mr. Scott was for a number of years Cashier of the National Hudson River Bank, Hudson, N. Y.

Shields.—John W. Shields, who for the past twenty-one years was Cashier of the First National Bank, Roanoke, Va., and one of the well-known banking men of the State, died August 23, aged fifty-four years.

Smith.—John H. Smith, who founded the First National Bank, San Bernardino, Cal., died August 9 aged sixty-eight years. He was a native of West Virginia, but in 1880 he went to California, establishing banks at Santa Ana, Pomona and San Bernardino. He organized the First National Bank, of San Bernardino, in 1887 and was for several years its President.

Sutcliffe.—Dr. John E. Sutcliffe died July 23 at Louisville, Ky., aged eighty-three years. He was one of the incorporators of the Louisville Banking Co., now the Louisville National Banking Co., and was at the time of his death Vice-President.

Wilson.—Hudson Wilson, President of the Citizens' National Bank, Faribault, Minn., died July 26. He was born in Ohio, and in 1857 located in Faribault, where he opened a private bank. In 1871 the Citizens' National Bank was organized, Mr. Wilson becoming President, and continuing to hold the position until his death. He was one of the oldest bankers in point of continuous service in the State, and was widely known and respected.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SEVENTH YEAR.

OCTOBER, 1903.

VOLUME LXVII, No. 4.

THE COMMISSION ON INTERNATIONAL EXCHANGE—composed of Messrs. H. H. Hanna, Charles A. Conant and Jeremiah W. Jenks—have returned to the United States, and some official announcement regarding the results of the work accomplished ought soon to reach the public.

There seems to have been more or less misunderstanding on the subject of their mission, growing probably out of its somewhat technical character and the fact that it differs considerably from that of previous commissions on monetary problems sent to Europe by the United States. Many people have jumped to the conclusion that another effort was being made “to do something for silver” from the bare fact that a commission had been appointed. There is force, however, in the suggestion of one of the members, in a recent communication to the press, that the present body is essentially a gold commission, because its chief object has been to introduce the gold standard into China.

It would be of great economic and commercial importance, as has been several times pointed out by THE BANKERS' MAGAZINE, if China could be put upon the gold basis. The project is a somewhat novel one, but its discussion has been stimulated within the past year by the adoption of the gold standard in the Philippines and by the violent fluctuations in the gold price of silver. It is these fluctuations which have upset exchange and almost demoralized the trade of China with foreign countries. If the fluctuations of exchange could be cured, commerce would be encouraged, loans could be made in China without the present probability of shrinkage in their gold value, and permanent investments would become profitable for the same reason. The Philippine Government has taken the bull by the horns, and its new silver currency, issued on a gold basis, is rapidly coming into circulation. The British Government has taken the

first steps towards a similar policy in the Straits Settlements by calling in the old coin and preparing for a new one, and the French Government has entered upon the same path in Indo-China.

The adoption of a gold standard in China is a more difficult task than in the dependencies of the European governments, and has seemed to some to be too difficult to be undertaken. There can be no doubt, however, that the tendency of the times is towards gold, and that sooner or later China must follow Europe and America and their colonies in the East if she is to become a progressive commercial country. Even if the solution of the problem proves slow and difficult, however, the American Commission are probably justified in their belief that the time has come to make a beginning.

THE POINT HAS BEEN SEVERAL TIMES MADE in discussing the request of Mexico and China for the co-operation of the United States, that they were asking co-operation upon a subject on which independent action each for herself would alone meet the requirements of the case. There are reasons, however, of a diplomatic and economic character which, according to their published statements, governed the American and Mexican Commissions in their negotiations in Europe.

In regard to China the problem presents diplomatic difficulties as well as those of a purely monetary character. If the United States should undertake of her own motion to put China on a gold basis, through the offer of expert advice and financial assistance, it is probable that she would find herself confronted with the opposition, open or concealed, of every other leading power. They would justly feel that any one nation which undertook without consultation to prepare a plan for the finances of China was likely to prejudice the diplomatic and commercial prestige, if not the rights, of other powers. It has been chiefly, we presume, to remove this obstacle that the American and Mexican Commissions have discussed the problem of the Chinese currency in Europe. Apparently they have been successful in their essential object of securing endorsement for the principle of a gold-standard system in China. It does not matter so much whether differences of opinion have developed in Europe over the details, because the details are not likely to be settled until the subject has been much more thoroughly canvassed than it has yet been.

The American Commission has apparently bent its efforts to convincing the European governments that the action of the United States was disinterested, that it would involve important economic benefits to the exporting nations by affording them an easier access to Chinese markets, and that the adoption of a stable standard was

practicable. In these objects the commission seems from all reports to have been eminently successful. Prof. Jenks is going to China as the delegate of the American Commission to endeavor to crystallize the progress already made into a definite and workable plan acceptable to the Chinese Imperial Government. While his mission will undoubtedly meet with difficulties and delays, the spirit thus far shown by China and her diplomatic representatives seems to augur well for ultimate success.

Mexico is capable of looking after her own monetary affairs, "without the aid or consent," as Mr. Bryan would say, "of any other nation." Her leading statesmen have practically decided to establish the gold standard. Their desire to discuss the matter, however, with the representatives of other countries is normal and reasonable. There are strong reasons why a certain harmony of action should be secured in the coinage ratio of the Oriental countries between gold and silver. Similarity of ratio does not imply similarity of unit, although there seems to have been confusion in some quarters on this point. In those countries which may give a low coinage value to silver, similarity of ratio is desirable, in order to guard against the effects of fluctuations in the price of the white metal.

If silver should rise in price above the coinage ratio, then the coins would go to the melting-pot and the currency system would be destroyed. To prevent such a disaster in the Philippines, in the Straits, in Indo-China or in Mexico, the American Commission seem to have taken the ground that a common ratio should be fixed and that purchases of silver for coinage purposes should be suspended in all these countries when that ratio was reached. The suspension of purchases of silver would check the rise in price and maintain the equilibrium between supply and demand. It is within the power of Mexico or any other government of good credit to maintain a token currency far above its bullion value as is done by the United States and the countries of the Latin Union, but there are strong reasons, which have been urged in Europe, why steadiness in the price of silver, even under the limping standard, contributes its share towards stability of the currency.

MEXICO HAS ANOTHER INTEREST of importance in the international discussion of the question which the United States has not shared to the same degree. This interest of Mexico grows out of the fact that her exports of silver constitute about forty per cent. of her total exports. When the discussion of the monetary reform began she had to confront the problem whether her adoption of the gold standard would not exercise such a depressing influence on the price

of silver as to impair the value of her exports and create an adverse balance of trade, which would drain away her gold and impair, if not defeat, the benefits of the reform. In seeking to avert such a catastrophe it is not surprising that she should look for new markets for silver.

Mexican statesmen wisely rejected the belief that that they could gain anything more through the channel of free silver coinage in their own country or any other. If, however, the monetary systems of China and other silver-using countries could be put upon a stable basis, which would result in the expansion of their trade and an increased demand for currency, a market would be created for silver for coinage purposes larger than that which now exists. This consideration appears to be the only silver lining in the golden cloud of the Mexican programme. Sensitive as the American public has become to any plan to promote the interests of silver, it is not apparent that the policy of Mexico is open to serious objection.

If new markets are created for silver by reason of the enhanced prosperity which demands an increased volume of currency in countries where a large quantity of subsidiary money is required, there is no obvious reason why the strongest friend of the gold standard should object to this incidental benefit to the white metal. The gold standard has come to stay in Europe and America, through a succession of victories in one country after another within our own generation. If it can win further victories, even with some incidental enlargement of the demand for silver token coins, the result will be to promote commerce and investment opportunities throughout the world by giving to those countries which are entering the circle of commercial nations the common standard of those which have long had a place there.

WHAT WILL BE THE EFFECT of the acquisition of the Sandwich and Philippine Islands and of Porto Rico on the business customs, and especially banking, in the United States, may perhaps be a premature question. Conditions are not yet sufficiently settled, nor from the distance of these possessions and the small proportion their population bears to all who now live under the American flag, does it now seem more likely that appreciable effect can be produced than that the inhabitants of the moon can have any effect upon those of the earth. But ideas are often powerful beyond expectation, and even now in the world of politics apprehensions are at least affected that the spirit of domination which often is consequent on conquest will produce in the long run results that will tend to change the free institutions of the United States for the worse.

The attempt to graft branch banking upon our system certainly gained its greatest strength immediately after the Spanish war.

Whether the advocates of modifying our present system by making branch banking possible were influenced first by the thought that our bankers ought to be facilitated in extending their business in these new possessions or not, is an open question but one which must reasonably be answered in the negative. Nevertheless, there are some considerations that point to the conclusion that the possibility of colonies and outlying territory suggested that in financing the various enterprises our citizens might undertake in the new and distant territories, it might be very convenient to have some addition to our banking machinery. .

The opposition to branch banking, whatever the motives that led to its advocacy in Congress, which immediately manifested itself, indicated that no opportunities which it might afford in colonial finance would compensate for the disadvantages which it would cause at home.

But whether the desire for branch banking may have been one of the manifestations of the influence of our foreign possessions on banking at home or not, there are other ways in which as time goes on our banking ideas may be influenced. Both in the Philippines and in Porto Rico are banking institutions, doing business under old Spanish charters, which have vested rights and are likely to continue. Our business men going to these places will be quick to learn the difference between these colonial methods and those they are accustomed to. It is hardly possible that banks on the American plan, such for instance as our National banks, can compete with the Spanish banks which have the right to use bank notes to an almost unlimited extent, owing to the monopoly which they virtually possess. It is not impossible that a desire to do business with the margin of profit which these banks in these islands enjoy may sooner or later lead to modifications in our own system. These modifications may be connected not only with bank notes but with the manner of making loans and advances on property, and may be advantageous or otherwise; but it is believed that it will be better to avoid the possible danger of impairing the usefulness of our present system by such innovations as might be suggested by the practices of banks on the Spanish monopolistic plan by doing away with these institutions after fair compensation for their vested rights. In favor of the abolition of foreign banking methods in the Philippines, the welfare of the people of those islands is an important argument.

The superior success of this country in the development of its resources is due more to the free banking facilities extended by our system than to any one other factor. The marvelous growth of the United States as a nation has been ascribed to various causes—to our great territory, to the natural resources contained within this terri-

tory, to the energy of the people, and to free institutions. Every one of these qualifications, except the last, has existed, and perhaps still exists, in other countries. The territory of Russia is as great, and natural resources are perhaps not inferior. The energy of a people is not properly a quality peculiar to race. It depends on opportunity. Given a chance to better their material condition, and any race will show energy. Given the chance, any race will seek to enlarge its intelligence. In the United States almost every race is represented, and whatever they are at home when they come to the United States they equal and sometimes surpass those who were before them. Give any race an equal chance to work for suitable reward, and energy and intelligence, and even the desire for higher education, will follow.

In free institutions the United States is held to excel, but it is doubtful whether in practice the right of the individual citizen to gain his living is any better protected than in other countries where the government is more despotic. The despot in the United States is public opinion, and individuals and races are, in various ways, oppressed by it and vainly seek protection from it.

The one thing in which the United States affords a better opportunity than any other country to get rich is in the ease with which any man can obtain capital to work with. This is due to our free banking system. Every honest man, every capable man, can on due proof of his honesty and capability obtain the help he needs to encourage him to exert himself. It is the sum of this encouragement that creates the energy which is said to characterize American citizens. It may be admitted that respectable instances, adverse to this theory may be adduced, but on close analysis of the various activities and the various inactivities of individuals and races, and even of their varying degrees of intelligence, it will be found that the encouragement given or withheld by opportunity or lack of opportunity is the secret of individual and race energy or the contrary.

Nothing has enlarged opportunity or the power to seize opportunity like the power to use capital at reasonable rates. This is what a free system of banking gives. It may be further said that no country in the world possesses a system of banking so well calculated to aid the average citizen to improve and to create opportunity as ours.

Financial writers, like the historians, are apt to enlarge on the great kings and leaders of finance and their great exploits in the financial field, but there is little said about the homely and minute services which are rendered to the millions of average toilers by a good system for distributing capital where it is needed. Finance has been too much devoted to the purposes of those who would wring money from the people for public and private ends. It is not pretended that

the free bankers of the United States are philanthropists or that they furnish benefits for nothing, or that they do not to the best of their ability line their own pockets; but where any capitalist can become a banker competition forces a generosity which answers the same purpose as if it came from the heart.

If, then, this country is to do all that it can for the inhabitants of the Philippine Islands, if they are to be improved in energy, in intelligence, in the desire and power to develop their resources, why not give them the instrument which has proved so effective here at home? Do away with the monopolistic banks, which deal only at arms' length with the people through middlemen and usurers, and encourage the small capitalist by letting him use his money in his immediate vicinity. Nothing will develop the people of the Philippines and the resources of their islands like putting them in the way to create their own capital and use it among themselves. A system under Government supervision, modelled not on our National system but on the State banks, would be the best to start with. As the country grows in wealth some features of the National system might be introduced, but on no consideration permit anything in the nature of an asset currency. When favorable opportunities are afforded nothing more will be heard of the lack of energy of the Filipinos.

THE AMERICAN INSTITUTE OF BANK CLERKS recently held its first convention, at Cleveland, and the meeting is reported to have been a great success. This organization of bank clerks was started by the efforts of the American Bankers' Association. The idea was to direct the attention of the employees of banks to the advantages that might be expected to accrue, both to the banks and to the employees, from a system which encouraged educational training in finance and banking outside of the ordinary routine of business.

As banking became more specialized, or as individual banks became larger and more complicated institutions, the work of the individual clerks is apt to be confined to narrower spheres. In a small bank one man frequently performs many duties, and he learns to be an all-round man as far as the business of that particular bank is concerned. He may be teller, accountant, messenger and janitor, all combined. He is the confidant of the manager or President and learns all about the art of gaining deposits, making loans, and doing whatever adds to the dividends of the stockholders and the strength of the bank. But the small bank cannot teach to its factotum all that there is of banking. The large central bank, with its train of correspondents, fills a much greater sphere and affords opportunity for viewing a wider horizon of the banking world, but in such an in-

stitution the work is specialized and the ordinary employee seldom in the course of business gets the opportunity to look beyond the cage that contains his immediate and pressing duties. Nor to day is even the largest bank a perfect school of financial knowledge. Since cosmopolitan financial dealings are now an important part of finance, involving private and public borrowings and lendings, to learn all there is to know by personal experience is out of the power of the ordinary clerk or employee. It is, of course, within the power of men of exceptional ability, or who are placed in exceptionally favorable circumstances, to make financial leaders of themselves by what may be called practical experience. The millionaire financier may train his sons or proteges in this way when they show aptitude and ability, but the ordinary clerk who commences life with no specially favorable opportunities has less chance to advance than was once the case. Opportunities to rise cannot be grasped because he has been narrowed by a multitude of special duties.

The American Bankers' Association some years ago sought to arouse the minds of both bank managers and clerks to the importance of studies bearing on the general subject of banking and finance to the great body of those engaged in the banking business. The necessity and advantage of education, both in a broad sense and in a technical sense, to the members of the banking fraternity was earlier recognized in other countries than in the United States. This was due both to the greater experience that older countries acquire, to the difference in the system of banking, and to a certain extent to the greater prevalence of caste. The latter consideration was formerly of greater importance in foreign countries than it is now, but the hereditary facility in certain lines of business which was the result of sons following in the business of their fathers had much to do with the success of foreign bankers and business men. When NAPOLEON desired men who could translate cipher dispatches, he found in the post office of France men whose fathers had been employed at this work under Louis XIV and other earlier kings.

The systems of banking abroad tended to the concentration of the business in the hands of a few great banks, and as the business expanded and new territory was covered it was done by means of branches. Men to manage these branches had to be trained in a manner that could not be accomplished satisfactorily in the home institutions, and in Germany, France, and England there are now schools which give the bank employee opportunity to fit himself by extra effort for positions requiring a wide knowledge of the general scope of the business.

In this country the bank itself has been the school in which our bankers have usually learned. Of course, the original starting of

banks here implied a knowledge greater than common on the part of the originators, and yet the history of banking in the United States shows rather the ignorance than the wisdom of the early bankers. Although there are shining exceptions, as that of ALEXANDER HAMILTON when he planned the first Bank of the United States as the financial support of the Federal Government. Other banks of this period are still in successful operation and show that there was much real banking science in the heads of some of our ancestors. But with the development of free banking, and the possible admission to the business of every citizen, whether competent or not, the disasters of our early banks show that ignorance and self-sufficiency worked very disastrous results. If the competition insured by the free banking principle had not made the institutions numerous and small, the ensuing troubles might have been greater. These numerous small banks were, however, the training schools of men who learned all that then was required thoroughly because each of them as a rule had a whole bank to learn in. While most of these men became expert in their business, yet there was a jealousy of each other generated by competition, which for a long time prevented the mutual support that has become by degrees a feature of our system. It took many disastrous financial panics to impress bankers with the necessity of throwing aside much of the spirit of hostility which was the result of early competition. The American Bankers' Association was formed to bring about a better understanding between the scattered bankers and to teach them that even with free competition there might still be a unity of purpose in attaining objects beneficial to all. To this association and to the spirit of association and interchange of ideas that have grown out of its efforts, can be fairly ascribed the broader lines on which competition in banking is to-day conducted.

The growth of the country and its increasing wealth have extended the scope of the banking business of the United States and built up great banking institutions and specialized many forms of the business. But with this growth and development it becomes more difficult for the young man entering on a banking career in the lowest position and expecting to work up to attain the promotion he desires. The American Bankers' Association, in its educational scheme, was thinking of these things, and has sought to encourage a spirit of study and inquiry among bank employees, while pointing out methods in which this spirit may be profitably exercised. The convention held in Cleveland was the first important gathering of bank employees held on a national scale. The representation was not as widespread as may hereafter be expected, though satisfactory for a first gathering of this kind. There was, it is said, some mani-

festation of a desire to cut loose from the American Bankers Association and run the Institute of Bank Clerks as an independent affair. If any such idea had any support it would have been an extremely unwise course to have encouraged it. The spirit of independence appears to be so much in the air of this country that no body of men seem to be able to get together without declaring themselves independent of something. But employees should reflect that they are still dependent on employers, and should ask themselves the question, How many employers, before the American Bankers' Association took this matter up, would have encouraged their clerks to attend such a convention, or given their reluctant consent that they might attend it? The work of the American Bankers' Association in this respect has been educational to employers and employees alike.

THE CHANGE OF OPINION as to the availability of the bank note as a banking device has been very pronounced during the last ten years. As a means of providing a currency when the Government should cease to issue paper money, there seemed ten years ago hardly a dissenting voice that the promissory note issued by banks was the only substitute. Of course there was great diversity of opinion as to the style of bank note and the character of the security behind it. The discussion has taken a wide range and it has been generally agreed that the National bank note, based on United States bonds deposited, was lacking in the qualities which in other countries rendered the bank note a desirable banking device. Nevertheless, the safety of secured notes has made the people of the country reluctant to accept any bank note less safe. The advocates of asset currency have attempted to prove again and again that bank notes based on the general credit, limited in amount and protected by a safety fund, were just as safe as the bonded notes, but although they have convinced themselves, they have not gained enough converts to assure the success of their plans.

It is believed that the vigorous discussion of the subject which has been going on, instead of strengthening the cause of asset currency, has revealed many defects, and has shown the impracticability of introducing it in the United States. In fact, many who once thought it practicable have been forced to recede from this position.

The general utility of the bank note as a device in modern credit banking is in reality being called in question, not only in the United States but in other countries. One reason of this loss of faith in the credit bank note is the great increase in the gold supply. What is the necessity of using substitute money when an ample supply of

real money is within reach? It is found, moreover, that in the most advanced countries where the credit bank note was supposed to flourish that the credit element in the notes used has been gradually diminishing and that the so-called credit note is gradually approximating to the coin certificate. The coin reserves held against the notes of the great banks of England, France and Germany are being continually increased. Thus, the very foremost examples of use of the bank note are losing their force as incitements to adopt a credit bank currency. The extent to which the property of the country is being made available for exchange by the employment of the bank account has increased beyond all precedent. The bank deposits of the country represent its property placed in a liquid form. These deposits, transferred by checks and drafts, and the clearing-houses, by means of which these checks and drafts are exchanged and settled, afford a method of doing an immense amount of business without the use of money. But when settlement is made of these credit transactions it is felt that the settlement should be final. Therefore, balances are required to be paid in a final way and real money is the only thing to effect final settlement. Every business man has felt that when balances were paid in coin or in National bank notes based on bonds, or in greenbacks or in coin certificates, that the settlement was a finality. But even the slight element of uncertainty existing in the present paper money has by some been recognized as a source of danger, and these think that currency reform cannot be called reform which seeks to substitute a paper currency containing a greater element of uncertainty for one containing a less.

If there is to be reform, let the country go on in the direction now taken by the most advanced European nations, and by degrees approximate our paper currency to gold certificates. The great supplies of gold now realized throughout the world make this practicable for a nation as rich as this country.

THE BUGBEAR OF BANKING IS FAILURE. That the theory of banking is a correct one is shown by the fact that there are banks in existence that have never technically failed although some of them have been in operation for a century or more. When it comes to saying that there is any bank in existence that has lasted for a century and has not asked for time on a single demand obligation, one may well hesitate. To ask for time and to have the lapse from immediate payment condoned constitute suspension. The suspension of payments under exceptional circumstances is no disgrace even to a well-managed institution, as some of the most solid banks in existence to-day have been obliged to resort to this expedient. A bank

often goes out of existence without any failure, either by the termination of its corporate existence or because its stockholders wish to go out of the business. A voluntary liquidation is often a sort of failure in the sense that the enterprise was not successful enough to warrant its continuance. But it is the genuine breakdown that forms the obstacle to granting certain banking privileges by law that might add to the ordinary usefulness of a bank.

Failures are caused either by dishonesty or mismanagement. Of course there are often different degrees of dishonesty connected with mismanagement, but the failures of thoroughly honest bankers are extremely rare. No doubt under a free banking system men who are unacquainted with the technicalities of banking often start banks, and it is the fashion to ascribe failures to ignorance and inexperience; but the men who start banks are, as a rule, men who know enough to accumulate the necessary capital, and must have knowledge of the values of the securities that form the basis of loans in the place where their bank is located. Nor can those men be entirely acquitted of dishonesty who invest the funds of the bank they control in speculative enterprises of their own or others. When two banks in the same place, one of which has failed and the other not, are compared, the fact that one bank holds firm while the other failed shows that the bank failing might have avoided dangerous conditions as well as the other did.

It is easy, therefore, to conclude that in every locality, and for banks of large or small capital, there must be some invariable rules which, if observed, will protect a bank from failure and even from suspension except under very unusual conditions. These rules are well known, and there is no need of repeating them here. The bank directors and officers of banks that fail sin against the light that they possess. The only excuse that can be made for them is the excuse always made for human weakness. They abandoned the strict rules that should govern banking and took risks either for the supposed benefit of the bank or for themselves.

It is plain that no banking rules, no supervision by higher authority, can absolutely prevent bank failure. But good banking laws, Government supervision, and severe penalties enforced with impartiality and vigor, discourage dishonesty and tend to reduce failures to the lowest possible point.

In regard to failures much talk is heard about the reserves which a bank ought to maintain. It is not believed that a reserve alone ever saved a bank from failure, or that the lack of sufficient reserve is a frequent cause of failure. No doubt when banks exercised the right to issue their own promissory notes, without special security, reserves cut a more important figure than they now do. Notes of

this kind were used to pay deposit liabilities and they passed into the hands of parties who did not know the bank well and among whom distrust was more easily aroused. Some have, without due consideration, argued that a deposit liability and a liability for an unsecured note are identical in their nature. In that the bank gives no special security for either, they are similar, but the difference lies in the fact that a deposit account is a debt to a customer who knows the bank well and has confidence in it, whereas the note may get into the hands of strangers who always have more distrust. If the depositors of a bank make a run upon it and are paid in notes, how do the notes allay the distrust that caused the run? If there is an unusual demand by depositors on account of business needs, and the bank pays in its own notes, then it will find that the notes will come in for redemption faster than the deposits will return in other money. No bank ever saved itself by the issue of notes where distrust existed, and if a bank is in such a condition as to be unable to pay depositors' checks when demanded in cash, it would be more honest to fail at once than to attempt to postpone what must surely come by the issue of notes.

But even where notes have been most carefully used they require larger reserves than deposit accounts, because of the greater degree of distrust that attaches to them. The law required reserves on the secured National bank notes for eleven years prior to 1874 equal to the reserves on deposits, but when it was found that the note holders never sought to redeem these secured notes, the law requiring reserve on them was abrogated.

But with the banks of the present time, State or National, issuing no unsecured notes, it is believed that too much stress is laid on reserve as a protection against failure. Deposit accounts are chiefly transferred by checks—settled by exchange, but while this lessens the demand for cash, the reserves would be of no more importance were all checks actually paid in cash. Every day the cash paid into a bank is equal, or greater or less than the cash paid out. If it is equal there is no call on the reserve; if the cash paid in is greater, the reserve increases; if the cash paid in is less, the reserve is diminished. Some margin of reserve is no doubt necessary, but why should it be twenty-five or fifteen or any other per cent. of deposits? If the cash payments in and out show a steady tendency to decrease the cash on hand from day to day, it seems about time to call in loans and liquidate other resources for cash. The wise banker finding cash diminish will do this at once. Why should he wait until a certain fixed percentage of reserve is reached? But if the supply of cash coming in continues to diminish faster than the bank can liquidate its loans or other resources, the bank must suspend or fail. This process of liquidation ought to proceed or stop as the supply of cash daily falls

off or increases. Why should any fixed margin of reserve be of any great importance? Reserves kept at fixed percentages have no doubt some effect on the minds of the bank's customers, and perhaps sometimes avert distrust, but their lack is seldom, if ever, the cause of failure. The real cause of failure has generally got in its work before the reserve disappeared.

THE IMPROVED BANKING DEVICES now generally in use, especially in the accounting department, represent a commendable spirit of progress both upon the part of their originators and the banks that employ them. With the remarkable growth of banking in recent years and the increase in competition, it would be exceedingly difficult to transact business in all respects as was done a quarter of a century ago, or perhaps ten years ago. Judicious improvements in the methods of accounting and in the books and systems used were imperative.

It is to be regretted, however, that in the haste to provide the means for economizing time and labor some new loopholes for dishonesty have been furnished at the same time. Bank examiners, in reporting on the defalcations which have wrecked a number of banks in the past few years, have frequently criticized the introduction of some of these labor-saving systems as tending to facilitate, and even to invite, dishonesty on the part of bank employees.

While these criticisms are no doubt justifiable, considering the extraordinary degree of care that should pervade the management of a bank, it would be unfortunate if they should lead to a return to antiquated and discarded methods.

These modern systems, as their weaknesses are developed by experience, will no doubt be improved and perfected so that they will not only save time and labor, but will be as safe, or perhaps safer, than the old-time methods. It is believed that the same skill that devised these improved systems will be capable of adding to them such safeguards as may be necessary to fully protect the funds of the banks from the dishonest men who sometimes get into the employ of these institutions. In a certain sense (though not in legal contemplation), bank deposits are trust funds, and they cannot be too carefully shielded from attacks, both within and without the bank.

While the great majority of bank employees are thoroughly trustworthy, the mischief that one dishonest employee among thousands may do is almost incalculable, for the ill effects of an embezzlement always extend beyond the bank immediately concerned. Public confidence is one of the most valuable assets a bank can have, and whatever tends to impair it should be tabooed.

GOVERNMENT AID TO THE MONEY MARKET.

The assurance of Secretary Shaw that forty millions in public moneys are or will be available for deposit with the banks, and may thus if required be turned into the channels of circulation, should the fall trade demand, ought to allay all fear of the willingness of the present Administration to protect the money market. This announcement of the Secretary indicates how far public opinion has veered in favor of the banks. The cry of benefits showered on these corporations by the Government is now less frequently heard, because people are beginning to understand that the transaction is not so altogether one-sided as might easily be supposed at first sight, the banks in fact rendering valuable services in return for a valuable privilege.

This amelioration of public opinion makes it easier for the Secretary of the Treasury to exercise his discretion and thus avert some of the dangers attendant upon the imperfect monetary laws by which he is controlled. The men who have been at the head of the Treasury Department have during the last fifty years seldom exercised the discretion entrusted to them unwisely, and none of them has appeared to be governed by motives of personal interest, nevertheless the power to influence the amount of the surplus funds which should be restored to a thirsty market is a very great one to be entrusted to one man. The fear of political effect has been, until within recent years, an almost perfect check on any Secretary who might be inclined to tamper with the money markets, by judicious use of the deposit of public funds with the banks. But this check is losing its original force.

There is room for Congressional action, regulating the handling of temporarily accumulating public funds so that they will as a matter of course remain in the channels of circulation continually, and not be as they are now forced out by law only to be put back at the discretion of the Secretary. No such difficulty with the public funds is encountered in Great Britain, France or Germany, and the example of these countries indicates that there are ways in which the public may be protected from the influence of public financial operations. The Treasury here is appealed to by the business public to allay the troubles it creates, and it responds in a variety of ways, all of them causing business men to feel that the Treasury is paramount. This encourages speculators to watch the periodical damming up of the channels of circulation and to raise an outcry calculated to have the congestion relieved just at the right time to suit their petty operations, regardless of the injury which may be generally inflicted. The discretion of the Secretary is thus often liable to influences of which the official himself may be unconscious.

There are so many obstacles in the way of any change in our financial laws that it is almost useless to talk of any change, but there is a widespread feeling among business men that certain classes benefit more than others under the present methods of handling the public moneys imposed by law and custom. The volume of the currency available in the ordinary channels of circulation now depends very much on the action of the Secretary of the

Treasury, and he himself is confined in his action by the curious interdependence of our monetary laws. Thus if he desires to enlarge the amount of public money on deposit with the banks, he finds that he is inducing the banks to retire their circulating notes. The object of placing more public moneys with banks is to increase the volume of money in circulation. But if the banks, in competing for United States bonds to deposit as security for public moneys, cause bond premiums to rise so that other banks are induced to retire their circulating notes and take out their bonds, in order to obtain the high premiums, it does at first sight appear discouraging. But it is unreasonable to blame the banks. The motive controlling these institutions is profit. If any course of action promises profit, the bank will take that course. The premium on the bonds is a legitimate temptation to sell. The retirement of bank notes naturally follows the rise in premiums. But banks in all parts of the United States are not affected alike. It is well known that in localities where the current rate obtained for loans is higher the profit on circulating notes based on bonds is less than in the localities where the current rate for loans is less. It follows that all banks are not induced to withdraw bonds at the same time. When the premium on bonds offers an inducement to the outside or country bank to retire its circulation, the issuing of notes may still be profitable to the banks in the money centers. While some banks therefore sell their bonds and retire their circulation, others acquire these bonds and issue notes, or perhaps they use the bonds to obtain public moneys. In other words, the withdrawal of bonds to obtain premiums does not necessarily make a scarcity of currency. In fact, these changes of bonds from one bank to another may cause a redistribution of the available currency which causes it to circulate where most needed. The effect of the premium on bonds in causing a stringency in the money market has perhaps been exaggerated. Such an exaggeration is most natural if in considering the subject the bank-note circulation alone is dealt with. In estimating the effect of a movement on the part of some banks to sell bonds, the currency of the country must be taken in its entirety. Government notes are an almost constant quantity. Gold and silver coin, especially gold coin, increases or diminishes with the demand for it. If the retirement of bank notes is compensated for by an increase in coin, the general aggregate of available money is not diminished.

The effect of a retirement of bank notes must be viewed from several standpoints. The amount retired by some banks may be equalized by the new issues of other banks. It may be made up by importations of gold coin. In either way the aggregate amount of money may be maintained at the same figure or even increased. But apart from the aggregate amount outstanding, the effect of a new distribution should be looked at. A bank in one locality may deposit coin or legal-tender paper and retire \$100,000 of its notes. Strictly speaking, the notes said to be retired are still in circulation. The coin or legal-tender notes placed in the Treasury are not necessarily held there; they may be immediately paid out for expenses or deposited with other banks as public moneys. The bonds withdrawn may be sold to some bank that uses them perhaps as a basis for public money deposits or perhaps to issue new circulation. It can readily be understood therefore that a very considerable retirement of notes and withdrawal of bonds by the banks in one locality may result in an increase in actually available money rather than in a diminution. The bank retiring its notes, amounting

to, say, \$100,000, and selling its bonds of the same amount, may secure \$108,000 to loan in its own locality.

Owing to the great diversity of rates of interest in different parts of the United States, it is a matter of no little importance that the banks where circulating notes are not profitable should have every facility to sell their bonds, so that the banks where circulating notes are profitable may buy them, and also where circumstances render the use of the bonds as security for public moneys desirable that in such localities they should be obtainable.

This very desirable free interchange of bonds is hampered and checked by the law of 1882, which fixes the limit of \$3,000,000 per month on retirement of National bank notes. This law was passed to prevent an imaginary conspiracy on the part of all the National banks in the country to retire their circulation at one stroke so as to oppress the business public. But under normal circumstances the interests of the National banks are not the same, nor have they ever shown any disposition to act in concert. If this three million limit were removed, and the banks given absolute freedom in retiring circulation and withdrawing bonds, a redistribution of money from localities where it was not needed to those where it was in demand would be encouraged, and there would be much less reason to complain of the lack of elasticity of the money of the country. Elasticity consists not only in suitable variations of the aggregate amount, but also in suitable facilities for distribution from one locality to another as it happens to be needed.

It is astonishing that these things are not better understood. The assertion that Secretary Shaw would endeavor to prevent banks from retiring their notes and regaining possession of their bonds, if true, shows that the Treasury authorities are in something like mediæval darkness on some phases of finance. To prevent the banks from trading in their bonds by threat of disfavor is of an analogous nature with the attempts of Legislatures to fix the price of provisions. There is not the least doubt that such a threat will delay the banks which some time ago deposited municipal bonds as security for public deposits from carrying out the recent order to substitute United States bonds for these securities.

All causes which restrict the banks in the retirement of notes and sale of their bonds, such as the \$3,000,000 per month limit, the alleged threat of disfavor, etc., tend to diminish the supply of bonds in the market from what it would otherwise be and thus force the market premium above normal.

It is believed that much of the lack of elasticity in the present currency is due to the manner in which the banks are handicapped in selling their bonds. If all restrictions were removed and banks were encouraged to sell, it is believed that many millions of bonds would change ownership, and come into the hands of those who could employ them to much greater advantage than the present holders as a basis of security for either circulating notes or for the deposit of public moneys. But even if bond premiums should reach a point at which all National banks found it profitable to retire their circulating notes, the consequence would be the increase of gold certificates based on the gold coin which normally would flow into the country to take the place of the bank notes. If the bonds were no longer needed as security for circulating notes, they would be available as security for deposits of public money, and thus aid in distributing currency among the localities where it was most required.

CLEARING-HOUSE CURRENCY.

Clearing-house circulation is not a very new idea. It has cropped up in various forms for a number of years. A bill embodying the idea has been before Congress, introduced by Mr. Pugsley, of New York.

The dangers of permitting the individual independent banks of the United States to issue notes based on their general credit being recognized, some way of affiliating these banks in a manner to combine their strength was the next step. Branch banks were proposed, but it was at once seen that this would lead to consolidation and deprive the country of the many acknowledged advantages of the independent system. The clearing house seemed to afford a way out of the difficulty, and in the Pugsley bill a way is pointed out in which clearing-houses, properly organized by Federal law, can consolidate the strength of the separate banks for the purpose of issuing a safe note circulation and yet in no way interfere with the business of each separate bank in any other line. The plan appears to possess some advantages, but it may not prove so easy of successful execution as its advocates seem to imagine.

The clearing-house as it exists to-day is an institution which has risen out of the necessities of banks doing business in close neighborhood. The New York Clearing-House is typical of them all. It was formed to facilitate the exchange of checks and drafts which each bank receives in the ordinary course of business. The machinery is extremely simple, and the so-called association is not incorporated. In effecting the exchanges balances due from each bank to the others are paid in coin or its equivalent. In times of financial crisis the associated banks experienced such a scarcity of the money in which balances were usually paid that they were compelled to resort to the device of pooling their credit, and on the strength of this issuing, through a committee representing the whole, certain certificates bearing interest. These certificates could be obtained by any bank short of cash to pay its balances, in such amounts as were needed, by depositing its bills receivable in amount and quality satisfactory to the committee. As cash was received upon the securities or paid otherwise, the certificates were redeemed and cancelled. The outside public seemed to have an idea that these certificates were of the same uniform quality and value as bank notes are supposed to be. That the value of these certificates depended on the securities placed in exchange for them is too evident from the fact that some were promptly turned in and cancelled, while others were not paid for months after their issue.

In the clearing-house associations of to-day each bank stands upon its own conditions and credit as far as possible ; the banks as associates take no more responsibility for each other than they can possibly avoid. The taking out of the certificates in times of panic is regarded as a necessary evil. For a bank to be compelled to take them out is looked upon as a confession of weakness. It is true that for their own protection the associated banks are often compelled to carry along a weak sister, but if it were not for the danger that

might in such times come to all, they would no doubt prefer to let the weak bank go to the wall.

Clearing-house certificates are by no means a pleasant remedy. The stronger banks feel that they are to a certain extent imposed upon by having to take risks for the weaker ones. It must be remembered also that the present clearing-houses are composed usually of what may be considered the strongest banks.

The present clearing-house certificates cannot be circulated as money; they are in large denominations and bear interest, and are as a rule only passed from one of the associated banks to another. It is no doubt true that these certificates might be made in the denominations of ordinary bank bills and of the same size and form. The clearing-houses as they now exist could so issue them if it were not for the ten per cent. tax on all notes or documents fitted and intended to circulate as money, except National bank bills. If Congress should see fit to repeal this tax as far as existing clearing-houses are concerned, the clearing-houses so permitted would perhaps try the experiment. If such certificate notes were issued by existing clearing-houses, they would be undoubtedly used with discretion and called in and redeemed when the necessity for their use had passed. If, however, the privilege were given to any clearing-houses that may be hereafter organized, it is to be feared that so-called clearing-houses would be organized for the sole purpose of issuing these notes.

The simplest way of developing an emergency note out of the clearing-house idea is to start with the existing clearing-houses and with them alone. These clearing-houses are in the natural money centres. Each of them has its well-defined membership, and this membership has its special clientage of corresponding banks, not circumscribed by geographical lines, but connected strictly by natural business affiliations. The country is very completely covered by clearing-houses now, and the experiment, if made, should be made with them exclusively. As other clearing-houses were organized in good faith in real money centres, provision might be made for the new clearing-houses. If the experiment proved a failure, if the bills issued were not redeemed as soon as the occasion for them passed, the whole plan could be revoked by re-imposing the ten per cent. tax.

THE NOTED FORGERY CASE in San Francisco a few years ago has been passed upon recently by the Supreme Court of California, in an action brought by the Crocker-Woolworth National Bank vs. the Nevada Bank of San Francisco. The decision is fully reported elsewhere in this issue. The conclusion reached by the court is interesting as bearing upon the question of payment of raised checks through the clearing house. Should other courts follow this decision, some amendment of the rules of most clearing-house associations would appear to be necessary to adequately protect the paying banks.

PRAISE FOR THE MAGAZINE.—Messrs. Ed. McCarthy & Co., bankers, Galveston, Texas, write under date of September 19:

"Your current number of the BANKERS' MAGAZINE is certainly a splendid one both as to its contents and its artistic style. You may certainly be proud of it."

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the *MAGAZINE'S* Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

RECOVERY OF MONEY PAID ON FORGED CHECKS—CLEARING-HOUSE RULES.

Supreme Court of California, July 14, 1903.

CROCKER-WOOLWORTH NATIONAL BANK vs. NEVADA BANK OF SAN FRANCISCO.

When a "raised" check is deposited with a bank for collection and indorsed by it with a restrictive indorsement, in such manner that the indorsement conveys no representation that the collecting bank is the owner, and no such representation is otherwise made, and the proceeds, after payment by the drawee bank, are paid out by the collecting bank to the payee, the collecting bank is not liable to the drawee bank.

It is competent for banks belonging to a clearing-house association to adopt rules governing the effect of indorsements among themselves, even though such rules vary from those prescribed by the statutes of the State.

Under a clearing-house rule that negotiable paper deposited for clearance shall bear the stamp of the depositing bank, which shall be "for clearing-house purposes only," and shall guarantee the validity and regularity of prior indorsements, such an indorsement conveys no representation to the drawee that the depositing bank claims to be the owner of the paper, and, where the check has been "raised," the collecting bank may show that it acted merely as a collecting agent for another, to whom it paid the proceeds.

This was an action by plaintiff to recover money paid by mistake upon a raised check. The facts were that on December 9, 1895, the Bank of Woodland, in Yolo county, Cal., drew its check upon the Crocker-Woolworth National Bank of San Francisco for \$12, to the order of one A. H. Dean. At that time, and for some little time prior thereto, Dean was a depositor in the Nevada Bank of San Francisco, and had therein a commercial account, with \$1,000 or \$2,000 to his credit. Dean fraudulently altered the check by changing its date from December 9 to December 13, and raising its amount from \$12 to \$22,000. On December 17, 1895, he placed his name, by way of general indorsement, upon the back of the check, and deposited it with the Nevada Bank, making out and delivering with the check the usual deposit tag. The bank thereupon entered upon the pass-book of Dean a "provisional credit" for the amount of the fraudulent check. On December 17, 1895, the Nevada Bank placed its clearing-house stamp upon the back of the check and sent it to be cleared in the usual way. The Crocker-Woolworth National Bank, which was the correspondent of the Bank of Woodland, had funds of the Woodland Bank on deposit, and the check was honored, under the clearing-house rules, the Nevada Bank receiving the credit due to it. On the day after the payment was made—that is, on December 18—Dean checked out of the Nevada

Bank the sum of \$20,000, leaving about \$2,000 of the amount of the raised check still to his account, and fled the country. He was a forger, a common criminal, and insolvent. The Crocker-Woolworth Bank did not inform its correspondent, the Bank of Woodland, of the payment of the check until the 3d of the following January. On January 4 it ascertained from the Bank of Woodland that no such check had been drawn, and consequently knew that a fraud had been perpetrated. It notified the Nevada Bank, and demanded payment of the \$22,000, and offered to return the raised check. Judgment in the court below was in favor of the Crocker-Woolworth National Bank, and the Nevada Bank appealed.

HENSHAW, J. (omitting part of the opinion): The facts in the case at bar, summarized, amount to this: By the affirmative error of the plaintiff, money was paid to the defendant, who was the agent of Dean. The defendant, after receiving payment, did as in law it was bound to do (*Svensden vs. State Bank*, 65 N. W. 1086), pay the money to its principal upon his demand, and thus changed its position so that, if recovery is had, the loss must inevitably be borne by it. The application of the principles above enunciated to these facts would absolutely bar a recovery, unless there be some peculiar feature of the transaction—some especial act of the defendant—which takes the case out of their operation, and which, by reason of defendant's own conduct, casts liability upon it.

The acts, facts and circumstances which by respondent are held thus to render the defendant liable are epitomized in the following finding of the court. After having made findings clearly establishing that, as between the defendant and its depositor Dean, the bank had taken the check for purposes of collection only, the Court adds: "At and before the time of making such payment the plaintiff had no notice or knowledge whatever that the defendant was not, as it purported and represented itself to be, the absolute owner and holder of said check, and no notice or knowledge that the said check was presented by the defendant as agent for collection only, or otherwise than as owner and principal."

The value and importance of this finding to support the judgment arises from the principle above stated, that if one be, or hold himself out as, the owner of such paper, then a recovery may be had against him, if it be seasonably sought, because he will be the holder of money paid, which in good conscience and equity he should not be allowed to retain; whereas, in the case of an agent, recourse is limited to the principal. Of course, the all-governing rule being that the defendant holds money which in good conscience he is not entitled to hold, it can matter not whether (if in fact he was an agent) this agency be known or unknown to the drawee, provided only that the drawee did not part with the money upon the faith of the apparent principalship. In one case it might be that the money was paid because of the belief of the drawee that the holder and presenter of the paper was the actual and responsible owner of it. In another case it might be paid with total indifference to this fact. In the one instance, therefore, the plaintiff would have a right to rely for a recovery upon the ownership, real or apparent, of the person presenting the bill or check; while in the other, since the payment was in no wise made upon faith or reliance in the apparent state of facts, the defense that the payee was, in truth, but an agent and had parted with the money to his principal, would and should be permitted to avail.

In this case the finding of the court, as above quoted, is that the defendant "purported and represented itself to be the absolute owner of said check. * * *" and that plaintiff "had no notice nor knowledge that the check was presented by the defendant otherwise than as owner and as principal."

The only support which this finding receives comes from the uncontradicted facts touching the method of the presentation and payment of the check. It already has been stated that the check was presented in regular manner through the clearing-house, of which institution both plaintiff and defendant were members. The constitution and rules of the clearing-house, which were strictly followed by defendant, here become important for consideration. Section 2, art. 15, and sections 1, 2 and 3, article 17, of the constitution are as follows :

" Art. 15. Sec. 2. Errors in the exchanges and claims arising from the return of checks, or from any other cause, are not to be adjusted through the clearing-house, but directly between the members who are the parties to them ; all checks, drafts, notes, or other items in the exchanges, found not good, or misseent, shall be returned without intentional mutilation or notice of dishonor given directly to the member from whom they were received, as soon as examined, or presented not later than two hours on ordinary days, or three hours on collection day, from the hour set for the clearance in which said returned vouchers were exchanged, and the said member shall immediately refund to the bank returning the same the amount for which it had received credit through the clearing-house for the said checks, drafts, notes or other items so returned to it ; in case of the refusal or inability of any member to promptly refund to the bank presenting such checks, drafts or other items so returned, the bank holding them may report to the manager of the clearing-house the amount of the same, and it shall be the manager's duty, with the approval of the clearing-house committee, to take from the settling sheet of both members the amount of such checks, drafts, or other items so reported, and to readjust the clearing-house statement, and declare the correct balances in conformity with the changes so made, provided that such report of default shall be given to the manager before the hour set for payment by him of the credit balances resulting from that day's exchanges.

Art. 17. Section 1. All negotiable paper originally made payable to the order of any bank in this association and deposited for clearance shall be officially indorsed in writing by such original payee.

Sec. 2. All negotiable paper deposited for clearance by the members of this association shall bear the stamp of the depositing bank, which shall clearly indicate the name of the bank, its clearing-house number and the date of clearance. The stamp shall be for clearing house purposes only, and shall guarantee the validity and regularity of all prior indorsements on the paper so cleared, except the indorsement of an original payee of a certificate of deposit, and it shall not be construed to supply a missing indorsement.

Sec. 3. Each bank shall file with every other member of this association a certified impression of its clearing-house stamp and certification stamp, and the signature of persons authorized to certify and indorse checks."

The check in question bore the defendant's clearing-house stamp in these words : " Pay only through clearing-house. Dec. 17, 1895. 16. The Nevada Bank of San Francisco." With this stamp upon its back, it was passed with other checks into the clearing-house, and was paid by plaintiff. Admittedly the only representation of ownership of any kind whatsoever to support this finding is found in this stamped indorsement, coupled with the presentation through the clearing-house. The plaintiff does not even plead that the defendant was the "owner" of the check, but pleads merely that he was the "holder." The distinction is, or may be, important. One may be the holder of a check, and not the owner, and, under the rule which con-

strues a pleading most strongly against the pleader, it might well be held upon the very averment of the complaint that plaintiff knew that defendant was not the owner. "The term holder is properly applied to the person having possession of the paper and making the demand, whether in his own right or as an agent for another." (*Bowling vs. Harrison*, 6 How. 258, 12 L. Ed. 425.) "Holder is a word of the same import as bearer." (*Putnam vs. Crymes*, 36 Am. Dec. 250.) "Holder is a general word applied to any one in actual or constructive possession of the bill, and entitled at law to recover or receive its contents from the parties to it." (*Byles, Bills*, p. *2.) Moreover, it may be noted that there is no averment in the complaint that the plaintiff paid upon the belief that defendant was such owner, but the explicit statement is that it paid in the belief that the check was genuine, and not fraudulently altered, "and without such belief plaintiff would not have paid such sum or any part thereof."

But, passing this as being at least persuasive against the finding of the court that the defendant represented itself to be the owner, and that plaintiff paid only upon that representation, we come to consider the effect of the stamped indorsement which the Nevada Bank placed upon the check. Indorsements are either general or restrictive, and the effect of a general indorsement is well established in mercantile law. The indorser warrants to every subsequent holder thereof not liable to him that the paper is in all respects what it purports to be, that he has good title to it, that the signatures of all prior parties are binding upon them, and that, if the instrument be dishonored, he will, unless himself exonerated, pay upon due notice given. (Civ. Code, § 3116.) "A special indorsement is one which specifies the indorsee, and may by express words to that purpose, but not otherwise, be so made as to render the instrument not negotiable." (Sections 3113, 3115.)

But, while this is the ordinary effect of a general indorsement in the commercial world, it is perfectly competent for banks associated together to bind themselves by rules governing, as between themselves, the effect of their indorsements, and these rules as to them will supplant the law. It will be noted in the sections of the constitution of the clearing-house above quoted that all negotiable paper originally made payable to the order of any bank belonging to the association and deposited for clearance shall be officially indorsed in writing by such original payee, while all other negotiable paper deposited for clearance by members of the association shall bear merely "the stamp of the depositing bank, which shall clearly indicate the name of the bank, its clearing-house number, and the date of clearance. The stamp shall be for clearing-house purposes only, and shall guarantee the validity and regularity of all prior indorsements on the paper so cleared, except the indorsement of an original payee of a certificate of deposit, and it shall not be construed to supply a missing indorsement." Here, then, is an express limitation of the effect of such indorsement as this check bore. It eliminates, amongst other things, from the warranty of indorsement, the Code provision that the instrument "is in all respects what it purports to be."

In short, it would seem as though the framers of the constitution of the clearing house, with deliberation, followed the decision of this court in *Redington vs. Woods*, 45 Cal. 428, 13 Am. Rep. 190, where it is said: "But the indorsement of the holder receiving payment can have, at most, no greater

legal significance than this. It implies, at best, only an undertaking that he has a valid title to the bill or check, and consequently a right to receive payment—an implication which the law raises without the indorsement. But the indorsement, *proprio vigore*, imposes upon him no other or greater liability to refund money paid upon an altered check than would attach to him without the indorsement. In other words, the indorsement, does not, of itself, import an undertaking that the check has not been altered; and in proceedings to recover back the amount paid on an altered check the indorsement could not be made the foundation of the action, as importing a promise to refund the money, in case it should afterwards appear that the amount in the body of the check had been fraudulently altered."

The members of the clearing-house, by their constitution, have brought themselves strictly within this language from the Redington case. Moreover, it is at once apparent that under the constitution of the clearing-house such an indorsement is not only limited and special, so as to destroy the negotiability of the instrument, but that the rules were designedly drawn to effect this purpose. It is provided that "the stamp shall be for clearing-house purposes only." The indorsement itself is to the effect that the check shall be paid only through the clearing-house, which means, of course, to the clearing-house. This method of payment is established by the rules. It amounts merely to a system of set-offs and cancellations, whereby accounts are settled between members without the actual transfer of unnecessary funds. From any aspect of this indorsement, therefore, it was not sufficient to charge the defendant with being anything other than the plaintiff pleads it was—"the holder of the check"; and certainly the indorsement contained and conveyed no "representation" whatsoever to the plaintiff that the defendant claimed or asserted itself to be the owner of the check. Common knowledge and common experience inform us that in the case of local checks such as this it is the uniform, if not the well-nigh universal, practice for banks to take them from their depositors and clients for collection only. They do not "buy" them. They take them as agents. And, if this common knowledge needed re-enforcement, it is abundantly furnished by the evidence of the officers of the banks testifying in this case to the effect that at least, if it was not the uniform practice never to buy local checks, it was certainly the general practice to take them only for purposes of collection. Therefore, so far as this check so deposited and so presented to plaintiff is concerned, the knowledge that it conveyed was at least the knowledge that in this transaction, as in thousands of others, the Nevada Bank was probably the collecting agent merely. It will not be assumed, against the uniform practice of banks in this regard, and in the absence of any evidence at all upon the subject, that the plaintiff here, and in this sole and peculiar instance, put reliance upon the supposed ownership of the check by defendant. If, indeed, it did have such belief, then the complete answer is that the restricted indorsement did not justify nor warrant it in that belief, nor make the defendant liable because such belief was entertained.

But there is not only no evidence to support the finding that the Nevada Bank represented itself to be the owner, but there is positive evidence in addition to that already pointed out to show that plaintiff bank before payment of its check knew, or at least believed, that the Nevada Bank was acting as collecting agent for Dean. This evidence is found in the testimony of Mr.

Kline, plaintiff's Cashier. Mr. Kline, after stating that he looked over the checks coming through the Nevada Bank, and saw and read the particular check in question, within the time allowed by the clearing-house rules for its rejection and return, testifies: "Q. What is it you did not notice at the time? A. To whom it was payable. I merely knew it was a check of some client of the Nevada Bank, and presented for cash in that manner. Q. How did you know it was a client of the Nevada Bank? A. Because of its coming in the envelope of the Nevada Bank."

It is insisted, however, by respondent that the judgment in its favor is to be supported upon other grounds than that of appellant's liability as an indorser, and that the finding in question derives support from the fact that the appellant presented the check for payment. It is to be remembered that the only representations which the Nevada Bank made were those which follow in law from the mere fact of the delivery of the check to the clearing-house for clearance; but it is said that the presentation of the check was a representation of the genuineness of the signatures, of the title of the presenter, and that the check was in all respects what it purported to be; in short, that the presentation, with or without indorsement, was a representation of everything which the law declares to be warranted by a general indorsement.

In support of this proposition are cited some cases. Thus, in *Merchants' Bank vs. McEntyre*, 2 Sandf. 431, where the forgery was of the signature of a prior indorser, it is said: "We hold it to be a principle of universal application that, where one presents a draft or check to a bank for payment, it is a representation of the genuineness of the signatures appearing upon it; and except where the drawer's signature is forged, or there is some other peculiar reason for taking the case out of the rule, the party so presenting the draft will be held responsible to the drawee for the authenticity of such signature."

In *White vs. Continental*, 64 N. Y. 316, 21 Am. Rep. 612, it is said: "The presentation of the bill, and the demand and receipt of the money thereon, was equivalent to an indorsement."

In *Leather Manufacturers' National Bank vs. Merchants' Bank*, 128 U. S. 26, it is said: "One who by presenting forged paper to a bank procures the payment of the amount thereof to him, even if he makes no express warranty, in law represents that the paper is genuine, and, if the payment is made in ignorance of the forgery, is liable to an action by the bank to recover back the money which in equity and good conscience has never ceased to be its property." The principle upon which these cases are decided is either, first, that the presentation is the equivalent of a general indorsement under which all of these things are warranted; or, second, that the presentation upon the one hand, and the reception and payment of money upon the other, amount to a sale and purchase, and, the consideration for the sale having failed, a recovery back may be had. The cases above cited bear upon the first theory. Upon the second it is sufficient to quote from the United States Circuit Court, where Judge Wallace says: "Upon principle, where the holder of a note presents it at the bank at which it is made payable, receives the money, and surrenders the paper, the transaction is, in effect, a purchase from the holder." (*Riverside Bank vs. First National Bank*, 74 Fed. 276, 20 C. C. A. 181.)

But in the present case the application of neither of these theories will aid in the support of the finding in question. As to the first, it is clear that

mere presentation will not operate to enlarge a special and restricted indorsement into the general indorsement contemplated by section 3116 of the Civil Code. It would be preposterous to say that one who had carefully restricted his liability by special indorsement should by the mere presentation of the check have his situation changed to that of a general indorser. The principle, therefore, is not applicable to the case of a special indorsement, and in the case of a general indorsement it is quite unnecessary in this State to invoke it, since the matter is fully covered by the section of our Code above referred to.

Upon the second theory, that the presentation and payment amount to a sale with warranty by the seller, whatever may be the rule as to such warranties in other States, in this State, where the warranties are those, and those only, fixed by our Code, the principle is at variance with these provisions, and therefore cannot apply. Section 1764 of the Civil Code provides that, "except as prescribed in this article, a mere contract of sale or agreement to sell does not imply a warranty." Section 1774 declares: "One who sells or agrees to sell an instrument purporting to bind any one to the performance of an act thereby warrants that he has no knowledge of any facts which tend to prove it worthless, such as the insolvency of any of the parties thereto, where that is material, the extinction of its obligations, or its invalidity for any cause." These Code provisions were under consideration in *Sutro vs. Rhodes*, 92 Cal. 117, where it is held that, if an invalid negotiable instrument, such as overissued bonds, be presented for sale, both parties being equally innocent, the purchaser cannot recover back his money. The distinction, then, is that in the other States the sale carries a warranty of genuineness; in this State the sale carries merely a warranty that the seller has no knowledge of defects.

It is concluded upon this branch of the case, therefore, that the finding is without support from the evidence. It may be added that the plaintiff nowhere pleads reliance upon any representations made by defendant, but pleads merely its own belief in the genuineness of the instrument. The finding, therefore, is without the issues joined. As was said in *Goings vs. White*, 33 Ind. 126: "There is no averment that the plaintiff relied upon the representations of the defendant. The want of such averment cannot be supplied by a recital of evidence which might justify a presumption that the representations were relied upon, unless such evidence be conclusive of the fact."

For the foregoing reasons, the judgment and order are reversed, and the cause is remanded.

PROMISSORY NOTE—EXTENSION OF TIME—DISCHARGE OF SURETY.

Supreme Court of California, June 20, 1903.

DANERI vs. GAZZOLA, *et al.*

Where, without the consent of a surety, the time for the payment of a promissory note is extended for a definite time by a binding agreement between the holder and the principal debtor, the surety is discharged from liability thereon.

Where the payee of a note agrees to accept one of the makers as a surety, he can be held liable only as such, although upon the instrument he appears as principal.

This was an action upon a promissory note for \$3,000. Two of the defendants, Giacomo Gazzola and Giacomo Canova, set up as a defense that

the payee loaned the \$3,000 to, and the same was wholly received by, defendant John B. Gazzola; that they signed the note merely as sureties for John B. Gazzola—and that the payee accepted the note on the understanding that these defendants were sureties, and defendant John B. Gazzola the principal; that in August, 1899, after this action was commenced by John Daneri, the defendant John B. Gazzola offered to pay to him the full amount due upon the note, and that Daneri then declared that he did not need the money, and in consideration of the sum of \$280 interest then paid by John B. Gazzola and in consideration that the interest should be kept paid as it matured, John Daneri then agreed to dismiss the action and extend the time of payment for one year; that the \$280 was then and there paid, and the one year's extension of time on the principal given; that the extension of time was made without the knowledge, consent, or connivance of the defendants Giacomo Gazzola and Giacomo Canova.

The court sustained plaintiff's demurrer to this part of the answer, upon the ground that such part did not state facts sufficient to constitute any defense to the cause of action set forth in the complaint. Defendants declined to amend.

COOPER, C. (omitting part of the opinion): Of course, the facts must be conceded to be true as alleged for the purposes of the demurrer. The agreement extending the time for one year exonerated the sureties, and the court erred in sustaining the demurrer. The allegations of the answer showed defendants to be sureties on the note. (Civ. Code, § 2832.) They signed it at the request and for the benefit of John B. Gazzola. John Daneri knew that they were sureties, and accepted the note with that understanding.

It is provided in Civ. Code, §§ 2839, 2840, that a surety is exonerated by a performance, or an offer to perform, the principal obligation, and that he may be exonerated in like manner as a guarantor. By section 2819 of the same Code, it is provided that the guarantor is exonerated if the creditor, without the guarantor's consent, and of his own volition, does any act by which the original obligation is altered in any respect, or the remedies or rights of the creditor against the principal in respect thereto is in any way impaired or suspended.

The surety is bound only by the terms of his contract, and if these are varied without his consent it is no longer his contract, and he is not bound by it. The authorities are to the effect that if the time of payment is, without the consent of the surety, extended for a definite period by a binding agreement between the creditor and the principal, the surety is discharged. (Brandt on Suretyship and Guaranty, § 296, and cases cited.)

The rule was adopted by this court in *Gross vs. Parrott*, 16 Cal. 143, in which case it was said: "The effect of the subsequent transactions between the plaintiff and Page, Bacon & Co. was to extend the time of payment, and, of course, to release the defendant, who was a mere surety." (See, further, *Steele vs. Boyd*, 29 A. M. Dec. 219, and notes; *the Bank of Albion vs. Burns et al.* 46 N. Y. 171; *Huffman vs. Hurlbert*, 13 Wend. 375.) In the case at bar the agreement to extend the time was executed. And the tender or offer to pay the note by the principal released the sureties. (Civ. Code, § 2839; *Curia vs. Packard*, 29 Cal. 194; *Hayes vs. Josephi*, 26 Cal. 535; *Brandt on Suretyship and Guaranty*, § 295.)

It was said in *Curia vs. Packard*: "The full amount due for principal,

interest, and costs of suit was subsequently tendered in lawful money by Abadie Bros. to the plaintiff, and he had an opportunity to receive his money from the principals in the bond. His refusal to accept it was a breach of good faith toward the sureties, and their interests were imperiled by the wrongful acts of plaintiff. * * * The contract of suretyship becomes extinct or discharged by a lawful tender made by the principal or his authorized agent to the creditor or his authorized agent."

If it be true that John B. Gazzola offered to pay John Daneri the full amount due on the note, and that said Daneri stated that he did not want the money and declined to take it, but granted the said Gazzola an extension of one year without the consent of the sureties, they became released from the contract of suretyship. It is contended by respondent that the defendants, other than John B. Gazzola, were in fact principals and not sureties on the note. That would be true upon the face of the note, and in the absence of any agreement or understanding to the contrary. But in the part of the answer to which the demurrer was sustained it is not only alleged that John Daneri knew these defendants to be sureties, but that he "accepted the note on that understanding and none other." The authorities cited by respondent do not show that under such circumstances sureties would be regarded as principals. In fact they sustain the views herein expressed. In *Harlan vs. Ely*, 55 Cal. 342, it is said, in speaking of the payees of a joint and several note as to a maker who claimed to be a surety only, "If they had agreed to take him as surety, they could only have held him as such, although he appeared as principal upon the written instrument."

*REFUSAL TO PAY CHECK THROUGH MISTAKE—WHEN DAMAGES
RECOVERABLE.*

Supreme Court of New York, Appellate Division, First Department, July, 1903.

THE T. B. CLARK COMPANY vs. THE MOUNT MORRIS BANK.

Where a depositor sues in tort for the wrongful refusal of the bank to pay his checks, and it appears that such refusal was through mistake, he must allege and prove special damages, or he can recover only nominal damages.

The action was brought to recover damages claimed to have been sustained by the plaintiff because of the defendant's failure to pay on presentation a check for \$57.38 and a note for \$116.42, although upon both occasions the plaintiff had to its credit sufficient funds for that purpose. In the case of the note, the complaint alleged that it was presented and dishonored upon two occasions, but no proof of any second presentation or dishonor was made upon the trial. The complaint then alleged that these acts "were occasioned by the gross negligence and mismanagement of the defendant and its willful wrongful acts as above set forth, and through no fault or wrongdoing of this plaintiff, but whereby the plaintiff has sustained grievous loss and damage to its credit and business standing, to plaintiff's damage \$10,000."

It was admitted in the answer and on the trial that the defendant had neglected and refused to pay the check and note, although the plaintiff had sufficient funds for that purpose in the bank; but it was also averred and shown that the failure to pay the check and the note was the result of a bookkeeper's mistake, it appearing that the regular bookkeeper was sick and that a new bookkeeper, who was put in his place and was not familiar with the

accounts, was responsible for the error. It further appeared that the defendant, upon its attention being called to the mistakes, rectified them so far as practicable by paying the check and note and writing letters of explanation, when the errors were discovered, to the holders of the check and the note. The plaintiff's witness testified that he told the Vice-President of the bank that the first letter of explanation sent was satisfactory and that when the plaintiff learned of the second mistake he asked for "the same class of letter to be written," which was done. These letters and the check and note are in evidence, and therefrom it appears that the check was dated March 3, 1900, and that the letter of the bank referring to it and dated March 12, 1900, states that the check was returned on the 7th inst. and the error on the books which caused its return had been adjusted. The note was dated December 15, 1899, for three months, due March 15, 1900; and the letter relating to it is dated March 24, 1900, directed to Chicago, Illinois, and states that the note due March 15 was returned through a bookkeeper's error.

At the close of the plaintiff's case the court directed a verdict for six cents damages.

O'BRIEN, J.: The single question presented upon this appeal is whether or not the plaintiff, upon the proof, can recover substantial damages. The appellant insists that when a depositor in a bank with sufficient funds draws checks or notes on such bank, which are refused payment on the ground that the depositor has no funds, the depositor, in an action brought against the bank, is not limited to the actual pecuniary damage alleged and proved, but in addition is entitled to recover general or substantial damages.

Here the plaintiff neither alleged nor proved any special damage, but insists that it is entitled to general damages upon the ground that this is in effect an action for slander of plaintiff's financial credit, and that the conduct of the defendant, as proved, is equivalent to proof "that the defendant on several occasions, and to several people, willfully and maliciously spoke of and concerning the plaintiff the false and defamatory words as follows: 'He draws checks on a bank when he has not sufficient funds to meet them.' The insistence is that these words are slanderous *per se*, and, as the charges were admittedly false, malice will be presumed, and the plaintiff is therefore entitled to recover substantial damages.

Apart from the question as to whether a corporation can commit slander (Odgers on Libel and Slander, 368), and conceding that there is some similarity between actions for slander and actions against a bank for wrongfully refusing payment of a check or note, the actions are not the same; and as the character of an action such as this has been frequently defined and discussed, it is safer to follow the decisions rather than to enter a new field of inquiry. In *Burrongs vs. Tradesmen's Bank* (87 Hun, 6) it is said: "The contract which the law implies between a bank and its depositor is that the bank will hold the funds and pay them out according to the order of the depositor. A failure in the performance of the duty which the law thus imposes upon the bank constitutes a breach of the contract which the law implies and renders the bank legally liable either in tort or upon contract." At the trial, on defendant's motion, the plaintiff elected to treat this action "as one in tort and not upon contract, and as founded upon malice, and not upon negligence."

As to the distinction to be observed as to the rule of damages between an action brought for the breach of a contract and one founded upon tort, we

need add nothing to what was said by this court in *Davis vs. The Standard Bank* (50 App. Div. 210), where the subject is fully discussed and the authorities collated. Therein the awarding of general damages was sustained, but it was because the bank intentionally, and with full knowledge of what it was doing, dishonored its depositor's checks, and in the opinion of this court it was said: "Whenever the wrongful act was done intentionally, without just cause or excuse, a legal inference of malice arises therefrom."

It is the presence of malice express or implied which in such cases determines the damages that may be awarded; and it is only therefore where it appears that the bank in refusing payment of checks acts willfully, without just cause or excuse, or with improper motives, that legal malice will be implied. This subject of legal malice will be found treated at some length in the *American and English Encyclopædia of Law*, 2d ed., vol. 19, p. 623, and also in the first edition, vol. 14, p. 8.

Without passing upon the question of whether the allegations of the complaint are sufficient to charge the defendant with legal malice, it is sufficient to say that upon the proof, it appearing beyond dispute that the failure of the bank to pay the note and check was not intentional, but was due to a mistake, there was no evidence from which legal malice could be implied; and, therefore, a basis for an award of general damages is wanting. A mistake which is excusable cannot constitute legal malice, for the element of conscious wrongdoing, or recklessness, or gross carelessness, is absent. There was no attempt to disprove the explanation offered by the bank to plaintiff's officers that the occurrence was due to a mistake of a new bookkeeper; and it would appear that the plaintiff accepted that explanation as true, as did the court in disposing of the case. The letters, moreover, tended to support, if support were necessary, the view that the failure to pay plaintiff's paper was inadvertent, and not intentional, and that as soon as the mistakes were called to the attention of the bank, it did what it could to remedy them.

We have not overlooked the allegation of the complaint wherein it is averred that after the dishonor of the note the defendant was informed thereof, "and the defendant then and there begged the plaintiff to overlook the occurrence and requested that the note be again presented. Thereupon plaintiff caused the said note to be again presented, and again payment was refused, and said plaintiff's note thrown out, protested and dishonored." Had this allegation been supported by proof, a different question would arise as to the right of the plaintiff to recover substantial damages. The record, however, fails to disclose any such proof, and the inferences fairly to be drawn from the entire case are that the bank, through mistake, refused to pay both the note and the check, and that when its attention was called to the two mistakes it at once undertook to remedy the errors so far as it was practicable to do so by sending the letters of explanation to which we have referred.

Upon the question of damages, therefore, we can briefly summarize the subject by saying that, as the plaintiff neither alleged nor proved any special damage, and as the evidence did not show that the defendant was guilty of legal malice, the court was right in restricting the recovery to nominal damages. It accordingly follows that the judgment and order appealed from must be affirmed, with costs.

Van Brunt, *P.J.*; Ingraham and McLaughlin, *J.J.*, concur.

COLLATERALS—ATTEMPT TO HOLD FOR DEBT NOT SECURED THEREBY IS A CONVERSION.

Supreme Court of Tennessee, May 11, 1903.

MEMPHIS CITY BANK vs. SMITH.

Where a bank attempts to hold collaterals as security for debts for which they have not been pledged, and refuses to deliver the same except upon the payment of such other debts, such refusal constitutes a conversion.

The declaration alleged in substance, that the defendant below (plaintiff in error on appeal) had converted certain property belonging to the plaintiffs below, consisting of the following, viz.: Many lists, files, maps, plats, and books of reference, containing an abstract or history of all real estate titles, tax liens, and judgments in Shelby county, from which were prepared and sold abstracts of title to the public, and from which the plaintiff derived great gains and profits; also 370 shares of stock, being the entire capital stock in a Tennessee corporation known as the Memphis & Shelby County Abstract Company; that the value of the property so converted was \$50,000; and that the plaintiffs, waiving the tort, were entitled to recover of the defendant, as upon an implied assumpsit, the aforesaid value. There was a verdict in the court below for \$23,875.40, on which judgment was rendered. The plaintiff in error appealed.

The court below charged, among other things, as follows: "The court charges you that if you find from the evidence that W. J. Smith went to the defendant bank prior to March 13, 1897, for the purpose of ascertaining the exact amount necessary to redeem the collaterals set forth and described in the declaration, and prepared to then pay such indebtedness and redeem said collaterals, and the bank declined to consider his offer unless he would not only pay the sum for which the said collaterals were pledged, but would also pay the individual debts of L. B. Eaton, for which said collaterals were not pledged, and declined to release said collaterals unless the unindorsed notes of L. B. Eaton were also paid, then the court charges you that this was, in law, a conversion of said collaterals by the bank, and entitled the owners of the collaterals, at their election, to sue for the value of the same."

NEIL, J. (omitting part of the opinion): When the whole charge upon the special subject under examination is considered together, it is perceived that the alteration which the plaintiff in error now complains of, in the matter which its counsel had formulated for use by the circuit judge in the preparation of his charge, could not have been misunderstood by the jury, and was in harmony with the general trend of the charge upon that subject. It is also perceived that all the instructions, as given to the jury upon the subject, were based upon evidence in the record, which had been submitted to the jury. So the real question is whether the whole instruction given to the jury upon this subject was correct. This in turn resolves itself into the question whether, under the facts assumed or indicated, the defendant below would be guilty of conversion. We think it would be. The assertion of a right to hold the property as security for debts for which it had not been pledged, and the refusal to deliver it up except upon the payment of those debts, was an unwarrantable assumption of authority over the property of defendants in error, and amounted to a conversion. (*Gillet vs. Bank of America*, 160 N. Y. 549-559; *Adams vs. Clark*, 9 Cush. 217.)

*PROMISSORY NOTES GIVEN IN PAYMENT FOR PATENT RIGHTS—STATE
STATUTE REQUIRING CONSIDERATION TO BE STATED IN INSTRUMENT.*

United States Circuit Court, E. D. Pennsylvania, May 25, 1903.

PEGRAM vs. AMERICAN ALKALI CO.

A State statute requiring that promissory notes given in payment for a patent right shall have the nature of the consideration stated on the face thereof is unconstitutional, being obstructive to the exercise of a right conferred by a law of the United States.*

This action was brought upon two promissory notes, one for \$20,000 and the other for \$30,000, both of which were renewals of certain drafts that had been given in payment for patent rights. One of the defenses was that the notes were void because neither they nor any of the drafts had the words "given for a patent right" written or printed on their face, as required by the statute of Pennsylvania. Such statute is as follows:

"An act to regulate the execution and transfer of notes given for patent rights.

Section 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same, that whenever any promissory note or other negotiable instrument shall be given, consideration for which shall consist in whole or in part of the right to make, use, or vend any patent invention or inventions, claimed to be patented, the words, 'given for a patent right,' shall be prominently and legibly written or printed on the face of such note or instrument, above the signature thereto; and such note or instrument, in the hands of any purchaser or holder shall be subject to the same defenses as in the hands of the original owner or holder.

Sec. 2. If any person shall take, sell, or transfer any promissory note or other negotiable instrument, not having the words 'given for a patent right,' written or printed legibly and prominently on the face of such note or instrument above the signature thereto, knowing the consideration of such note or instrument to consist in whole or in part of the right to make, use, or vend any patent invention or inventions claimed to be patented, every such person or persons shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be fined in any sum not exceeding \$500, or imprisoned in the county jail not exceeding sixty days, or both, in the discretion of the court.

Sec. 3. All acts or parts of acts inconsistent herewith are hereby repealed." (P. L. 1872, pp. 60, 61.)

DALLAS, *C. J.* (omitting part of the opinion): Plaintiff's counsel has submitted the proposition that "the act of April 12, 1872, entitled 'An act to regulate the execution and transfer of notes given for patent rights,' is unconstitutional, because it is in derogation of the rights of holders of letters patent issued by the United States to freely sell the same and take payment therefor in negotiable paper, and is an unjust and unauthorized discrimination against them, imposing a restriction upon them not imposed upon vendors of other property." The decisions of the State courts are not harmoni-

* The contrary has been held in the following cases: *Herdic vs. Roessler*, 109 N. Y. 127; *Tod vs. Wick*, 36 Ohio St. 370; *Haskell vs. Jones*, 86 Pa. St. 173; *Shires vs. Commonwealth*, 120 Pa. St. 388; *Breckhill vs. Randall*, 102 Ind. 528; *New vs. Walker*, 108 Ind. 365.

ous upon the subject of this proposition, but those of the Federal courts seem clearly to support it. In *Woollen vs. Banker*, 2 *Flap*. 33, *Fed. Cas. No.* 18,030, Mr. Justice Swayne at circuit, held a similar statute of the State of Ohio to be unconstitutional, and that decision cannot be said to have been overruled in *Patterson vs. Kentucky*, 97 *U. S.* 501. Although Mr. Justice Swayne appears to have concurred in the judgment in the latter case, no reference was there made to his ruling of the immediately preceding year in *Woollen vs. Banker*, and in fact the two cases are not conflicting. *Patterson vs. Kentucky* concerned only "the right of property in the physical substance, which is the fruit of the discovery," and it was with this respect to this "physical substance" that it was held that enforcement of the State statute interfered with no right conferred by the letters patent, and this upon the ground that "it is not to be supposed that Congress intended to authorize or regulate the sale, within a State, of tangible personal property which that State declares to be unfit and unsafe for use." The significance of the distinction here indicated is apparent. A patent secures to the patentee the right to debar others from making the thing patented, but it does not confer upon him the right to make it. That he could do (though not exclusively) without a patent. Consequently, his right of property in the patented article, when made, is not founded on Government grant, and may as legitimately be subjected to State legislation as any other tangible property. But the monopoly which a patent does grant is a property right created under the Constitution and laws of the United States, and by those laws made assignable; and therefore a State law which prescribes that negotiable instruments, in the ordinary form, shall not be given or accepted for an assignment of the patent itself, is as plainly obstructive of the exercise of a right vested by Federal law as would be the inhibition of payment in the current funds upon the sale of a patent for cash.

The limited scope of the judgment in *Patterson vs. Kentucky* was pointed out by the Circuit Court for the District of Indiana in the case of *Castle vs. Hutchinson* (C. C.) 25 *Fed.* 394, in which a State statute like that now in question was held to be clearly unconstitutional; and, in *Reeves vs. Corning* (C. C.) 51 *Fed.* 787, while the particular act there involved was upheld, it was said that the decision in *Castle vs. Hutchinson* "may well be supported on the ground of an unjust and unauthorized discrimination. It singles out notes given for patent rights from the common mass of such property, and requires them, to be valid, to show on their face the nature of their consideration. Such discrimination would seem to render the second section of the statute unconstitutional. If the section had required all notes to exhibit on their face the consideration for which they were given, a very different question would have been presented. In my opinion the case of *Castle vs. Hutchinson* is correctly decided; but it by no means is decisive of the question under consideration." I think that in view of these cases this court should decline to give effect to the Pennsylvania act of April 12, 1872, until its validity shall have been established by a tribunal whose adjudications are authoritative, and accordingly the defense founded upon that act is overruled.

It results from what has been said that the plaintiff is entitled to judgment for the full amount of the notes sued on, with interest thereon at the rate of six per cent. per annum, subject to any deductions which, under the evidence, independently of the Pennsylvania statute, should be allowed.

NOTE PAYABLE TO ORDER OF CASHIER—RIGHT OF BANK TO SUE ON.

Supreme Court of Michigan, July 8, 1903.

FIRST NATIONAL BANK OF HANCOCK vs. JOHNSON.

A bank may sue upon a note payable to the order of its Cashier, though not endorsed by him.*

This suit was brought to recover the amount of a note, upon which defendant was an accommodation maker. The court below directed a verdict for the plaintiff.

CARPENTER, J. (omitting part of the opinion): The note was payable "to the order of William Condon, Cashier, at First National Bank, Hancock, Michigan." It was never endorsed by Condon, though the evidence showed him to be plaintiff's Cashier, and that he acted in the transaction for the plaintiff. It is insisted that, under these circumstances, suit could not be maintained in plaintiff's name. This objection is fully answered by *Garton vs. Union City National Bank*, 34 Mich. 279.

NOTICE OF DEFENCES TO NEGOTIABLE INSTRUMENT—WHAT WILL CONSTITUTE.

Court of Appeals of Maryland, June 30, 1903.

VALLEY SAVINGS BANK OF MIDDLETOWN vs. MERCER, *et al.*

To constitute notice of an infirmity in the instrument or defect in the title of the person negotiating the same, the person to whom it is negotiated must have had actual knowledge of the infirmity or defect, or knowledge of such facts that his action in taking the instrument amounted to bad faith.

This action was brought upon a promissory note executed by fourteen different persons as makers.

It appeared from the testimony that one Hanan, acting or pretending to act as agent for Delauder & Co., the payee of the note, undertook to sell a Spanish jack to certain residents of Frederick county for breeding purposes. The price of the animal was agreed to be fixed at \$1,800. The evidence showed, and, indeed, it was conceded, the whole transaction was a fraud on the part of the agent of the vendors, whose plan was to get subscriptions from eighteen persons of \$100 each to purchase the animal. He persuaded a Dr. Downey to subscribe in order that others might be induced to follow his example, and secretly gave him the money to pay his subscription. The defendants, with Downey, signed and delivered to Hanan, the agent or alleged agent of the vendors, three notes, each for \$600, for the purchase money agreed to be paid for the jack, the note sued on in this case being the first of the series.

Having thus secured the execution of the three notes, Hanan applied to one of the directors of the plaintiff bank, to get his assistance in borrowing money on them. After some negotiation and examination into the financial standing of the makers of the note, the bank decided to make a loan of \$1,600 to R. S. Delauder & Co., and take the three \$600 notes as collateral security.

*The Negotiable Instruments Law provides: "Where an instrument is drawn or endorsed to a person as 'cashier' or other fiscal officer of a bank or corporation, it is deemed *prima facie* to be payable to the bank or corporation of which he is such officer, and may be negotiated by either the indorsement of the bank or corporation, or the indorsement of the officer." (Section 72, New York Act.)

The proceeds of this loan were placed to the credit of Delauder & Co., and were subsequently checked out and used by them.

FOWLER, J. (omitting part of the opinion): First, then, in regard to the granting of the defendant's fourth prayer. In order to consider the question presented by this exception, we will have to refer to plaintiff's first prayer, which, as we have seen, was granted.

By this prayer the jury were instructed that if they find from the evidence that the defendants signed the note sued on, and that said note was indorsed by the payee, and delivered to the plaintiff for a valuable consideration, before said note became due and payable, and shall find that said plaintiff at the time it acquired said note had no notice of any fraud in the obtention of said note, or of any failure of consideration therein, then the plaintiff is entitled to recover the full amount of said note, less certain credits. The prayer thus concluded: "And there is no evidence in this case legally sufficient from which they can find that the plaintiff had any knowledge or notice of fraud, or want or failure of consideration in the making of said note."

The fourth prayer of the defendants, which was also granted, embodies in it the general and well-settled doctrine applicable to negotiable paper, that if there is fraud in the origin of the note the burden of proof is upon the holder to show that it came to him before maturity, in good faith, for value, and without notice of any infirmity or defect in the title of the persons who transferred it to him. But, in addition to the assertion of this general proposition, the jury are informed that "unless they believe from the evidence that said note was thus acquired by the plaintiff their verdict should be for the defendants."

It seems to us, in spite of the ingenious argument of the able counsel for the defendants to the contrary, that there is a direct and palpable conflict between these two instructions. By the first the jury are told that they cannot in this case find that the plaintiff had any knowledge or notice of fraud or failure of consideration in the making said note, while by the other they are permitted, if they will, to find from the same evidence that the plaintiff did not obtain the note in good faith. In other words, while they are told there is no legal evidence of knowledge or notice of fraud, they may yet find in point of fact that the note was not obtained in good faith. It is difficult, indeed, to understand how the holder of commercial paper can take it in good faith, without notice of defects in title, and without knowledge of fraud, and at the same time be in a position to have his good faith in the transaction questioned.

This is what the fourth prayer, in our opinion, allows the jury to do. It is most desirable, if possible, to free a practical question like this from fine distinctions, and we think the decisions of this court have shown a strong tendency in that direction. Thus, in the leading case of *Totten vs. Busey*, 57 Md. 446, the former learned Chief Justice of this court said: "The question is not what facts will or will not be sufficient to put the party on inquiry, but the question whether the party had knowledge of the infirmity of the note at the time of the transfer to him; or, in other words, whether he procured the note in good faith for valuable consideration." (*Maitland vs. Bank*, 40 Md. 568, 17 Am. Rep. 620; *Bank vs. Hooper*, 47 Md. 88; *Williams vs. Huntington*, 68 Md. 590, 601, 13 Atl. 336, 6 Am. St. Rep. 477.)

And so, in the case last cited, the present Chief Justice quotes the lan-

guage of Judge Alvey with approval, and says: "The question is one of fraud or bad faith on the part of the taker of the note."

In *Cheever vs. Pittsburg R. R. Co.* 150 N. Y. 65-67, 44 N. E. 701, 34 L. R. A. 69, 55 Am. St. Rep. 646, it is said: "The rights of the holder are to be determined by the simple test of honesty and good faith, and not by a speculative issue as to his diligence or negligence." Equally clear, simple, and broad is the rule expressed in section 75 of article 13 (our negotiable instruments act [Poe's Supp. Code, Pub. Gen. Laws]), by which, of course, we must be governed. The notice that section provides, which will prevent a holder of a note from recovering, is "actual knowledge of the infirmity or defect, or knowledge of such facts that his action in taking the instrument amounted to bad faith."

PROMISSORY NOTE—VALUABLE CONSIDERATION—COLLATERAL SECURITY FOR ANTECEDENT DEBT.

Supreme Court of Nebraska, January 8, 1902.*

LASHMETT vs. PRALL.

One who takes a promissory note as collateral security for an existing indebtedness is deemed a holder for value.

This action was brought to set aside a conveyance of land, and subject same to a judgment in favor of one William Lashmett. As a defense the defendant Prall pleaded an indebtedness due to himself from Lashmett on a promissory note for \$2,500. Lashmett in reply pleaded that Prall was not an innocent purchaser of such note.

AMES, C. (omitting part of the opinion): If Prall at the time the note was transferred to him had parted with a present consideration on the faith of it, he would have been protected by the familiar rules of the law merchant. But it is conceded that he accepted it as collateral security for an antecedent indebtedness.

We are not aware that this precise point has ever been before this court. The cases of *Helmer vs. Commercial Bank*, 28 Neb. 474, *Koehler vs. Dodge*, 31 Neb. 328, and *Cropsey vs. Averill*, 8 Neb. 152, were all instances in which the note was accepted as collateral security for an indebtedness then created, and are supported by the great weight of authority and reason. But in *Martin vs. Johnson*, 34 Neb. 797, it was held that one who accepted a negotiable note, without notice of defenses, in payment of an antecedent debt, was a *bona fide* holder for value, and precisely the same principles must apply to one who receives such an instrument as collateral security.

Such is also, we think, the weight of authority in this country and in England. (Colebrook on Collateral Securities, § 18 *et seq.*, and notes.) Prall is, therefore, entitled to be regarded as an innocent holder for value of the Sears Bros'. note to the extent of \$2,005 and interest.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

STATUTE OF LIMITATIONS—SIMPLE CONTRACT DEBT—CONVERSION INTO SPECIALTY DEBT.

BANK OF MONTREAL vs. LINGHAM (5 Ontario Law Reports, p. 519).

STATEMENT OF FACTS: In March, 1884, the defendant, Lingham, made two notes in favor of the Bank of Montreal for \$35,000 and \$25,000

* Withheld from earlier publication by order of the court.

respectively. At that time he was also indebted to his father in the sum of \$10,000 and had transferred certain lands to his father as security for the repayment of this sum. In June of that year the father and the defendant joined in a deed, to which the Bank of Montreal and its local Manager were the other parties, whereby these lands were conveyed to the local Manager as trustee with power to sell after notice in writing, and out of the proceeds first to pay the \$10,000 due to the defendant's father and then to pay the Bank of Montreal. Before anything further was done the defendant repaid the amount due his father. In February, 1893, the bank served a written notice on the defendant that unless the sum of \$124,044.10 was paid within one month the bank would proceed to sell the lands. In July, 1893, a deed was executed by the defendant, whereby, after reciting the trust deed of June 7, 1884, and the power of sale contained therein, and that, in order to avoid the expense of a sale, the defendant had agreed to execute a release, the defendant released to the bank all his interest in the said lands and procured all the heirs of his deceased father to join in this deed.

This action was brought upon two promissory notes and also upon the deed of June 7, 1884. The defendant set up that the claim was outlawed under the statute of limitations, and also that the deed of July, 1893, was an accord and satisfaction.

JUDGMENT (MACMAHON, J.): After disposing of the plea of accord and satisfaction as not being established by the evidence, the learned judge deals with the defence of the statute of limitations.

In Ontario a simple contract debt, such as that upon a promissory note, is outlawed after six years, while a specialty debt, such as that upon a covenant in a deed, is not outlawed until twenty years. The learned judge pointed out that the deed of June 7, 1884, while it did contain an acknowledgment by the defendant of the amount of his indebtedness to the bank and secured that indebtedness on the lands, did not contain a covenant to pay the amount admitted due.

The rule is laid down in *Marryat vs. Marryat* (28 Beavin p. 227): "The deed was executed not for the purpose of giving a security for the simple contract debt, which he admits to be due. It is to be observed that though you may infer the promise to pay from the recital, the promise to pay simply raises a mere *assumpsit*, unless the object of the deed is confined to that acknowledgment, but if the object of the deed is other than that, and merely collateral to it, then the recital amounts to nothing."

In a further case in *L. R. 3 Ch. P. 228*, Lord Cairns set out the principle as follows: "In the simple case of a debtor acknowledging a debt by a deed under seal, without any object declared by the deed, no doubt it must be assumed that, although no words of covenant are used, the debtor meant to be bound, or else why should he go through the form of executing a deed? But is the present a case of a party acknowledging a debt by deed under seal, with no other object but to acknowledge the debt? It is plain that he had another object. There was a clear antecedent liability in Harwood, arising out of his breach of trust. There was, therefore, no necessity for any acknowledgment, and if the desire of the parties was to fix a specialty obligation, they would have used unambiguous words for that purpose. I cannot doubt that the sole object of the deed was to give security for the debt and all the recitals appear to me not to be by way of covenant for payment of the

debt, but a simple narrative leading up to the security, and to the form in which the security should be given. In addition to this, there is a conspicuous absence of an express covenant to pay the mortgage debt."

The case in hand comes within the principle laid down in the above decisions, and it must be held that the acknowledgment by the defendant by the recital in the trust deed of the debt due to the bank did not convert it into a specialty debt. Nor did the deed of July, 1893, have that effect, because the only object the bank had in procuring it and the defendant's only intention in executing it was, as stated in the recital, "in order to avoid the expense of sale." There was nothing in the defendant's act in executing the release from which an intention could be implied to pay the debt and so waive the statutory defence which at that time already existed.

BILL OF EXCHANGE—ACCOMMODATION MAKER—RENEWAL NOTE OBTAINED BY FRAUD—RIGHT TO SUE ON ORIGINAL NOTE—POWER TO AMEND.

MATHEWS & CO. vs. MARSH (5 Ontario Law Reports, p. 540).

STATEMENT OF FACTS : This was an appeal from the judgment in an action brought on a promissory note dated April 4, 1899, made by the defendant and one McDonald in favor of the plaintiffs, payable two months after date. It appears that the defendant had joined in the note purely for the accommodation of McDonald, his co-maker, and that the plaintiffs knew that he was a surety only. When the note came due McDonald desired to renew it, and a renewal note was prepared by the plaintiffs which McDonald took away and later brought back with the signatures to it which purported to be those of the defendant and himself. Thereupon the plaintiff gave up the original note stamped, "paid." McDonald died insolvent in July, 1900. The plaintiffs tried to get the amount of the note from his estate, but failing in this brought action against Marsh on the renewal note. At the trial Marsh swore he never signed the renewal note, which was the one sued on. There were two new trials and at the third trial the judge allowed the plaintiffs to amend their claim by adding in the alternative a claim upon the original note which Marsh admitted signing but which the plaintiffs had delivered up. In the result a verdict was given for the plaintiffs for the full amount of the original note, interest and costs. From this judgment the present appeal was taken on the grounds : (a) That the court had no jurisdiction to make the amendment; (b) that when the first note was given up to the maker the payee's right was gone and the note was a cancelled document; (c) that by taking a renewal note the plaintiffs had given time to the primary debtor to the surety's prejudice.

JUDGMENT (STREET, J.) : The plaintiff's claim was within the jurisdiction of the division court and the fact that they claimed it as alternative to another claim which was also within the jurisdiction did not take it beyond the jurisdiction. There was also undoubted right in the judge below to make the amendment in the plaintiff's claim.

I have no grounds for interfering, on the facts, with the verdict of the jury. The defendant was admittedly liable originally to the plaintiffs upon the note of April 4, 1899. If the plaintiffs were induced by the fraud of McDonald to give him up that note in exchange for another upon which the defendant's signature was forged, the cases show that the plaintiff's remedy

upon the original note remains in equity even though the note itself may have been cancelled and given up. I think also that the witness McConachie was entitled to look at the entries made by him in the books of the deceased McDonald in order to refresh his memory and that the entries in the books to which he referred were properly before the court.

The decisions also require us to hold that the renewal of the original note without the defendant's consent is no answer to the claim upon the original note where the renewal was obtained by fraud. The appeal must therefore be dismissed.

*MUNICIPAL CORPORATIONS—LIMIT OF BORROWING POWERS—MEANING OF
"ORDINARY EXPENDITURE"—SCHOOL RATES.*

HOLMES vs. TOWN OF GODERICH (5 Ontario Law Reports, page 33).

STATEMENT OF FACTS: This was an appeal from the judgment given by ROBERTSON, J., at the trial dismissing the plaintiff's action with costs. The plaintiff sued on behalf of himself and all other ratepayers of the town of Goderich to restrain the defendants from discounting or in any way dealing with the note or the proceeds of the same, for \$2,000 then in the Bank of Montreal. The defendants were the Town Corporation, the Mayor and Treasurer, and the Bank of Montreal.

The ground relied upon by the plaintiff was that the town had no authority to borrow this money from the bank under sec. 435 of the municipal act, inasmuch as they had previously borrowed within some \$400 of the eighty per cent. of the current levy for ordinary expenditure permitted by that section.

JUDGMENT: The judgment of the Divisional Court was delivered by STREET, J.

The borrowing can be supported, it seems to me, only under sec. 435 of the municipal act, if it is to be supported at all. A by-law was passed under that section on February 15, 1901, reciting that it was desirable and necessary to make provision for the borrowing of money for the current expenditure of the corporation until such time as the taxes levied therefor could be collected. The by-law then proceeds to empower the mayor and treasurer of the corporation to borrow \$15,000 upon the notes of the corporation, countersigned by them.

On May 17, 1901, another by-law was passed amending this by-law by increasing the amount authorized to \$22,000. A note for \$2,500 under this by-law was made by the mayor and treasurer on December 10, 1901, and \$2,000 was on that day advanced to them for the purpose of being paid into court as security upon the appeal in the then pending case of Holmes vs. Goderich. Including that note, the total amount then under discount with the bank under the by-laws above mentioned was \$19,500.

The question of the right to borrow this sum turns upon the meaning to be given to the various portions of sec. 435 of the municipal act.

The general object with which that section was passed is sufficiently obvious. It is the duty of the council to make an estimate of the expenditure for the coming year, and to strike a rate and levy taxes to meet it; but the taxes cannot be immediately collected, and money is required from day to day after the year begins to meet daily demands provided for in the esti-

mates. It is necessary that the corporation should have funds at once, and they are authorized to borrow for the purpose of meeting the demands upon them; but in order that they may be prevented from making use of this authority to a greater extent than that intended, the amount they are permitted to borrow and the period of the loan are strictly limited, with the plain intention that the amount borrowed shall be paid out of the taxes for the year in which it is borrowed, as they are collected.

I think it is plain that the intention of the section was to separate the amounts estimated for school purposes from the amounts estimated for other purposes, because the school funds are separately dealt with under the fourth sub-section. There is good reason for this separation: the municipal corporation merely collects and holds for the school corporations the taxes it levies at their request, and they should obviously be kept apart for school purposes and not be confused with the ordinary current expenditure.

Therefore, when the town corporation seeks to borrow money under the first and second sub-section of section 435 for the ordinary current expenditure of the municipality, it is limited to eighty per cent. upon the amount collected for taxes in the preceding year, exclusive of taxes collected for school purposes. When it seeks to borrow money for the purpose of paying it over to the school corporations, it must recite in the by-law that it is borrowing it for school purposes under section 4, and it can then borrow to the full amount of the estimates submitted by the school corporations.

The by-laws under which the defendants seek to justify the present borrowing recite that it is for "the current expenditure of the corporation." For the reasons I have given, I think this cannot include expenditure on account of school funds, and so in calculating the eighty per cent., which the corporation may properly borrow, the sums levied for school purposes must be omitted.

Now, the amounts estimated in 1900, exclusive of school rates for which taxes were levied, was \$21,774.12 and eighty per cent. of this is \$17,419.26. It is admitted that the amount under discount in the bank before this note in question was discounted was \$17,000, and therefore \$419.26 was the utmost sum which the corporation could borrow under the construction I have placed upon the provisions of section 435.

I think the borrowing was objectionable on another ground. By sub-sec. 3 of sec. 435, the powers conferred by the section "shall not be exercised except for the purpose of meeting the ordinary expenditure of the municipality." It is admitted that no provision was made in the estimates for the year 1901 for this sum of \$2,000. An outlay which was not contemplated when the estimates were prepared, and for which no provision, either special or as a possible contingency, was made in the estimates for the year, cannot possibly be deemed part of the "ordinary expenditure" for the year, without disarranging the whole financial scheme provided for by the estimates. An exceptional case might, of course, occur when some contingency which had been provided for had been found to be unnecessary, but there is no suggestion of such a state of things here.

In my opinion, therefore, the corporation of the town and the mayor and treasurer exceeded their powers in borrowing the \$2,000 in question.

BANK NOTES ARE LEGAL TENDER UNLESS OBJECTED TO AT THE TIME OF PRESENTMENT TO THE OBLIGEE.

STEWART vs. FREEMAN (New Brunswick Equity Reports, Vol. 5, p. 451).

STATEMENT OF FACTS: This was a bill brought for the enforcement of an agreement for sale, whereby the plaintiff on paying a final sum of \$150, on or before October 6, 1901, was entitled to a conveyance to him of certain property. On October 3 the plaintiff tendered to the defendant the sum of \$150, made up of bank notes which the defendant refused to accept, though he gave no reason at the time, but appeared anxious to back out of the agreement which he subsequently refused to carry out, defending this action upon, among others, the ground that the plaintiff had not made a tender of the sum due in such form as to amount to a legal tender.

JUDGMENT (BARKER, J.): It seems that on October 3 the defendant, who lives but a short distance from the plaintiff, was at the plaintiff's house. There is no doubt from the evidence that the plaintiff had the sum of \$150 there for the purpose of paying it to the defendant; that he then and there produced it and then and there distinctly offered to pay the defendant the \$150 as the balance due on the purchase in performance of the condition subject to which he was entitled to have a conveyance. Neither is there any doubt as to the defendant understanding at the time the purpose for which the money was being offered him.

It is said that this was not a legal tender because the money tendered was in bank notes, which are not by the Bank Act or other statutes declared to be legal tender. I cannot agree with this. I think it quite likely that there was not a legal-tender note among the \$150 in bills produced at the time; but what difference does that make if the defendant did not object to them on that ground? They were bills which passed as money in the commercial world and of the kind used by every one in the discharge of legal obligations, and the defendant did not object to the kind of bills at that time.

Tender held good and judgment for specific performance of the agreement.

REPLIES TO LAW AND BANKING QUESTIONS.

Editor Bankers' Magazine :

STANTON, Neb., Sept. 16, 1903.

SIR : A loans to B one thousand dollars on his promissory note. B fails to pay when note becomes due. A commences action to recover judgment and B is regularly served by summons, to which he pays no attention, neither answers nor demurs, and judgment is rendered against him for amount claimed. During the pendency of the action, B entered into voluntary bankruptcy, and was discharged before said judgment was decreed. Is the judgment valid against B?

SUBSCRIBER.

Answer.—If the indebtedness upon which the action was brought was included in the bankrupt's schedules, then the decree of the bankruptcy court applies to it, and the indebtedness was discharged, notwithstanding the subsequent entry of judgment in the State court. That judgment is a nullity, for the State court has no jurisdiction to proceed in the case after the jurisdiction of the Federal court had attached.

NATIONAL BANK NOTES AS BANK RESERVES.*

The banking situation, especially in New York city, during the summer and autumn of 1902, and to a lesser extent during the spring of 1903, exhibits some features of the gravest interest. The banks were increasing their profit account heavily, and the general trade conditions were so prosperous and sound that a long-continued period of money stringency and high interest rates developed surprisingly few failures or evidence of financial and commercial weakness. Had not the situation been at bottom a healthy one, the imminent danger of a disastrous panic could hardly have been avoided, even by the most careful management of the men to whom the banking interests of the country are committed; a group of men whose genuine but enterprising conservatism and financial wisdom has perhaps never been excelled in any land or time. The main cause of the trouble that existed seems to be so close to the surface that the student of financial affairs can perhaps hardly fail to see it at a glance, and as the summer and autumn of 1903 promise to repeat the experience of 1902, it is well worth while to bear in mind the facts of the case, not only to handle the situation this year but to inquire what may be done to remove or to mitigate the causes which presage the same difficulties each recurrent year in the future.

Briefly stated, the immediate trouble seems to be due to the fact that the growth of the banking business has been so great that the specie and legal tenders which alone are available for banking reserves are no longer sufficient at all times to carry the unprecedented line of deposits in the banks, and it is well to bear in mind what is the origin of the greater part of the line of bank deposits. Taking the whole body of banks throughout the country, it is of course only elementary finance to say that bank deposits themselves are to a very large degree merely the product of bank loans. If a bank makes a loan of \$100,000 that amount is at once *ipso facto* added to the deposits of that bank or some other, and when checked against the checks go into the deposits of some other bank, a very small proportion of the whole loans of the country being withdrawn in actual money but the great bulk of the general transactions being a simple shifting about from the deposits of one bank to another of the sum by which the general deposits have been increased by the loan passed to the borrower's credit. If, therefore, the general item of loans is increased in a given period by \$10,000,000 one may look for an increase of general deposits of about the same sum, and this in its turn means an obligation to increase the legal-tender reserve which under the law the National banks are required to keep against deposits. And when a bank officer finds his deposits have so expanded, without a corresponding increase in the legal-tender money in his vaults, that his reserve is no longer sufficient, he must call loans in the hope of drawing legal-tender money from other

*The figures used throughout are those furnished by the United States Treasury reports, except those in Table A, which are compiled from the columns of the "N. Y. Financial Chronicle."

banks through his exchanges, and of course he naturally calls loans that he has made to those who are not depositors in his bank in the hope of keeping up his own deposit line at the expense of the banks upon whom his debtors draw their checks to repay him. So far as the individual bank is concerned that is a simple and effectual remedy, but when it is generally applied the effect becomes different. The borrower has no actual money to pay his loan with, he does it by check against deposits, so that a general movement to reduce loans means the reduction of the general deposits. The application of the principle is varied, of course, by the various expedients of shifting loans and money from one financial center to another in the effort of every bank to keep up its reserve without decreasing its deposit line, but sometimes we see a deliberate movement towards a general calling of loans for the simple purpose of decreasing deposits so that the lawful money reserve in hand, which there is little immediate hope of increasing, may have a lesser burden imposed upon it. The problem then is not where can more lawful money be had to carry deposits, but to reduce deposits so that the money in hand will be sufficient to carry them; and loans are called specifically to reduce deposits because out of deposits they must be paid.

This appears to have been the situation and the remedy applied in New York last year. In the early part of 1903 some uneasiness was created by the great expansion of loans shown by the weekly bank statements of the New York Clearing-House. Why? Because the corresponding expansion of deposits grew with the loans, putting a corresponding increased burden on the lawful money available for reserve, the proportion of which (not the actual amount) began to shrink towards the danger point. From the commercial standpoint the security that the banks have for their loans is the first consideration; but from the standpoint of the safe working of the strictly financial machinery, what makes trouble in a case of this kind is the amount of deposits—produced by increased loans—which the lawful money reserve, in hand or to be had, will not carry. A glance at the comparative bank statements of the New York Clearing-House for a brief period will make the situation fairly clear, although it would doubtless be much clearer if the figures were those of actual conditions on the dates given instead of being weekly averages. (See Table A, page 532.)

It will be seen that from July 12, 1902, to August 16, the reserve was fairly constant, increasing a little during several weeks by the temporary inflow of money which then began to go out again; but during the same period the loans expanded by about \$12,400,000 and the deposits by about \$18,000,000, so that the surplus reserve had fallen off more than \$5,000,000. Loans the following week shrank some \$10,500,000 and deposits about \$12,000,000, and the same movements continued week by week until, by October 4, the loans were less than on August 16 by nearly \$57,000,000, the deposits by \$88,000,000 and the money reserve by \$27,325,000; or, in other words, the New York banks, being obliged to send away some \$27,000,000 in legal money, were under the necessity of still further contracting their deposits by about \$60,000,000 by reducing their loans to that amount; otherwise, of course, the legal money they still held as reserve would have been many millions short of the legal requirement. It will be seen by reference to the table that much the same process went on in the early months of 1903. The "average" system obscures the matter to some extent, but it is fairly obvious notwithstanding.

Table A.—Weekly Averages of Loans, Deposits and Reserve of the New York Banks from July 12, 1902, to March 21, 1903.

(From the New York Clearing-House Statements as given in the "Financial Chronicle.")

* Deficit.

Now, the whole banking interests of the United States have shown phenomenal growth during the past twenty-five years, while the legal-tender currency has decreased, throwing the burden of reserve chiefly upon an accumulation of specie, largely in the form of gold and silver certificates. The num-

Table B.

(The figures are those of the whole National banking associations of the United States.)

	Net deposits.	Reserve held.	Lawful money.	Due from reserve agents.

September 30, 1892	2,022,500,000	570,900,000	327,400,000	236,400,000
October 3, 1893	1,573,700,000	513,900,000	346,400,000	158,500,000
October 2, 1894	2,019,200,000	660,400,000	402,900,000	248,800,000
September 28, 1895	1,989,300,000	571,400,000	340,100,000	222,300,000
October 6, 1896	1,798,700,000	543,600,000	343,100,000	190,100,000
October 5, 1897	2,195,600,000	695,900,000	388,900,000	297,000,000
September 20, 1898	2,479,700,000	750,500,000	420,700,000	320,000,000
September 7, 1899	3,031,500,000	890,500,000	466,300,000	414,100,000
September 5, 1900	3,281,000,000	983,300,000	518,500,000	450,700,000
September 30, 1901	3,661,600,000	1,012,200,000	539,500,000	456,600,000
September 15, 1902	3,844,400,000	804,300,000	508,000,000	280,500,000

[NOTE—The discrepancy between the amounts of "reserve held" and the totals of "lawful money" and "due from reserve agents" items is accounted for by the amounts in the "redemption fund" with the United States Treasurer which are a part of the reserve but not included in this table.]

ber of National banks has grown from 2,081 in 1877 to 4,601 on September 15, 1902, with an aggregate capital and surplus of more than \$925,000,000. The deposits have grown during this period from \$669,100,000 to \$3,844,400,000 while the reserve held in New York city alone is often much greater than that of the whole body of National banks in 1877. Table B, on the preceding page shows very strikingly the growth of the banking business and its rapid advance in the last few years.

It will be noted, therefore, that in twenty-five years the deposits increased \$3,175,300,000, while the lawful money held only increased \$385,000,000, and some months earlier than the last date given the deposits were doubtless much larger. The total lawful money held September 15, 1902, was made up as follows:

Gold and gold certificates.....	\$298,862,066
Silver dollars and silver certificates.....	59,616,195
Silver fractional coin.....	7,757,859
Legal-tender notes (greenbacks).....	141,757,618
	<u>\$507,993,738</u>

It will also be noted that in the five years from 1897 to 1902 the deposits increased \$1,648,800,000 while the lawful money held increased but \$119,100,000. In the last six years the deposits have more than doubled.

In this connection the following table of the status of other financial institutions outside of the National banking association is of interest:

Table C (June 30, 1902).

	Capital and surplus.	Cash on hand.	Deposits.
6,049 State banks.....	\$356,180,637	\$178,613,735	\$1,698,185,287
4,188 private banks.....	177,630,213	9,388,069	131,660,948
727 loan and trust companies..	348,446,817	31,996,655	1,525,987,498
		<u>\$319,998,449</u>	<u>\$3,355,742,728</u>
Savings banks.....		30,877,398	2,650,104,496
		<u>\$250,815,787</u>	<u>\$6,005,847,214</u>

The cash holdings of these institutions against over \$6,000,000,000 deposits were made up as follows:

Gold and gold certificates.....	\$106,152,188
Silver and silver certificates.....	30,137,029
* Paper currency.....	86,217,289
* Not classified.....	23,809,281
	<u>\$250,815,787</u>

* Probably largely National bank notes.

The enormous banking growth the figures disclose was only made possible by the very large credit balance of foreign trade for a series of years, which enabled the accretion of specie from abroad, and by the legalizing of silver which went on for a number of years. The latter source of supply has ceased, there can be no further expansion of silver legal reserve. There is a slim prospect of drawing gold from abroad to provide legal reserve for further increase in bank deposits, since the annual output of the mines is no more than is needed for the legitimate general growth of money transactions and we can at best hardly hope for more than our share from this source. Indeed as the figures of January 1, 1902, show that the United States then held \$1,174,600,000 in gold out of a total of \$5,174,400,000 for the whole world, it would seem to be evident that we have more than our share already, since

we have more than double the holdings of Great Britain, nearly \$400,000,000 more than the whole British Empire, and nearly \$300,000,000 more than France.

In 1875 the total coin and paper currency in circulation in the United States, outside of the Treasury, was \$754,101,947; in 1902 it was \$2,249,390,551.

The problem then would seem to be either to keep business expansion and bank deposits down to narrower limits, or to devise some way in which larger deposits may be safely carried. The process of business increase has been going on at a rapid pace, although there is every indication that the growth is in the main natural, normal and healthy; and to check growth is a delicate matter. To cut off an unhealthy growth—whether in the physical human body or the human financial body politic—entails serious risk of loss by shock and impaired vitality; while to check a normal, healthy growth means an inevitable derangement of vital forces, an almost inevitable producing of diseased conditions, and is a dangerous enterprise at the best. If our present business growth is not sound, a collapse will bring us to grief and to a general revision of conditions later on, without doubt; but the common judgment of those whose opinions carry weight is that our trade conditions are in the main sound and healthy; so that if we are to continue growing, it becomes imperative to look about for some means by which there shall be a larger available reserve for the banks, or else that they shall not be forced to carry so large a percentage as the law now requires. The reducing of the legal requirement, however, would probably produce a more or less unfavorable feeling of uneasiness; and as a matter of fact the money reserve of the whole body of National banks in September, 1902, amounted in actual legal money to only about 13.2 per cent. of their deposits, while the State banks, private banks, trust companies and Savings banks carry very little, about 4.2 per cent. including National bank notes. The small reserve of the National banks is due to the operation of the provision allowing a certain portion of the reserve to be carried in the form of a deposit with the "reserve agents" who in turn are only obliged to carry twenty-five per cent. in lawful money against it. Setting aside, therefore, the suggestion of a reduction of legal percentage, the question comes as to where more money is to be had. The Government might, perhaps, pay off a considerable part of its bonded indebtedness, issuing instead an equivalent in legal tenders or greenbacks; this would help solve the problem, but the whole weight of financial opinion is against any increase in this form of public indebtedness. There is another measure which would probably provide a safe and adequate solution, but it involves so radical a departure from the present methods of governmental finance that it is not intended to discuss it here.

There is, however, one measure of relief which may be readily available, and that is a change in the law so that National bank notes may be counted in the reserve. If the present issue of National bank circulation should not be increased the relief from this source, while definite, would be very small, since only an insignificant part of the outstanding circulation is held by the banks themselves, being in September, 1902, \$22,861,873, while the total amount outstanding in that month is given as \$361,282,691, and in November as \$380,476,334.

The statement of the forty-four banks of New York city, made to the Comptroller of the Currency, September 15, 1902, shows that they held alto-

gether but \$736,944 in National bank notes, of which two banks had none at all and only four as much as \$50,000 each; although, as they were below their reserve at this date by \$2,283,968, even this measure of relief would have been welcome. The circulation of these forty-four banks at the same date amounted to \$34,679,177, and it would seem that if National bank circulation had been available for reserve there ought not to have been much trouble in increasing it a few millions more under the incentive of providing a ready means to turn a deficit into a balance on the surplus side.

The question would seem to narrow itself down to two considerations: Would National bank notes be safe as a part of the legal reserve? And would the circulation be increased sufficiently to make the measure of relief one of any importance?

In regard to the consideration of safety, it is hard to understand how there need be much fear since the notes are universally accepted as the equivalent of legal tender except by the Government itself. The Treasury is responsible for their redemption, they have United States bonds back of them, and even the notes of insolvent banks pass current without question. In fact the notes of insolvent banks have been known to command a premium as high as five per cent. as an inducement to send them in for redemption.

Indeed in recommending that the banks be allowed to issue "circulation based upon general credits" instead of requiring the deposit of United States bonds, Secretary Shaw (annual report 1902) says: "Neither do I believe it necessary to make currency thus issued a first lien upon assets. A very small tax upon circulation would be sufficient to cover any possible loss. The Government actuary has demonstrated that a tax of one-eighth of one per cent. upon circulation would have covered all loss from the beginning of our National banking system to the present time, had each bank maintained its limit of circulation. Instead of calling this a tax, suppose it be called 'premium on insurance' and the Government the 'underwriter.' The banks could be required to redeem their circulation at reserve cities, and the Government would never suffer injury or embarrassment as an insurer against ultimate loss. The lowest tax suggested by anyone would far exceed any possible loss, and the Government could assume responsibility to the people and still realize a profit." Surely a currency upon which the Government would make a profit by guaranteeing it ought to possess every function of legitimate banking reserve, at least to the extent of a portion of the amount required to be carried.

But would the banks be willing to increase their circulation by an amount that would give the suggested relief? At present many of them see little advantage to themselves in buying Government bonds as a basis for circulation, but if to carry their deposits larger reserves are required and are not to be had otherwise, it seems fairly evident that this pressure would bring about a considerable increase in bank circulation if it should be vested with the function of a legal reserve.

Secretary Gage (last annual report, 1901) proposed a plan by which he was confident the banks could be induced to issue additional circulation sufficient to take up and retire the whole of the present issue of United States notes (greenbacks); and surely it ought not to be difficult to devise a system under which they would issue circulation to protect their own reserves and carry on on their own business when it is threatened with straitened resources.

Secretary Shaw's suggestion, if incorporated in the law, would no doubt provide an easy way, or some modification of Secretary Gage's plan might be equally effective and might recommend itself by having at least the appearance of greater conservatism. But if these gentlemen are right in thinking that the plan they advocate will result in a very largely increased and flexible bank circulation, the question whether the banks would issue circulation to protect their reserves is merely one of details.

There seems to remain, however, one thing to be said. The total coin and paper money in circulation, outside the Treasury, being \$2,249,390,551 and of this there being only about \$760,000,000 in the banks and other financial institutions, there was in September of last year the enormous sum of about \$1,500,000,000 in the hands or pockets of the people at large. The amount seems unnecessarily large, but there is no apparent way in which any considerable portion, at certain seasons of the year when crops are to be moved, can be diverted from this use and kept in the banks where it really belongs. A very considerable increase in the number of small banks in remote parts of the country would probably accomplish it, but this in the nature of things must be a very gradual process, and meantime the stress is apparently growing imminent.

JOSEPH HORNOR COATES.

SAVINGS BANKS IN MEXICO.

Mexico has until recently been without a system of Savings banks. Even the commercial banks do not carry large deposit accounts, except under the form of current creditor accounts against the merchants to whom they extend their credit. A charter has just been granted for the creation of a Savings bank in the State of Chihuahua, which will soon be in operation. The author of the project is Mr. Enrique C. Creel, the well known Mexican capitalist, who has recently been in Europe as Chairman of the Mexican Commission on International Exchange.

The new bank for Chihuahua will be founded with a nominal capital of about 200,000 pesos, which will be paid up in proportion to the increase of deposits. The new bank is authorized to establish branches.

It is Mr. Creel's belief that the system of Savings banks can be extended gradually throughout Mexico, and that it will prove of great benefit to the common people in stimulating habits of saving, and to the financial resources of the country by drawing into use capital which may now be idle in private boards.

While the new institution will be a private corporation rather than a Government establishment, arrangements will be made to attract small savings under some such system as the postal Savings bank organization in England and on the Continent. Mr. Creel believes that the habit of saving will make rapid headway when the new system has been inaugurated and its benefits made plain to the people. It is probable that his brother, Mr. Juan A. Creel, will be the President of the bank in Chihuahua, but Mr. Enrique C. Creel will be one of the directors and will bring his constructive ability and public spirit to the service of the bank.

W. IRVING OSBORNE, Vice-President.

A. UHRLAUB, Vice-President.

CHAS. G. DAWES, President.

W. R. DAWES, Cashier.

LAWRENCE O. MURRAY.

THE CENTRAL TRUST COMPANY OF ILLINOIS, CHICAGO.

The Central Trust Company of Illinois, Chicago, with a capital of \$4,000,000 and a surplus of \$1,000,000, began business somewhat over a year ago—to be exact, July 8, 1902. It is a typical modern banking institution, with a strong board of directors and an efficient corps of officers. It is enterprising in its methods of doing business and conservative in the management of its affairs.

Its organizers, headed by Charles G. Dawes, formerly Comptroller of the Currency under President McKinley, believed there was need in Chicago for an institution equipped to do a general banking, savings and trust business with a large capital, and the strength, success and growth of the Central Trust Company of Illinois have demonstrated that this belief was well founded.

The officers and directors of the Central Trust Company of Illinois are :

Officers : Charles G. Dawes, President ; W. Irving Osborne, Vice-President ; A. Uhrlaub, Vice-President ; William R. Dawes, Cashier ; L. D. Skinner, Assistant Cashier ; Lawrence O. Murray, Secretary and Trust Officer ; Malcolm McDowell, Assistant Secretary ; Max Pam, General Counsel.

Directors : A. J. Earling, President C. M. & St. P. Ry. ; Max Pam, Pam, Calhoun & Glennon, attorneys ; Frank O. Lowden, attorney ; Thomas R. Lyon, Lyon, Gary & Co. ; Harry Rubens, Rubens, Dupuy & Fischer, attorneys ; P. A. Valentine, Vice-President Armour & Co. ; Graeme Stewart, W. M. Hoyt & Co. ; Charles T. Boynton, Pickands, Brown & Co. ; Alexander H. Revell, President Alexander H. Revell & Co. ; Arthur Dixon, President Arthur Dixon Transfer Company ; Charles G. Dawes, Ex-Comptroller of the Currency.

The company has been successful in the best sense of that word, having attracted a large volume of business of a desirable and profitable kind. Great care was taken in forming the company to enlist solid and important interests in the organization and to provide fully for the proper equipment and conduct of the various departments. Especial attention has been given to handling reserve accounts of out-of-town banks and bankers and the courteous and efficient service rendered has produced gratifying results. In fact, the Central Trust Company has thoroughly established its right to be considered as one of the strong and conservatively progressive banking institutions of Chicago.

INDISPENSABLE TO UP-TO-DATE BANKERS.

TUSCALOOSA, Ala., Sept. 26, 1903.

The Bankers Publishing Co., New York, N. Y.

GENTLEMEN: My MAGAZINE for September came duly to hand, but was borrowed before I had a chance to read it, and has since been lost.

I would thank you to send me another one, as I am having them bound and do not want to have a break in my files.

I do not see how any up-to-date banker can get along without THE BANKERS' MAGAZINE.

Yours truly,

R. H. COCHRANE, *Asst. Cashier City National Bank.*

* THE PRACTICAL WORK OF A BANK.

EMBEZZLEMENTS AND DEFALCATIONS.

II.

"Every man has his price," is a trite saying, which the writer does not indorse, believing there are multitudes in and out of positions of trust whose integrity is beyond price; yet, as a continuous dropping of water will wear away a stone, there are too many honest and upright in thought and deed who finally yield to a continuous temptation and borrow (?) funds in their care without the consent of the lender (?)

How shall the bank management guard against exceptional mistakes in the selection of employees, or prevent such of judicious selection from being led into peculating practices?

The above seems to be the main question for this discussion, and it is assumed as a premise that all concerned are offering the petition, "Lead us not into temptation." The following suggestions are made in the belief that the tendency of the principles laid down is at least in the right direction:

(1st) Give the Cashier or other employee a fair salary and a liberal annual vacation—two to four weeks. Much stress is laid upon the latter suggestion as the best and most practicable prevention of wrong-doing that can be devised. The writer has in mind an incident wherein a board of directors urged their Cashier to take a week's vacation after having served several years continuously without vacating his desk. The offer was accepted, reluctantly perhaps, for during that week a shortage of several thousand dollars came to light, which might have continued and increased had the Cashier as usual—and as is too often the practice—kept exclusive control of the account in which the shortage was hidden. Very seldom would a Cashier enter upon a course of embezzlement if his accounts were to be placed in other hands for any considerable length of time, and so the vacation becomes a measure of restraint as well as a needed change and rest.

(2d) As a further restraint and educational practice it is suggested that a thorough—more thorough than is now usual—examination of the bank be made annually by a standing examining committee, and that one or more of such committee be delegated to attend the examination by the bank examiners, not only for the assistance to be rendered, but for the better qualification the average director would acquire for the duties assigned to his committee. The member of the committee so delegated could materially assist in the verification of the loan account especially, as he would be supposed to know as to the genuineness of all paper and any director's personal interest therein, and whether such paper has been approved by the full board—an essential requisite of good management.

(3d) While the resources of a bank can be readily and fully verified, it is not so easy a matter to verify its liabilities, especially as to the deposit account, and here is the opportunity where the tempter frequently gets in his work, in the form, perhaps, of promising speedy fortune from some speculative investment in stocks or

* A series of articles to be published in competition for prizes aggregating \$1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

options, the daily mail from Wall street containing the constant dropping of suggestions that too often wear away the supposed firm basis of integrity.

The Comptroller of the Currency, referring to irregularities in connection with the deposit account, has advised that all pass-books, when balanced, should be compared with the ledger accounts by some one who does not receive deposits or keep the individual ledger. The spirit of this advice has been followed by many banks, while others ignore it altogether as a too burdensome practice. Bank managers, having the fullest confidence in their employees, are inclined to "let well enough alone," and do not readily adopt new devices that increase the clerical work and expense account.

Well, after all the pass-books have been called in by postal-card, request, or otherwise—a practice that has not proved specially burdensome—and compared by this approved method, the limit of the bank's liability on deposit account is not assured; and the door to peculation is still open, most likely to be discovered by one looking for his opportunity.

How shall it be known or safely assumed that there are no deposit liabilities not shown in their proper place of entry, whether represented by pass-books, certificates of deposit, or Cashier's checks?

To diminish the possibility of loss from this source it is suggested that a system of countersigning all checks and certificates of deposit would be in the line of business prudence, and that all pass-books should be in the custody of the bookkeeper, and issued only by that official, not by the receiver of deposits.

When collusion of two or more becomes necessary to irregularities, the chances of such occurrences are very much reduced.

In case a Cashier does all the work of a bank, it is suggested that all pass-books to be presented for settlement should, by printed request on same, be deposited with one of the examining committee, or other person conveniently located and selected for the purpose, each accumulation to be taken to the bank at directors' meetings or oftener, and compared with the individual ledger. This practice might be applied more extensively with good effect.

With the foregoing suggestions in practice—not interfering with the dispatch of business—is the door to evil and loss still open or ajar to any dangerous extent? If so, then make it the duty of every holder of a standing liability against a bank by law on request to notify some designated official within a reasonable time of the commencement of such liability and the nature and extent of the same. Any claim not shown in the bank's books and representing embezzlement might be justly annulled by a neglect to comply with such a requirement.

It is safe to assume, however, that no serious irregularities will exist with the above suggestions in practice, the most burdensome feature of which is the one thorough annual intelligent examination to include the verification of every item of assets and liabilities.

Most bank managers will demur to this suggestion, saying that it will take weeks of time to make such an examination. If such examinations are made obligatory, ingenuity will devise an easy and practicable system. Besides, there is a credit side to the account likely in time to balance the debit.

Shut the door to embezzlement and the cost of official surety company indemnifying bonds will be very much reduced.

Let us all continue to pray, acting accordingly, "Lead us not into temptation."

EX-CASHER.

NEW YORK STATE BANKERS' ASSOCIATION.

*TENTH ANNUAL CONVENTION HELD AT SARATOGA SPRINGS, NEW YORK,
SEPTEMBER 10 AND 11, 1903.*

FIRST DAY'S PROCEEDINGS.

The tenth annual convention of the New York State Bankers' Association was called to order by President Stephen M. Griswold in the ballroom of the Grand Union Hotel, Saratoga Springs, on Wednesday, September 10, 1903, at 10 A. M. The convention was opened with prayer by Rev. Joseph Carey, Rector of Bethesda Protestant Episcopal Church, of Saratoga Springs. President Stephen M. Griswold then delivered the annual address, as follows :

PRESIDENT GRISWOLD'S ANNUAL ADDRESS.

As president of the New York State Bankers' Association it becomes my pleasant duty to welcome you to our tenth annual convention.

I am pleased to see the large number of bankers gathered here ; it shows that an increased interest is taken and that our association is growing in strength and power. " As goes the Empire State so goes the nation." This is true in the banking interest as well as in commerce or in politics.

The year which has passed, take it all in all, has been one of prosperity ; securities have fluctuated, some have declined. In fifty years of experience in business I have seen several of these periods of depression, but they soon pass away, leaving business in a better condition than it was before. With no foreign war on our hands, with good crops, manufacturers busy, the increased earnings of the railroads and the labor troubles moving toward a permanent settlement, there is no danger of financial panics or any serious trouble in business. On the other hand, we have years of prosperity before us. Our banking system, our commercial power, our agricultural and manufacturing interests, place the United States in the front rank of nations.

Several questions of importance to the banking business will be submitted to you by the council of administration for your consideration. They are now being discussed by the banking associations of other States ; we look to you for action. Among them is the advisability of admitting trust companies to membership in our organization ; the subject of the money order business of the country, which is now being done through the Post Office Department and the express companies (this business should be done by the banks), the question of calling upon the next Congress to take action upon the currency, and last, but not least, the question of paying interest on daily balances to individual depositors, which has grown recently to such an extent that it is making inroads upon the life, prosperity and safety of banks that do it to any extent. Safe and conservative banking interests demand that no such interest should be paid. The foundation on which the banking business should be built is absolute safety, and anything which tends to weaken this should be checked at once.

I desire to take this occasion to thank the officers and each member of the council of administration for their cordial and active support during the past year in

every measure for the welfare and success of the New York State Bankers' Association.

LEO SCHLESINGER, President of the Mechanics and Traders' Bank, of New York, offered a resolution thanking Secretary Shaw for the wisdom displayed in depositing the revenues, amounting to forty millions of dollars, in the banks. The resolution was declared out of order, and was withdrawn.

THE PRESIDENT: As many of you know, we have been deprived of the services of our secretary most of the time during the past year owing to his continued ill-health, and it has been rather difficult, therefore, to carry on the routine work of the association; but the council elected Mr. Lewis E. Pierson, Vice-President of the New York National Exchange Bank, to act as secretary, and he very kindly consented to serve, and he has done loyal and efficient work for the association since that time. I now call upon him to present the secretary's report.

ANNUAL REPORT OF THE SECRETARY.

ACTING SECRETARY PIERSON: Mr. President and Gentlemen—I beg leave to present the following:

The unfortunate illness of the association's secretary, Mr. T. Ellwood Carpenter, which we all very much regret, has somewhat interfered with the work of that office during the past year, and the detail work of the association is therefore covered by the report of the council of administration.

The present membership, shown by groups in the treasurer's report, is 455.

The one point which I would like to forcibly call attention to is the fact that that there are about 845 National and State banks and banking houses eligible to membership in the association but still outside of our organization. They should all be members.

On motion, the report was received and placed on file.

THE PRESIDENT: Next in order is the report of the treasurer.

ANNUAL REPORT OF THE TREASURER.

E. T. JOHNSON, of Glens Falls: I take pleasure, Mr. President, and gentlemen, in submitting my report as your treasurer, as follows:

SEPTEMBER 10, 1908.

Receipts.

Received from my predecessor, F. E. Howe.....	\$7,717.85
Received from old members, dues 1903-4.....	45.00
Received from new members, dues 1908-4.....	90.00
Received from H. P. Davison, for extra seats sold at banquet held at the Waldorf-Astoria	389.00
	<u>\$8,191.85</u>

Disbursements.

For taxation committee.....	\$71.32
For printing.....	53.70
For banquet at Waldorf.....	2,798.30
For music at Waldorf.....	415.00
For rental of chairs, New York Clearing-House.....	75.80
For menus, Tiffany & Co.....	300.00
For stenographer, Charles A. Morrison.....	100.00
For officers' expenses.....	890.00
For disbursements to groups.....	1,347.00
For council meetings.....	688.65
For copies of Proceedings of 1902 Convention, Bankers Publishing Company	449.38
For sundry bills, stationery, etc., duly audited.....	101.96
Balance on hand.....	<u>\$842.96</u>

Total membership reported at last convention.....		445
Total membership for 1908-4.....		456
Divided as follows:		
Group I.....	51	Group V..... 81
Group II.....	37	Group VI..... 41
Group III.....	81	Group VII..... 48
Group IV.....	61	Group VIII..... 121
		455

Respectfully submitted,

(Signed)

E. T. JOHNSON, *Treasurer*.

On motion, the report was received and referred to the following auditing committee appointed by the Chair: James M. Donald, Hanover National Bank, New York; Frederick E. Lyford, Citizens' Bank, Waverly; F. T. Haviland, Farmers' National Bank, Hudson.

THE PRESIDENT: Next in order will be reports from the different groups, which is a very important part of our programme, as it shows the conditions existing in banking circles throughout the various sections of the State. The usual manner of proceeding is for the chairman of each group to respond briefly. The chairman of Group I is absent, and Mr. Bissell, of Buffalo, will report for that group.

GROUP I.

A. D. BISSELL, of Buffalo: I am sorry the chairman of our group has been detained and is unable to be present at this convention, but I will give you as near as I can remember what he said of the proceedings in the group during the past year.

The meetings that have been held were very successful and satisfactory. There have been no special meetings called, because there were no special subjects for consideration.

The general condition of the group is fairly prosperous, although it is not as active as it ought to be. The membership is about the same as it had been in previous years, and, considering the fact that we have had so many banks go out of business in the city of Buffalo for various reasons, I think the showing is quite creditable.

GROUP II.

ACTING SECRETARY PIERSON: Mr. Brewster, the chairman of Group II, has telegraphed that owing to illness in his family, he is unable to be present.

THE PRESIDENT: If there is no one here to report for Group II, a report can be prepared later and handed in to the Secretary for incorporation in the minutes of this meeting.

GROUP III.

E. O. ELDRIDGE, of Owego: Group III has only this to say for itself: That it has had one meeting during the year; that its membership has increased by one, and that it is in a decently thrifty condition. There have been no special events to call the members of the group together, nor have there been any special topics calling for discussion. We anticipate a most interesting time at our forthcoming annual meeting.

GROUP IV.

E. S. TEFFT, of Syracuse: We have had no meeting of our group since the last annual gathering. We expect to have our next annual meeting early in October. Group IV is in a prosperous condition, although I do not think we have increased any in membership.

GROUP V.

WILLIS G. NASH, of Albany: Group V has held only one meeting during the past year, namely, the annual meeting, which was held at the Troy Club on January 20. At that meeting the following officers were elected for the current year:

Willis G. Nash, of Albany, chairman; G. M. Jarvis, of Cooperstown, secretary. Members of executive committee: C. W. Bostwick, of Hudson, Henry Colvin, of Troy, M. C. Brown of Utica, F. S. Atwell, of Port Henry, William L. Howland, of Mechanicsville.

The business meeting was followed by a dinner presided over by Francis M. Mann, Jr., of Troy, the retiring chairman of the group. Eighty-three persons were present, and addresses were made by Hon. Stephen M. Griswold, president of the State Association, who spoke on "Problems of Interest to the Banker of To-day;" Rev. Andrew Gillies, of Troy, whose subject was "The Gospel of Wealth;" James H. Potts, editor of the "Troy Times," spoke on "Publicity as a Preventative of Trust Evils," and Rev. Henry R. Freeman, also of Troy, whose theme was "The Era of Peace."

Group V now has eighty-one members, being an increase of three over last year.

GROUP VI.

EDWARD ELSWORTH, of Poughkeepsie: Group VI has held only one meeting during the year, and that was the annual meeting which was held at the Hotel Manhattan, New York city, December 17. Matters relating to the group were discussed, and the annual election of officers took place.

The membership remains the same as last year, the group having lost one member by reason of consolidation and gained one new member. I may say that I have discussed informally with a number of the members various questions relating to matters of interest to the whole association, and I have nearly exhausted my stock of stationery in corresponding with members of the group about subjects suggested by the council of administration, and I am glad to say that I found great unanimity of opinion among the members of the group upon all these subjects. I may also say that I have corresponded with every bank within the limits of the group that is not a member of this association in the endeavor to induce such banks to become members, and I think we must all exert a strong personal effort in this direction if we are to bring in new members, besides endeavoring to reach them by letter.

GROUP VII.

HIRAM R. SMITH, of Rockville Center: For Group VII, which comprises the banks of the Boroughs of Brooklyn and Queens in Greater New York, and the counties of Nassau and Suffolk, representing the whole of Long Island, I have to report that the annual meeting was held on January 7. The speaker was elected chairman, and Henry L. Crandell, of the Bank of Long Island, secretary and treasurer.

Three group meetings have been held during the year, each of which was well attended and a keen interest manifested in the proceedings. Several meetings of the executive committee have been held during the year. The entire membership in the territory of the group consists of fifteen National banks and forty State banks. Of this number thirty-one State banks and twelve National banks are now members of the association. Of the thirty-one State banks reported six have merged and are now branches. The number of banks that have not as yet joined the association is twelve—three National and nine State. We have sixteen branch banks in our territory. During the year four State banks and two National banks have been organized. Also banks of Flushing and Jamaica and Far Rockaway have been merged under the name of the Bank of Long Island.

At the group meetings we have not thought to settle the currency question, or weighty financial matters, the occasions being used more for the purpose of becoming better acquainted personally, and in a conversational way endeavoring to improve, by comparisons, our methods and system of practical banking.

THE PRESIDENT: Mr. William A. Nash, President of the Corn Exchange Bank,

of New York, is chairman of Group VIII, and last night I received a letter from him reading :

I regret very much that I shall be unable to attend the council of administration of the New York State Bankers' Association at the Grand Union Hotel, Saratoga, on Wednesday evening, September 9. I doubt if my absence would very seriously interfere with the efficiency and wisdom of the deliberations of the council. Please present my compliments to my associate members.

Trusting that the annual meeting under your presidency will be a very successful and interesting one, I remain, very truly,

WILLIAM A. NASH.

Our secretary informs me that Mr. Curtis, of the Bank of North America, will present a report from Group VIII.

GROUP VIII.

A. H. CURTIS, of New York : I have been handed the following report of Group VIII, made by the secretary of the group, with the request that I present it. It is addressed to the acting secretary of this association, and I will ask him to read it.

ACTING SECRETARY PIERSON (reading): "New York, September 9, 1903. Lewis E. Pierson, Esq., acting secretary, New York State Bankers' Association, Sir: As secretary and treasurer of Group VIII, New York State Bankers' Association, I have the honor to report as follows:

The annual meeting of the group was held at the Lawyers' Club, New York, on the afternoon of May 9, 1903, Hon. J. Edward Simmons, President of the Fourth National Bank, New York, presiding, the guest of honor being Hon. Hamilton Fish, Assistant Treasurer of the United States, at New York. The report of the secretary for the year 1902 was read and placed on file.

The following-named gentlemen were elected officers for the year 1903-1904:

Chairman, William A. Nash, President Corn Exchange Bank, New York; secretary and treasurer, Chas. Eliot Warren, Cashier Lincoln National Bank, New York. Executive committee: Wm. M. Bennet, Cashier Bank of America, New York; Wm. A. Simonson, Vice-President National City Bank, New York; Charles H. Stout, Vice-President Liberty National Bank, New York; Chas. L. Robinson, Cashier Western National Bank of United States, New York; D. H. Pierson, Cashier Bank of Manhattan County, New York, and Messrs. Nash and Warren, the officers above mentioned.

The group has a membership of 119, divided as follows: banks 83, bankers 36. The annual dinner will be held probably on or about December 19, at the Waldorf-Astoria, New York; the exact details yet to be arranged by the chairman of the executive committee.

I might mention, in connection with the convention of the American Bankers' Association at San Francisco, California, that the secretary and treasurer of the group have arranged a special train for the bankers of New York, which will leave the Grand Central Station, New York city, on the evening of Tuesday, October 13. Full information regarding this train may be had from the representatives of the New York Central system who will be found at the headquarters of the association at the Grand Union Hotel. Very respectfully, Chas. E. Warren, secretary and treasurer."

THE PRESIDENT: This concludes the reports of groups. We have received some communications, which I will ask the secretary to read.

ACTING SECRETARY PIERSON: This letter has been received from Governor Odell:

My Dear Mr. Griswold:

I have your favor of August 31, and regret exceedingly that it will not be possible to accept your invitation to attend the convention on the 10th and 11th of September, or the banquet on the evening of the 10th, owing to other engagements made for those dates. It would give me a great deal of pleasure to accept the invitation, I assure you, if I could do so.

Thanking you for the courtesy, I am very truly yours,

B. B. ODELL.

Also the following letter from Judge Dexter, one of the former presidents of this association :

I deeply regret that the condition of my health continues such that I am unable to attend the annual meeting of the New York State Bankers' Association at Saratoga this year—the first time I have failed. My interest, however, continues, and I hope to be with you at the next meeting. Please convey my regrets to inquiring friends.

Trusting that you will have a successful and pleasant meeting. I am,

Yours sincerely,

SEYMOUR DEXTER.

Also the following telegram from Charles H. Stout Vice-President Liberty National Bank, New York city :

"Best wishes for successful convention. Sorry I cannot be with you."

THE PRESIDENT : The next business in order will be the nomination of officers for the coming year. The usual form is to nominate the president first by calling the groups in rotation, and the chairman of each group placing in nomination the candidate his group prefers. If there is no objection we will proceed with that order at the present time. I call upon Group I for its nominee for the office of president of the association for the coming year.

E. C. McDUGAL, of Buffalo : Group I has no candidate to present from within its own ranks, but it takes pleasure in placing in nomination for the office of president the name of J. H. DeRidder, of Saratoga Springs.

THE PRESIDENT : Mr. Brewster, chairman of Group II is not present, and I do not see any one here to speak for that group. I therefore call upon Group III.

The nomination of Mr. DeRidder was then seconded as follows : by E. O. Eldredge, of Oswego, on behalf of Group III ; E. S. Tefft, of Syracuse, on behalf of Group IV ; Willis G. Nash, of Albany, Group V ; Edward Elsworth, of Poughkeepsie, on behalf of Group VI ; Hiram R. Smith, of Rockville Center, on behalf of Group VII, and A. H. Curtis, of New York, on behalf of Group VIII.

THE PRESIDENT : Mr. DeRidder having received the unanimous nomination of the convention, will to-morrow, according to our rules, be elected president of the association for the ensuing year.

Nominations for vice-president are now in order.

E. C. McDUGAL, of Buffalo : Group I has no candidate for vice-president, and desires to place in nomination a member of Group VIII—Mr. Lewis E. Pierson, Vice-President of the New York National Exchange Bank.

THE PRESIDENT : Group II. (No response.) Group III.

E. O. Eldredge, of Owego, on behalf of Group III heartily seconded the nomination of Lewis E. Pierson, for vice-president, as did also the following : E. S. Tefft, of Syracuse, Group IV ; Willis G. Nash, of Albany, Group V ; Edward Elsworth, of Poughkeepsie, Group VI ; Hiram R. Smith, of Rockville Centre, Group VII, and A. H. Curtis, of New York, on behalf of Group VIII.

THE PRESIDENT : I am glad to announce the unanimous nomination of Lewis E. Pierson for vice-president of the association. Now make your nominations for secretary.

F. E. LYFORD, of Waverly : I desire to place in nomination a man who has served the association in former years as secretary, one who is extremely well qualified for the position, and who by virtue of his office as chairman of Group III cannot—modestly, of course—speak for himself ; and, as I am taking his place away from him, I would like to nominate for secretary Mr. E. O. Eldredge, of Owego.

E. S. TEFFT : Group IV takes very great pleasure in seconding the nomination of Mr. Eldredge for secretary of this association.

WILLIS G. NASH : Group V also seconds the nomination of Mr. Eldredge.

F. E. LYFORD : Mr. President, do not forget Groups I and II.

THE PRESIDENT: I had forgotten them, but our secretary informs me that it will hardly be necessary to call them, as they are undoubtedly for Mr. Eldredge.

The nomination of Mr. Eldredge was further seconded by Edward Elsworth, of Group VI; Hiram R. Smith, of Group VII, and A. H. Curtis, of Group VIII.

THE PRESIDENT: I am pleased to announce that Mr. E. O. Eldredge has received the unanimous nomination for secretary of the association.

The nomination of treasurer is next in order.

E. C. McDUGAL: It is with the greatest reluctance that Group I sees the last chance slipping away from it; but, nevertheless, I take pleasure in placing in nomination for the office of treasurer of this association Mr. David Cromwell, of White Plains.

E. O. ELDRIDGE, of Group III; E. S. Tefft, of Group IV, and Willis G. Nash, of Group V, seconded Mr. Cromwell's nomination.

EDWARD ELSWORTH: I am very glad to have the privilege of seconding the nomination of Mr. Cromwell. He is a very distinguished member of Group VI; he has been its chairman, and has always been very active in the affairs, not only of the group, but of the association at large. I do not recall a single meeting of our group, nor a convention of the association, that he has failed to attend.

HIRAM R. SMITH, of Group VII, and A. H. Curtis, of Group VIII, also seconded the nomination of Mr. Cromwell.

THE PRESIDENT: This is another unanimous nomination. I declare Mr. David Cromwell, of White Plains, the unanimous choice of this convention for treasurer, and I want to say that I compliment the members here present for the happy selection they have made. I desire also to say that every one of the gentlemen nominated this morning has been active and efficient in the work of the association, and it is a fitting reward that they are now to be elected as its administrative officers.

Next in order will be the report of the council of administration.

REPORT OF THE COUNCIL OF ADMINISTRATION.

Since the last convention there have been three meetings of the executive council. The first was held at the Fort Orange Club, Albany, January 21, 1908, president Griswold, presiding; the other officers present, and each group represented, with the exception of Group I.

The group chairmen reported successful meetings in their own groups, and that the same were in very good condition. The question of admitting trust companies to membership was very fully discussed, and a resolution was adopted requesting the various groups to consider the question and report thereon before recommendations be made by the council to the association.

A resolution was adopted that the council recommend to the convention the admittance of branch banks to membership in the association upon the payment of minimum dues, and that their membership be without vote.

A resolution was adopted for the appointment of a committee consisting of Edward Elsworth, of Poughkeepsie, chairman, and T. Ellwood Carpenter, of Mt. Kisco, to consider the present bankruptcy law.

Saratoga was selected as the place for the State convention to be held early in September, and a committee of arrangements was appointed consisting of J. H. DeRidder, Saratoga Springs, chairman; E. S. Tefft, Syracuse; Elliott C. McDougal, Buffalo; E. O. Eldredge, Owego, and Lewis E. Pierson, New York city.

The second meeting was held at the Montauk Club, Brooklyn, New York, July 29, President Griswold presiding; all other officers present, with the exception of T. Ellwood Carpenter, secretary, and all groups represented excepting Groups I and II. At this meeting the committee on arrangements for the State convention were also present by invitation.

President Griswold read letters from Mrs. T. Ellwood Carpenter, wife of the secretary, relating to his illness; and Lewis E. Pierson was, upon motion, elected acting secretary, pending the recovery of Mr. Carpenter or the election of a secretary at the coming convention.

The group reports were then received upon the proposition to admit trust companies to membership, as follows: Groups I and II absent; Group III, favorable, provided trust companies admitted carried the same cash reserves as banks; Group IV, same; Group V, opinion divided, some members of the group favoring a trust company section, similar to that existing in the American Bankers' Association; Group VI, favorable, provided trust companies admitted carried the same cash reserves as the banks, and suggesting that legislation be enacted imposing reserve requirements upon all trust companies in the State; Group VII and Group VIII, favorable, provided trust companies admitted carried the same cash reserves as banks.

Upon motion, it was thereupon resolved that the council of administration recommend that the New York State Bankers' Association welcomes to membership such trust companies in the State as carried the same cash reserves as now required of State banks.

Upon motion, it was resolved that this council, recognizing the necessity of currency reform, and when as banking conventions in other States have appointed committees and requested that a committee be appointed from this State to consider this subject, it was recommended that the convention appoint A. B. Hepburn, Vice-President Chase National Bank, New York; Edward Elsworth, President Poughkeepsie Savings Bank, Poughkeepsie; Elliott C. McDougal, President Bank of Buffalo, Buffalo; Henry C. Brewster, President Traders' National Bank, Rochester, and the president of the association as a committee who, upon invitation, shall confer and act with committees from other States to secure some definite action upon this subject at the next session of Congress.

Upon motion it was resolved that the council recommend to the convention that a committee of three be appointed to act with committees from other States to secure action that will bring back to the banks throughout the country the exchange business now being handled by the express companies and post offices at banking points.

Upon motion, it was resolved that the council of administration recommend to the State association the consideration of some action which would discourage the payment of interest on daily balances on individual deposits.

The third meeting was held at the Grand Union Hotel on Wednesday evening September 9, 1908. The minutes of the last meeting were read and approved.

All the groups were represented by their respective chairman except Group II. The report of the council was read and approved for presentation to the convention, as were the reports of the secretary and treasurer.

A letter was read from Secretary Carpenter, stating his probable inability to attend the convention owing to continued illness, and a vote of regret and sympathy was passed and the secretary of the association directed to transmit the same and express the thanks of the council to Mr. Carpenter for his valuable services and the high esteem in which he is held by the members of the association.

A vote of thanks was also tendered to Lewis E. Pierson for his able services as acting secretary of the association since Mr. Carpenter's illness, without compensation. The meeting then adjourned.

On motion, the report was received and adopted.

THE PRESIDENT: The matters brought up in this report are now before the convention. Upon one of those subjects we are fortunate in having with us to-day a man who has given it a great deal of attention, and who has come a long ways to speak to us upon the question of "Bank Money Orders." I have great pleasure in

introducing Mr. Joseph Chapman, Jr., Cashier of the Northwestern National Bank, of Minneapolis, and also the secretary of the Minnesota Bankers' Association.

BANK MONEY ORDERS—ADDRESS OF JOSEPH CHAPMAN, JR., CASHIER NORTHWESTERN NATIONAL BANK, MINNEAPOLIS, MINN.

Mr. President and Gentlemen of the New York State Bankers' Association—It is a matter of no small wonderment and surprise that it should be necessary at this time to discuss in a bankers' convention the subject of the transmission of the people's money from one point to another by means of bank money orders. It is one of the functions of banks to transfer money, whether in sums of \$1.00 or \$10,000, the same as it is the function of a bank to loan money. Owing, however, to the comfortable profit derived in the past from the interest and discount department of the banking business, we have allowed the sale of exchange to drift almost entirely from banking channels into the hands of the Government and the express companies, and are only now becoming aware of the fact that we have given a profitable part of our business to the Government and corporations, to both of which the transmission of money is a comparatively recent innovation. We are rapidly passing from a period where we can expect large profits from a small volume of business into an era of large volume of business with decreased earnings, and we must make every branch of our business pay. This is true not only of our profession, but manufacturers and business men generally throughout the country have accepted this as a fact. For instance, the lumber manufacturers of my own city now make nearly all their profit out of what was formerly waste material, which they either dumped into the river or used as fuel.

I do not propose to enter into any tirade against the Government and express companies for their action in this matter; but wish rather at this time to pay tribute to the farsightedness and executive ability displayed by them in building up their money-order departments. It is no credit to us as bankers that we should have to sit at the feet of those outside of our own profession and learn from them how to transact our own business. But we must swallow this pill, however bitter, if we expect to serve the people as trustees of their savings and working capital to the full extent of our privilege and ability, for it is just as necessary that funds be transferred from one point to another as it is that the people have a safe place to deposit their money. It is a fact that at the present time a very small percentage of the people's money is transferred by banks.

There are no figures available at the present time to show the volume of business done by the various express companies in the United States, but fortunately we have a report from Mr. Metcalf, of the Post Office Department, in which he states that for the year ending June 30, 1902, the gross earnings of the United States postal money-order department were \$2,789,181.19, being a gain over the previous year of \$339,279.97. Its expenses for the last year were \$999,363.33, showing net earnings of \$1,889,817.86. The commission of three cents per order allowed postmasters at third and fourth-class post offices, amounting to \$772,901.82, is included in the item of expenses. Adding to this the net earnings, the money-order department would show a profit in the business for the year of \$2,662,719.69. It also has the use of \$2,500,000 more for unclaimed orders issued and not presented for payment, and there has been no report of an addition made to this fund since October, 1900. The money-order department of the post office transferred during the past year \$396,526,752 in different sums, averaging \$7.75 each, and the department estimates that it will issue nearly fifty million orders this year, or ten million in excess of last year.

We also find from Mr. Metcalf's report that the plan of allowing orders to be sold by rural free delivery carriers, while as yet only in an experimental stage, is a success, for during the past year 625,946 applications were received under this system.

In addition to the exchange received, the post office and express companies have the use of millions of dollars, on which they absolutely pay no interest and on which they in turn are allowed interest by the banks in the money centers. You can get some idea of what this amounts to from the fact that the Bankers' Money Order Association of New York City has recently offered to furnish all blanks and all advertising matter absolutely free, the banks selling their money order to keep all exchange received from the sale thereof, remitting the association once a week for the face of the drafts. This association is not in business for its health, and should their plan work successfully, I have no doubt that they would have from ten to fifty millions on deposit or at their disposal all the time, and by loaning this they could make a handsome profit.

It is hard for us as business men to think of these vast transactions of the Post Office Department, which, as I believe, represent only about one-half of the money-order business in the United States, originating in institutions which are chartered to carry parcels and mail, leaving all the emoluments at the counters of Uncle Sam's post offices and the various express companies and nothing for the bankers, who have fully 90 per cent. of the work to per-

form in connection with the mission of the innocent-looking money order. In other words, "Jones pays the freight," and our name is Jones.

Solomon must have had the banking fraternity in mind when he uttered his famous ant proverb: "Go to the ant, thou sluggard; consider her ways and be wise; which having no guide, overseer or ruler, provideth her meat in the summer and gathereth her food in the harvest. How long wilt thou sleep, O sluggard? When wilt thou arise out of thy sleep?"

Is this a subject which is of interest to us as bankers? If so, is it not time to abandon useless talking and railing against the Government and express companies and cast about for some practical plan to reclaim our full share of this immense business? The competition from the Government is going to become more fierce as the years go by, as is shown by its efforts to accommodate the people with a money order sold at their doors by the rural free delivery carriers.

I should not waste your time nor mine did I not see the possibility of the reclamation of the money-order business through united action on the part of the bankers throughout this country.

In the first place, as practical business men let us decide to put a little of our energy into work and not all into talk. In looking over the reports of the American Bankers' Association and the different State associations, I have become convinced of the fact that our principal trouble up to date is that we have approached the subject from an impractical point of view. The addresses and talks have accomplished about as much result as did the darkey minister, about whom an old colored lady said on the morning following his first sermon, when she met another Aunt who had been detained from service and inquired as to what kind of a minister he was and what he preached about: "Oh, law; I dunno what he said, but you could 'a heard him holler mo'n a mile."

It is a waste of time and energy to talk about imposing a banking tax upon the different companies issuing express orders, as discussed at the last three meetings of the American Bankers' Association, for even should we accomplish this, after the course of some twenty or twenty-five years of diligent effort in Congress, we would still have our principal competitor, the Government, who would be entirely exempt from any taxation which any banker might devise. We must adopt the methods employed by the Government and express companies in building up their money-order business, if we wish to make a success of bank money orders.

Their first advantage arises from the fact that the Government and each express company has a chief executive who directs the work throughout the United States. As a result of this centralization of authority and power, his assistants are enabled, through the agencies of the magazines, mail-order houses, catalogue houses and jobbing firms, to flood the country with advertising matter which goes into the homes of millions of our people, until they have come to the conclusion that only three things are necessary to their complete welfare and happiness while on earth, namely, Uneda biscuit, a bottle of Omega oil and a post office or express money order.

The post office money order is known from New York to California, and from Texas to Minnesota. The American Express order is known not only in this country, but is more popular abroad than many of our best banking firms' letters of credit, and so aggressive have the express companies become that they are now the most active competitors that the bankers of this country have in the purchase of foreign bills, thus showing that it is their intention not only to corral the domestic money-order business, but to reach out and dominate exchange matters with our foreign neighbors.

While the banker, good, simple easy soul, employs his time cashing and forwarding these orders, the entire force of the express and post office money-order departments is absorbed in issuing the orders and shipping the actual cash out of the country, where it is needed for current business, to the city, where it is not needed, to be in turn reshipped back to our busy friend, the banker, at his expense. This performance is repeated daily, and it may be that the express companies figure that it would be too much of a monopoly did they both sell and cash these orders, and for that reason do they share their labor but not their profits with us.

As compared with the Government and express companies with one executive head, we have over 17,000 banks in the United States, in which you will find as many different ways of doing business. For instance, you will find some bankers who do not believe in issuing drafts at all, but encourage their customers to use personal checks or go to the post office or express companies to buy their exchange, as they do not care to be bothered with the book-keeping. In others you will find no charge made for exchange furnished the customers, and in still others you will find a nominal and in others an exorbitant charge.
